Why Size Matters: from antibodies to nanomaterials

Professor Marina Resmini – Inaugural Lecture

*Wednesday 3rd February 2016
6.30pm*

Advances in the area of nanotechnology have allowed scientists to manufacture and manipulate ever smaller 'particles' and to study how size impacts their properties. The majority of vital biological processes in the body occur at the nanoscale and we now have particle systems that can interact at the same level.

This lecture will highlight some of the interesting applications, especially in the area of drug delivery.

*Tickets are free but you must register to attend:
www.qmul.ac.uk/events*

*Skeel Lecture
Theatre,
People's Palace,
Mile End Campus,
Queen Mary
University of London,
E1 4NS*
