

Networked Pharma

A new model for drug discovery & development

'Funds & Fundability'

The ecosystem for drug discovery is changing rapidly, as approaches to both financing and accessing innovation evolve. Big Pharma is moving away from discovery research towards out-sourcing and in-licensing innovation whilst traditional VCs are becoming more selective. The result is that a perceived gap is opening in the early stage funding landscape for biotech companies. Funds with "patient capital", including the strategic CVCs, are moving to fulfil the funding need, along with Angels groups, Government initiatives, Research Councils and Charities. Most recently, the dynamic change continues as charity and Big Pharma backed VC funds appear. In parallel new approaches to accessing innovation emerge with discovery-CRO strategic alliances, Open Innovation, crowd sourcing and the embedding of Pharma staff within Universities. Navigation within this system has become complex!
