

**Cover Page for Supporting Information**

**Manuscript title:**

Impacts of inorganic draw solutes on the performance of thin-film composite forward osmosis membrane in a microfiltration assisted anaerobic osmotic membrane bioreactor

**Author list:**

Taozhan Hu, Xinhua Wang\*, Chen Wang, Xiufen Li\*, Yueping Ren

Jiangsu Key Laboratory of Anaerobic Biotechnology, School of Environmental and Civil Engineering, Jiangnan University, Wuxi 214122, P.R. China

**Total number of pages (including the cover page):**

7 pages

**List of Figures:**

**Page 3      Fig. S1. Variations of water flux of MF membrane in both AnMF-OMBRs.**

**Page 4      Fig. S2. Variations of TOC concentrations in the influent, sludge supernatant, MF and FO permeates in NaCl-reactor (a) and MgCl<sub>2</sub>-reactor (b).**

**Page 5      Fig. S3. Variations of TP concentrations in the influent, sludge supernatant, MF and FO permeates in NaCl-reactor (a) and MgCl<sub>2</sub>-reactor (b).**

**Page 6      Fig. S4. EDX images of new and fouled FO membranes. (a) AL of the virgin FO membrane; (b) AL of the fouled FO membrane in the NaCl-reactor; (c) AL of the fouled FO membrane in the MgCl<sub>2</sub>-reactor; (d) SL of the virgin FO membrane; (e) SL of the fouled FO membrane in the NaCl-reactor; (f) SL of the fouled FO membrane in the MgCl<sub>2</sub>-reactor.**

**Fig. S5.** CLSM images of total cells (SYTO 63), proteins (FITC),  $\alpha$ -D-glucopyranose polysaccharides (Con A) and  $\beta$ -D-glucopyranose polysaccharides (CW) in the FO biofouling active layer. (a) and (b) total cells in the NaCl-reactor and MgCl<sub>2</sub>-reactor, respectively; (c) and (d) proteins in the NaCl-reactor and MgCl<sub>2</sub>-reactor, respectively; (e) and (f)  $\alpha$ -D-glucopyranose polysaccharides in the NaCl-reactor and MgCl<sub>2</sub>-reactor, respectively; (g) and (h)  $\beta$ -D-glucopyranose polysaccharides in the NaCl-reactor and MgCl<sub>2</sub>-reactor, respectively.

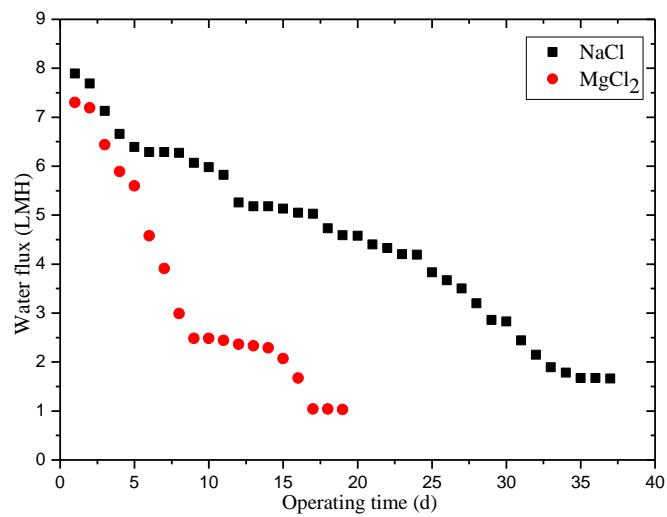

Fig. S1. Variations of water flux of MF membrane in both AnMF-OMBRs.

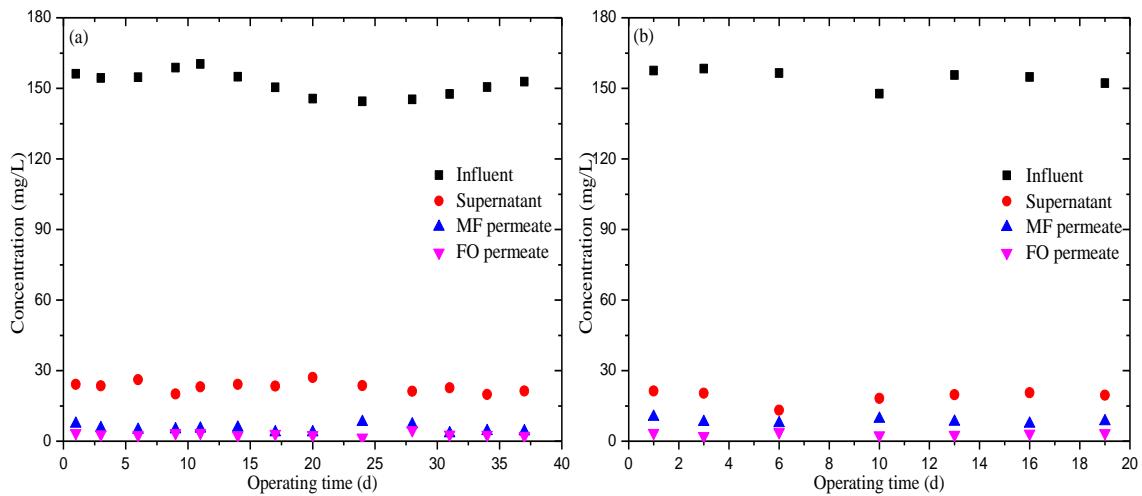

Fig. S2. Variations of TOC concentrations in the influent, sludge supernatant, MF and FO permeates in NaCl-reactor (a) and MgCl<sub>2</sub>-reactor (b).

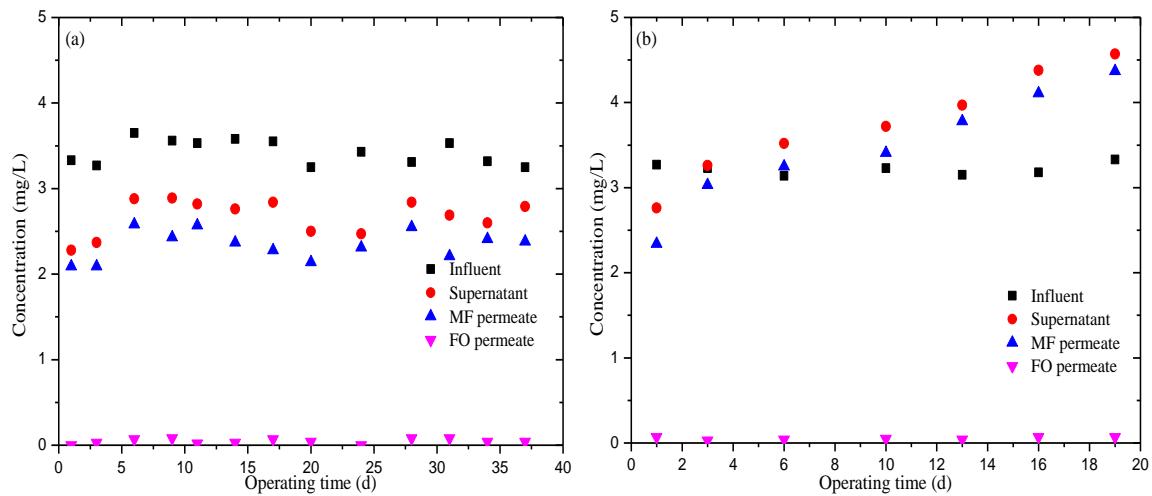

Fig. S3. Variations of TP concentrations in the influent, sludge supernatant, MF and FO permeates in NaCl-reactor (a) and MgCl<sub>2</sub>-reactor (b).

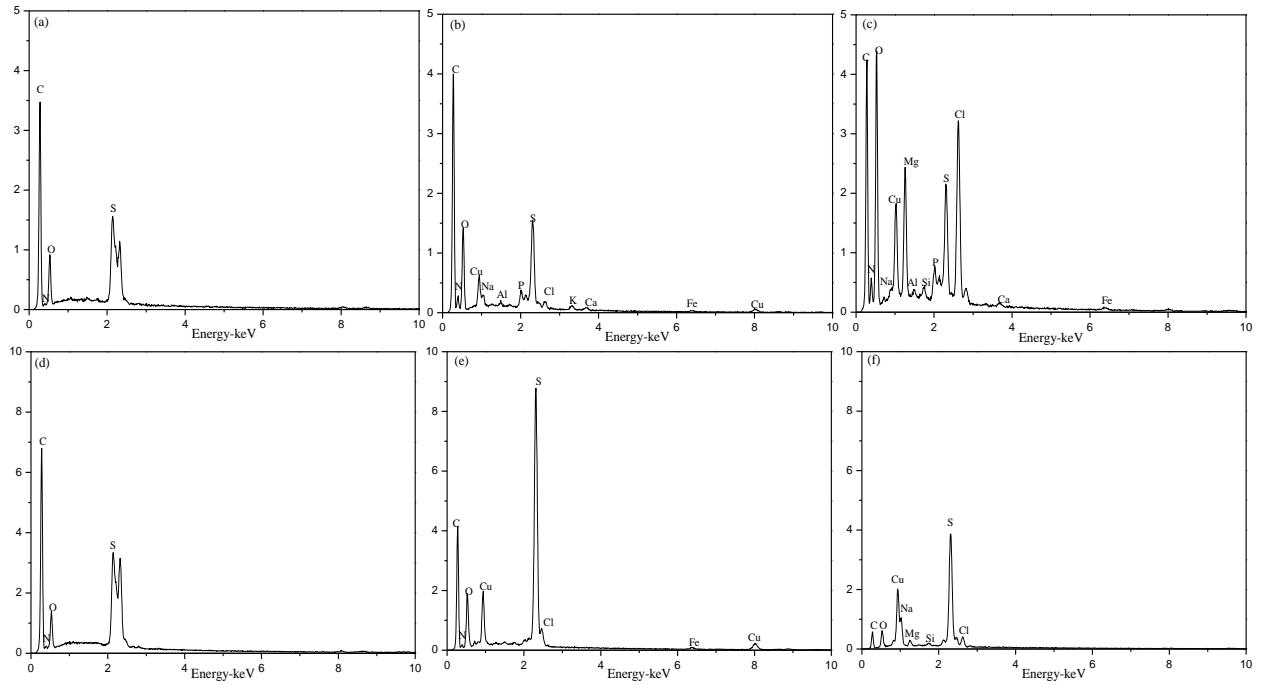

Fig. S4. EDX images of new and fouled FO membranes. (a) AL of the virgin FO membrane; (b) AL of the fouled FO membrane in the NaCl-reactor; (c) AL of the fouled FO membrane in the MgCl<sub>2</sub>-reactor; (d) SL of the virgin FO membrane; (e) SL of the fouled FO membrane in the NaCl-reactor; (f) SL of the fouled FO membrane in the MgCl<sub>2</sub>-reactor.

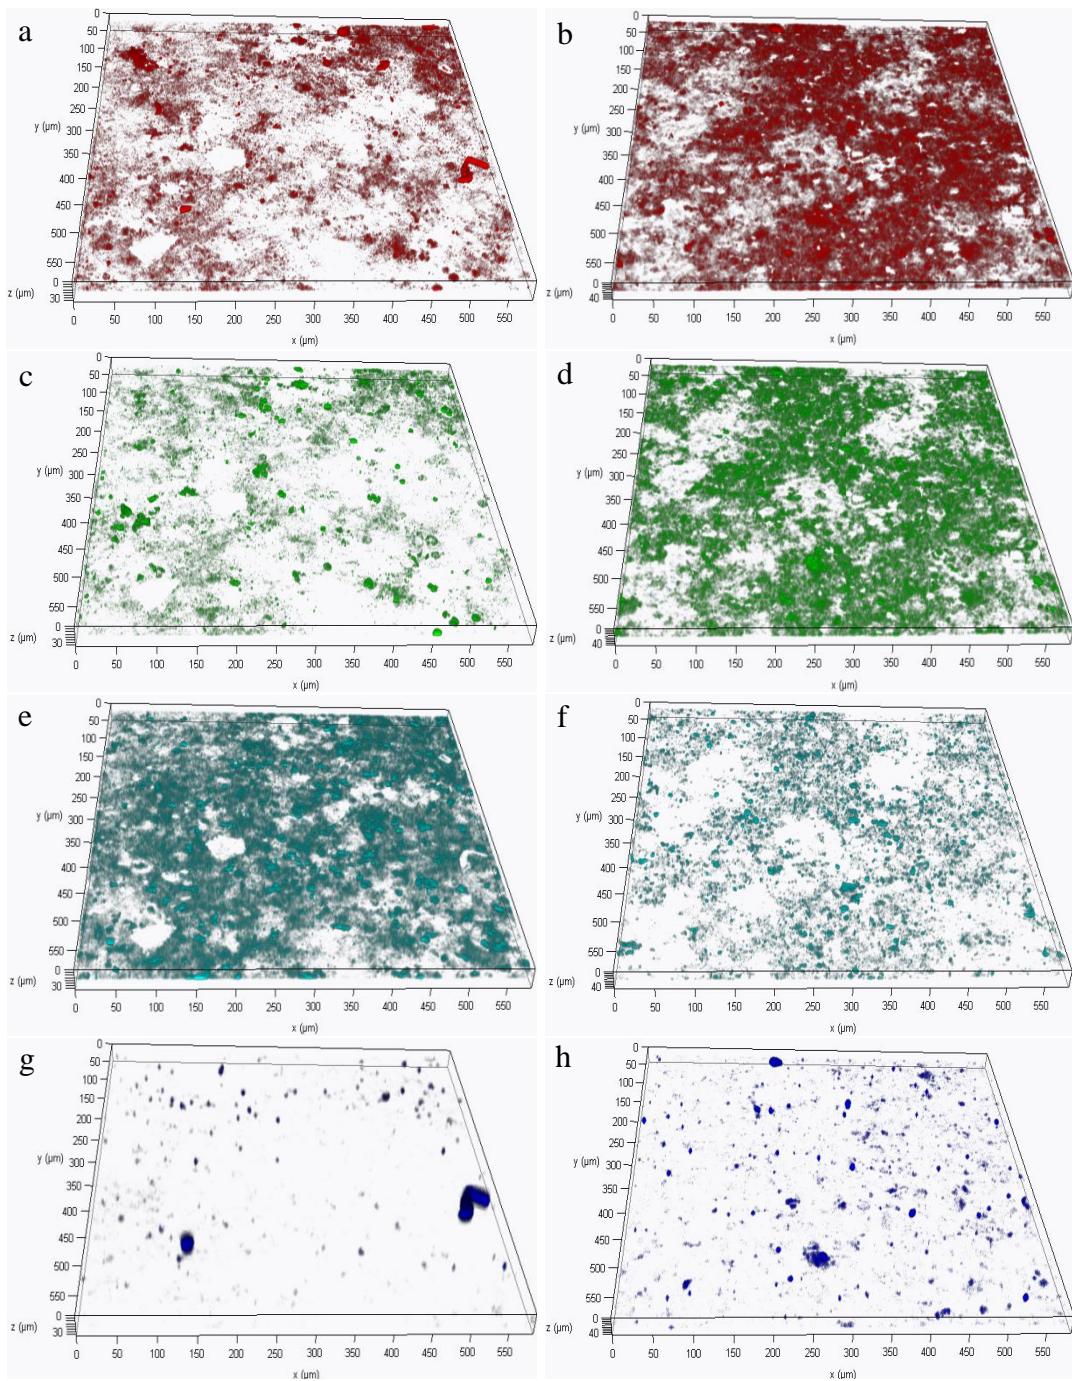

Fig. S5. CLSM images of total cells (SYTO 63), proteins (FITC),  $\alpha$ -D-glucopyranose polysaccharides (Con A) and  $\beta$ -D-glucopyranose polysaccharides (CW) in the FO biofouling of AL. (a) and (b) total cells in the NaCl-reactor and MgCl<sub>2</sub>-reactor, respectively; (c) and (d) proteins in the NaCl-reactor and MgCl<sub>2</sub>-reactor, respectively; (e) and (f)  $\alpha$ -D-glucopyranose polysaccharides in the NaCl-reactor and MgCl<sub>2</sub>-reactor, respectively; (g) and (h)  $\beta$ -D-glucopyranose polysaccharides in the NaCl-reactor and MgCl<sub>2</sub>-reactor, respectively.
