## Supporting Information

## Materials Used

Pyrrole was distilled prior to use. All other reagents (Propionic acid- Spectrochem, 2-ethynyl pyridine - Alfa Aesar, 2-bromo pyridine - Spectrochem, LiCl - Spectrochem, $\mathrm{RuCl}_{3} . \mathrm{xH}_{2} \mathrm{O}-$ Alfa Aesar, Solvents - Analytical grade) were of analytical grade and used without further purification. cis- $\mathrm{Ru}(\text { bpy })_{2} \mathrm{Cl}_{2}$ was synthesized according to literature procedure. ${ }^{1}$ Solvents for the electrochemical measurements were distilled from calcium hydride under argon. The compounds were purified using silica gel (60-120 mesh), neutral alumina chromatography.

## Synthesis

5-(4-ethynylphenyl)-10,15,20-tris(3,5-di-tert-butylphenyl)porphyrin (1)
To a solution of pyrrole ( $0.8 \mathrm{ml}, 12.1 \mathrm{mmol}$ ) in $\mathrm{CHCl}_{3}(1.2 \mathrm{~L}), 3,5$-di-tert-butylbenzaldehyde (2 $\mathrm{g}, 9.17 \mathrm{mmol}), 4-\left[\left(\right.\right.$ trimethylsilyl)ethynyl]benzaldehyde ( $0.617 \mathrm{~g}, 3.04 \mathrm{mmol}$ ) and $\mathrm{BF}_{3} \mathrm{OEt}_{2}(1.19$ $\mathrm{ml})$ were added. After stirring the reaction mixture for 1 h at rt , DDQ ( $2.07 \mathrm{~g}, 9.11 \mathrm{mmol}$ ) was added and the mixture again stirred for 1 h . In order to neutralize the acid catalyst, $\mathrm{Et}_{3} \mathrm{~N}(0.5 \mathrm{ml})$ was added and the solution stirred for 10 min . The solvent was evaporated and residue was chromatographed on silica gel with 1:9 ratio chloroform/petroleum ether mixture as eluent. The second band was collected in $17 \%$ yield. The compound ( $528 \mathrm{mg}, 0.516 \mathrm{mmol}$ ) was then
dissolved in $\mathrm{MeOH}-\mathrm{CH}_{2} \mathrm{Cl}_{2}(20 \mathrm{ml})$ solution and $\mathrm{K}_{2} \mathrm{CO}_{3}(91 \mathrm{mg}, 1.63 \mathrm{mmol})$ was added. After stirring at rt for 2 h , the solution was quenched with $\mathrm{H}_{2} \mathrm{O}$, the organic phase was washed with $\mathrm{CHCl}_{3}$ and brine, dried with $\mathrm{Na}_{2} \mathrm{SO}_{4}$ anhydrous, and the solvent was removed in vacuum affording the deprotected porphyrin derivative ( $311 \mathrm{mg}, 62 \%$ ) as a pure red solid.
