Temperature Dependence Studies

All temperature dependence studies were performed over the temperature range 15 – 35 °C.

The data was analysed using the Eyring equation shown below.

$$\log_{10}(k/T) = \{10.32 + (\Delta S^\ddagger/R)\} - \{\Delta H^\ddagger/RT\}$$

Where k = rate or equilibrium constant measured at temperature T (°K), R = gas constant and both ΔH^\ddagger and ΔS^\ddagger are in cal.
