## General Information

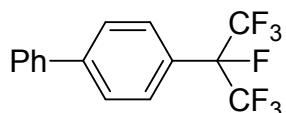

Melting points were measured on a Melt-Temp apparatus and were uncorrected.  $^1\text{H}$  NMR spectra were recorded in  $\text{CDCl}_3$  on a Bruker AM-300 spectrometer (300 MHz) with TMS as internal standard.  $^{19}\text{F}$  NMR spectra were taken on a Bruker AM-300(282 MHz) spectrometer using  $\text{PhCF}_3$  as external standard.  $^{13}\text{C}$  NMR spectra were taken a Bruker AM-400(100 MHz) spectrometer.  $^1\text{H}$  NMR data are reported as follows: chemical shift, multiplicity (s = singlet, d = doublet, t = triplet, q = quartet, hept = heptet, dd = doublet of doublet, m = multiplet, etc.), integration, and coupling constants (Hz).  $^{13}\text{C}$  NMR data are reported in parts per million (ppm) on the  $\delta$  scale. IR spectra were obtained with a Nicolet AV-360 spectrophotometer. Mass spectra and elemental analyses were recorded in this institute. Solvents were purchased form commercial sources and purified before used by standard procedures. Unless otherwise specified, all reactions were carried out under a nitrogen atmosphere in a flame-dried Schlenk tube and magnetic stirring. TLC analysis was performed on silica gel plates, column chromatography over silica gel (mesh 300-400) and petroleum ethyl acetate combination was used as the eluent.

## General procedure for heptafluoroisopropylation of various arylboronic acid derivatives

**Preparation of heptafluoroisopropyl silver reagent:**<sup>1</sup> to 0.2 mmol of silver fluoride in  $\text{CH}_3\text{CN}$  was added 0.2 mmol of HFP as a gas in 0.5h at rt. When all the solid disappeared, a clean solution was obtained, which was used in the next step directly.

**General procedures for preparation of heptafluoroisopropylated arenes:** after removing solvent of the above solution by evaporation, 2 ml of DMF was added. 5 mins later, 0.2 mmol of CuOAc was added, and 0.1 mmol of arylboronic acid and 50 mg of 4 $\text{\AA}$  MS was added successively. Then the mixture was stirred at rt until the reaction was over. Excess amount of ethyl acetate was added to dilute the solution. Filtered, washed with water, dried, and then concentrated to get the crude product. The crude residue was purified by flash column chromatography (combined solvent ethyl acetate and petrol ether as eluent) to afford the pure product.

### 2b, 4-(perfluoropropan-2-yl)-1,1'-biphenyl

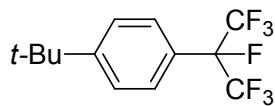

White solid, mp: 89-91 °C;  $^1\text{H}$  NMR (400 MHz,  $\text{CDCl}_3$ )  $\delta$  7.69 (q,  $J$  = 8.7 Hz, 4H), 7.64 – 7.56 (m, 2H), 7.47 (m, 2H), 7.41 (m, 1H);  $^{13}\text{C}$  NMR (100 MHz,  $\text{CDCl}_3$ )  $\delta$  144.02, 139.64, 129.01, 128.21, 127.55 (d,  $J$  = 2.0 Hz), 127.25, 126.18 (d,  $J$  = 10.4 Hz), 125.60 (d,  $J$  = 20.6 Hz), 120.75 (qd,  $J$  = 285.3, 26.4 Hz), 91.65 (dq,  $J$  = 201.8, 31.1 Hz);  $^{19}\text{F}$  NMR (376 MHz,  $\text{CDCl}_3$ )  $\delta$  -75.66 (d,  $J$  = 7.4 Hz), -182.49 (hept,  $J$  = 7.2 Hz); IR (KBr,  $\text{cm}^{-1}$ ):  $\nu$  3078, 1446, 1280, 1218, 1101, 981, 835, 736, 697; MS (EI) m/z (relative intensity) 322 [ $\text{M}^+$ ], 253 (100); HRMS (EI) calcd.
