2. The changes in charge transfer with increasing interfacial distance

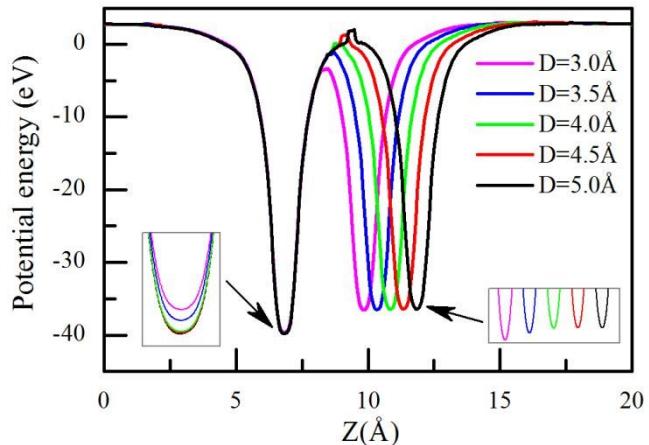

FIG. S1. XY-averaged electrostatic potentials of hybrid g-C₄N₃/graphene bilayer at different interfacial distances D (Å) along the Z direction. Depths of potential wells of graphene and g-C₄N₃ are shown in the inset.

3. The ferromagnetic (FM), antiferromagnetic (AFM) and non-magnetic (NM) configurations

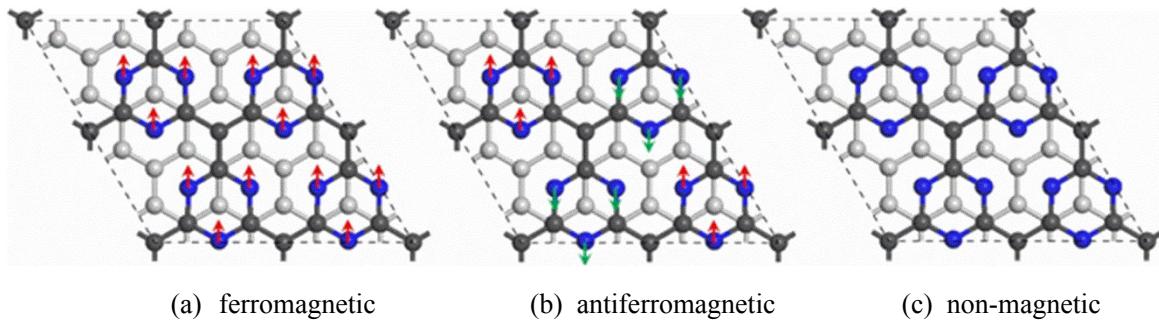

FIG. S2. The equilibrium configurations and local magnetic arrangements for (a) FM, (b) AFM, and (c) NM states.
