

An aerial view of St Anne's College in Oxford, showing its historic stone buildings, red-tiled roofs, and a central courtyard with a green lawn and trees.

# European Regulatory Toxicology Conference

## The Regulatory Acceptance of Alternatives to Animal Testing

The European Regulatory Toxicology Conference, with specific focus on the regulatory acceptance of alternatives to animal testing, is coming to St Anne's College, Oxford on 24 May.

With a move in the European regulatory environment to animal testing being the action of last resort, this is a relevant and informative event in an area of interest for those involved with the regulation of chemicals, biocides or agrochemicals.

Topics include an overview of alternative test methods, skin and eye irritation, skin sensitisation, carcinogenicity and mutagenicity, in silico methods and future initiatives to replace animals in regulatory testing.

There will be plenty of opportunity to network with colleagues and expert speakers and it will appeal to all stakeholders in the regulatory field from active substance manufacturers, formulating and retailing companies, regulatory authorities and the full range of service companies (law firms, consultants, laboratory service providers).

Confirmed topics and speakers include:

**Keynote Presentation: An overview of animal test alternatives (history and current status)**

Fiona Sewell (NC3Rs)

**3Rs in regulatory toxicology testing of agrochemicals**

Dr. Manoj Aggarwal (Dow AgroSciences Ltd)

**In silico methods**

Professor Mark Cronin (Liverpool John Moores University)

**MOA, absorption, metabolism in vitro methods**

Dr. Nick Plant (University of Surrey)

**The future for replacing animals in regulatory tests**

Katy Taylor (Cruelty Free International)

Further information on the programme and speakers will be available soon.
