

12th International School of Organometallic Chemistry

Organometallic chemistry: new directions and perspectives

The ISOC series is the most important school on organometallic chemistry at the European level, organized by Camerino University under the auspices of the Interdivisional Group of Organometallic chemistry of the Italian Chemical Society. The aim is to encourage the presence of young researchers and Ph.D students both from University and Industry, including those not directly involved in organometallic research projects. The meeting and the contamination of young researchers with distinguished European scientists is an important contribution to the world goal of increasing the transfer of knowledge at a high level between different European countries and different generation of scientists.
