Figure S1. ^1H NMR spectra of the OH-terminated oligomer **2** (a) and the F-terminated oligomer **3** in CDCl_3

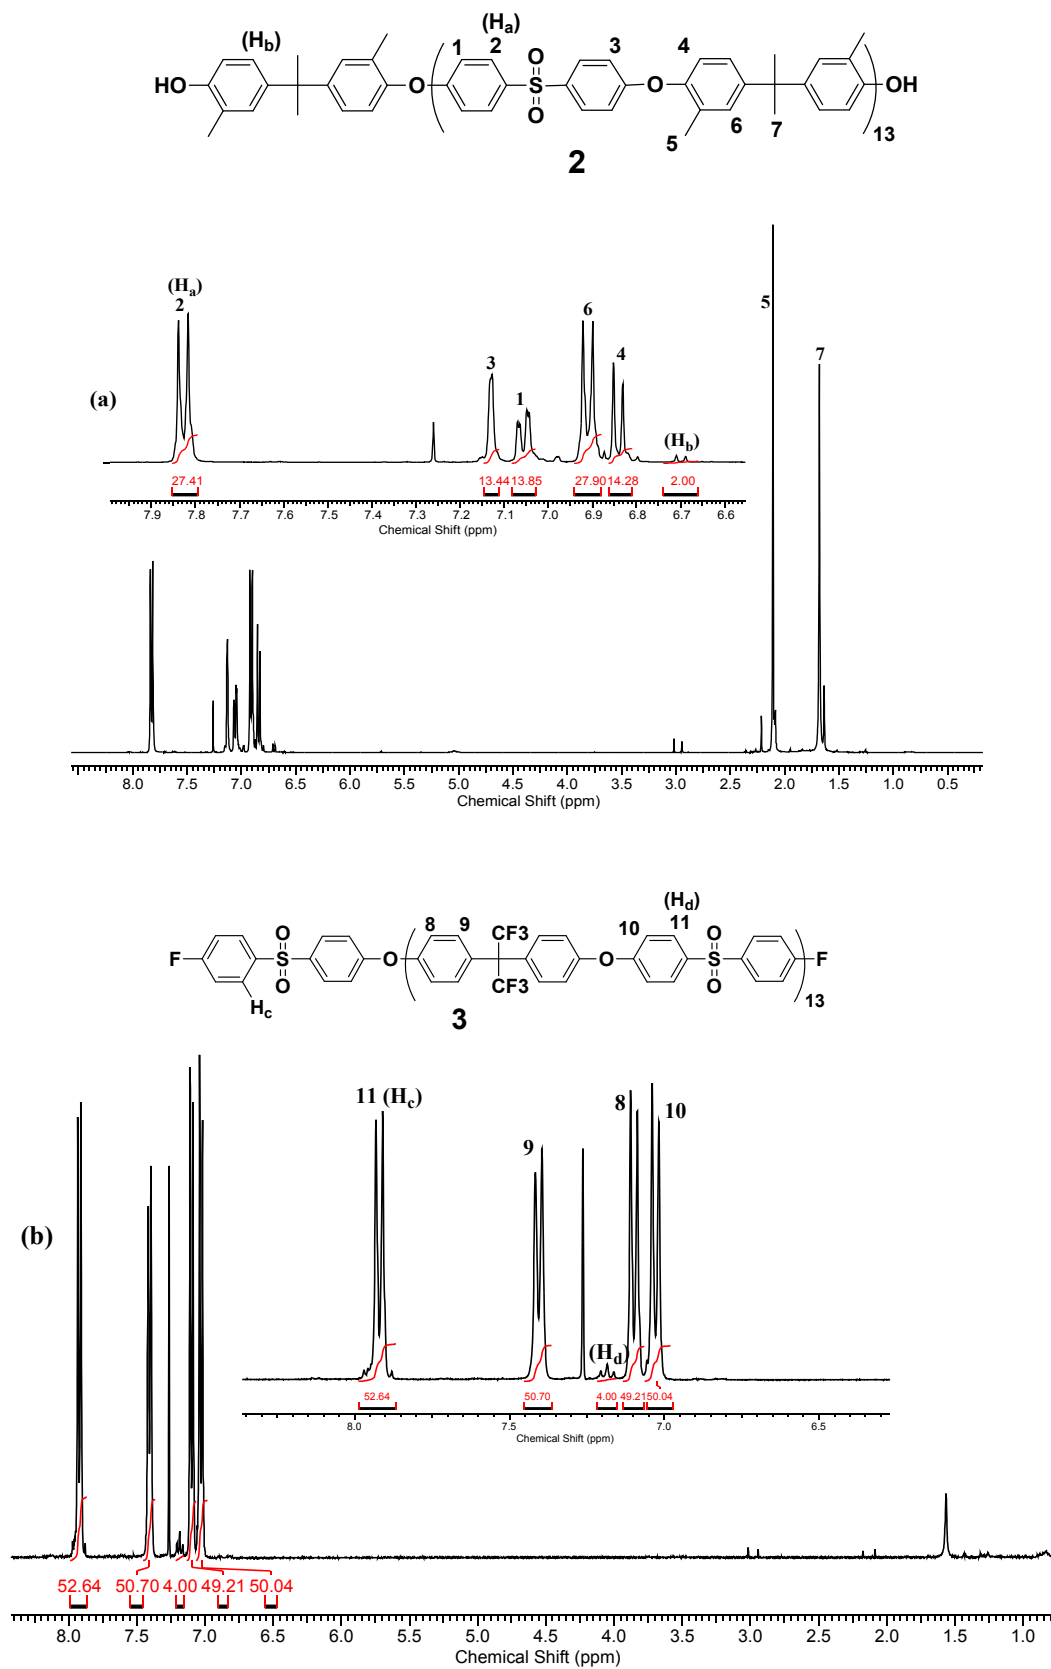

Figure S2. ^1H NMR spectra of the block copolymer **4** and its brominated form **5** in CDCl_3

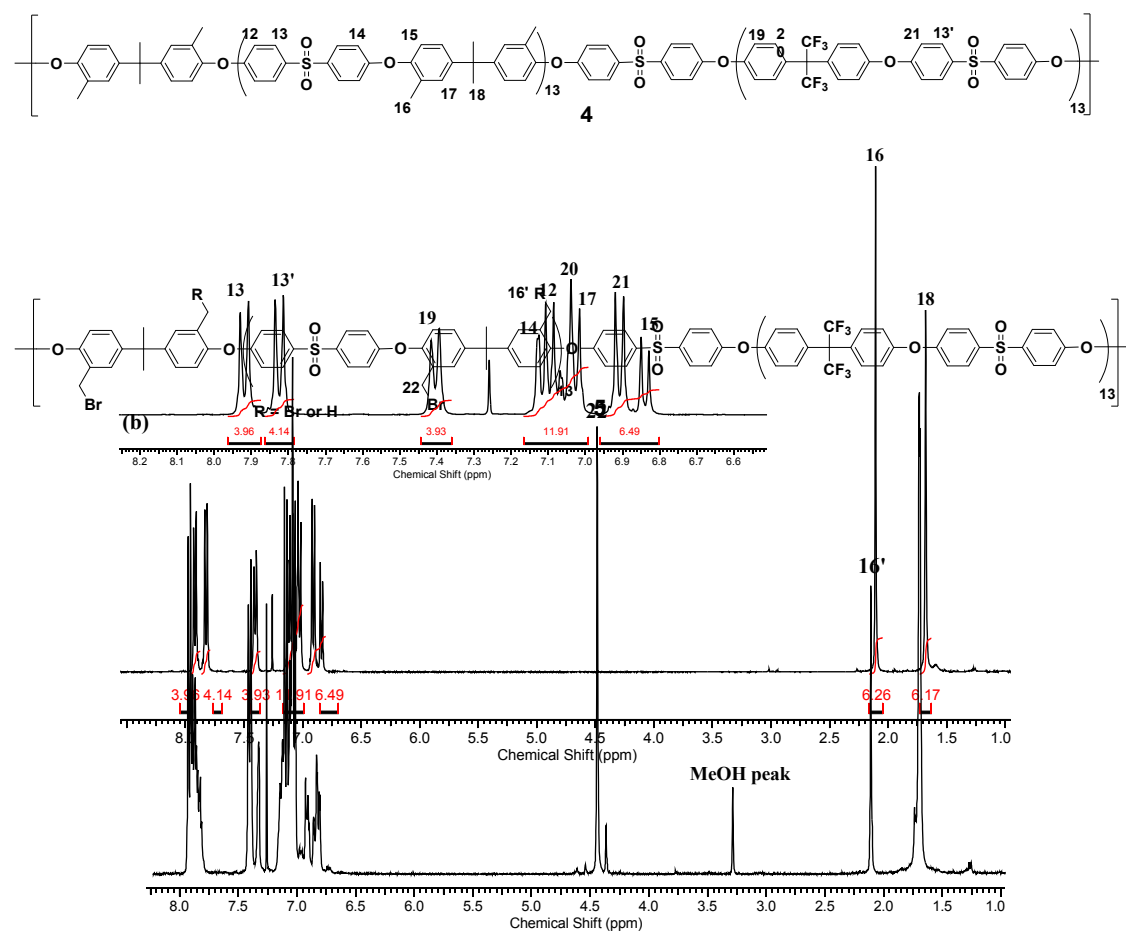

Figure S3. Representative Nyquist plots of Z'' vs. Z' from AC impedance spectroscopy measurements of AI-PES membranes at 20°C

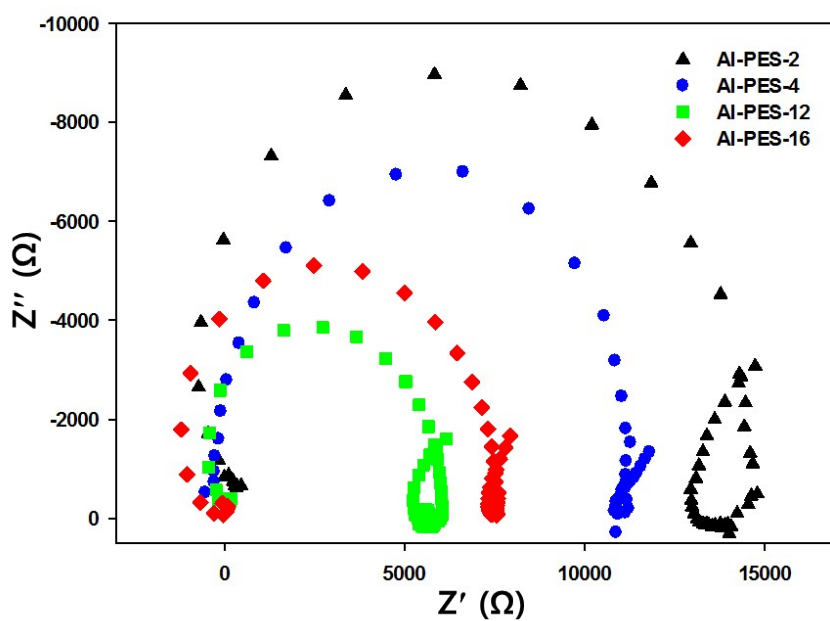

Figure S4. Stress-strain curves of the OH⁻ forms of the AI-PES membranes in the dry state

Table S1. Dimensional stability in the in-plane direction for the AI-PES membranes

Membrane	Δl	
	20 °C	80 °C
AI-PES-2	6.3	15.0
AI-PES-6	3.3	8.3
AI-PES-12	-- ^a	5.0
AI-PES-16	-- ^a	4.0

^aIn-plane swelling was not observed

Table S2. Conductivity and IEC of the AI-PES membranes before and after soaking in 2M NaOH at 60 °C for 500 h

Membrane	Conductivity at 20 °C (mS/cm)		IEC values (meq/g)	
	Before stability	After stability	Before stability	After
	test	test	test	stability test
AI-PES-2	18	- ^a	1.20	- ^a
AI-PES-6	30	25	1.14	1.03 (± 0.03)
AI-PES-12	37	31	1.02	0.88 (± 0.03)
AI-PES-16	32	25	0.92	0.78 (± 0.03)

a: Membrane was broken into pieces

Figure S5. FT-IR spectra of the AI-PES-6 before (a) and after (a'), AI-PES-12 before (b) and after (b'), and AI-PES-16 before (c) and after (c') soaking in 2 M NaOH at 60 °C for 500 h
