## List of Figures

**Figure S1.-** Dispersion of BG (left) and mBG (right) particles at  $t=0$  min (A) and  $t=60$  min (B)

**Figure S2.-** FTIR spectra of mBG (a) and BG (b) particles.

**Figure S3.-** TGA profiles of BG and mBG particles.

**Figure S4.-** Remaining weight of PLLA samples containing 5,10 or 15 vol.% of BG or mBG particles during the isothermal treatment at 210 °C.

**Figure S5.-** Dumbbell-shaped PLLA samples for tensile test containing 5, 10 or 15 vol.% of BG (above) or mBG (below) particles.

**Figure S6.-** Stress-strain curves of PLLA samples containing 5, 10 or 15 vol.% of BG or mBG particles.

**Figure S7.-** FTIR spectra of mBG particles submerged in SBF for 0, 1, 3 and 7 days.
