Table S.1

Physical properties of the synthesized KIT-6 without and with the calcination at various temperatures

Sample	Final calcination temperature / °C	S_{BET}^{*1} / m ² g ⁻¹	V_{pore}^{*2}	$V_{meso-pore}^{*3}$	$d_{meso-pore}^{*4}$ / nm
			/ cm ³ g ⁻¹	/ cm ³ g ⁻¹	
KIT-6-as	-	840	1.13	1.02	8.1
KIT-6-400	400	856	1.14	1.01	8.2
KIT-6-600	600	810	1.08	0.95	8.2
KIT-6-800	800	640	0.89	0.81	7.2

*¹ BET specific surface area.

*² Total pore volume: estimated at $0.99P/P_0$.

*³ Pore volume of meso-pores: estimated by the BJH method.

*⁴ Major meso-pore diameter peaks: estimated from adsorption branch by the BJH method.

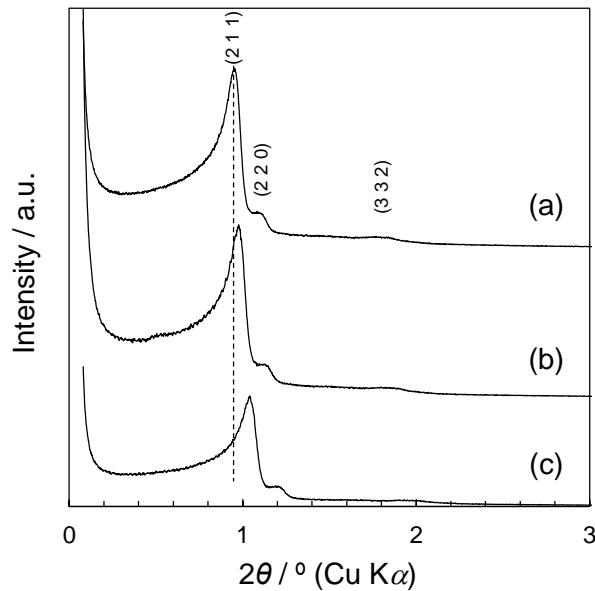

Figure S.1 Small-angle X-ray scattering patterns of the synthesized KIT-6: (a) As-prepared (calcined at 550 °C), with the re-calcination at (b) 600 °C, and (c) 800 °C.

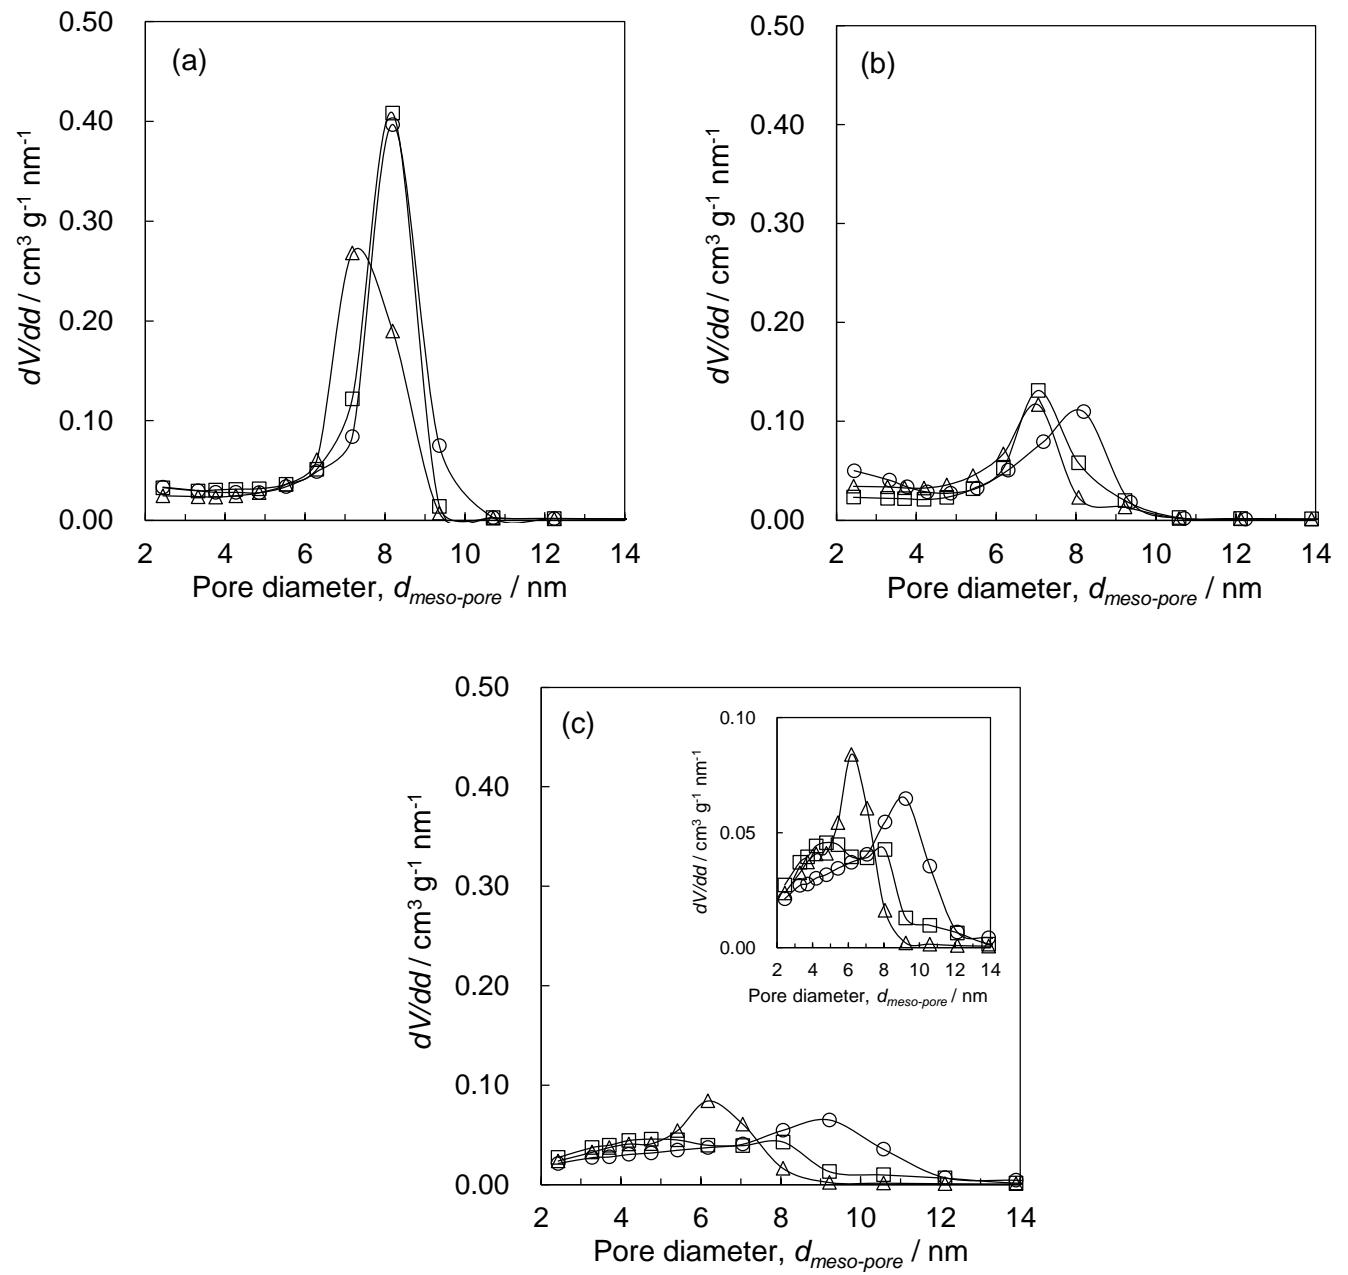

Figure S.2 Pore size distribution by the BJH method of (a) Z20N/K(T), (b) Z50N/K(T), and (c) Z80N/K(T): $T = (\circ) 400, (\square) 600, (\triangle) 800$.

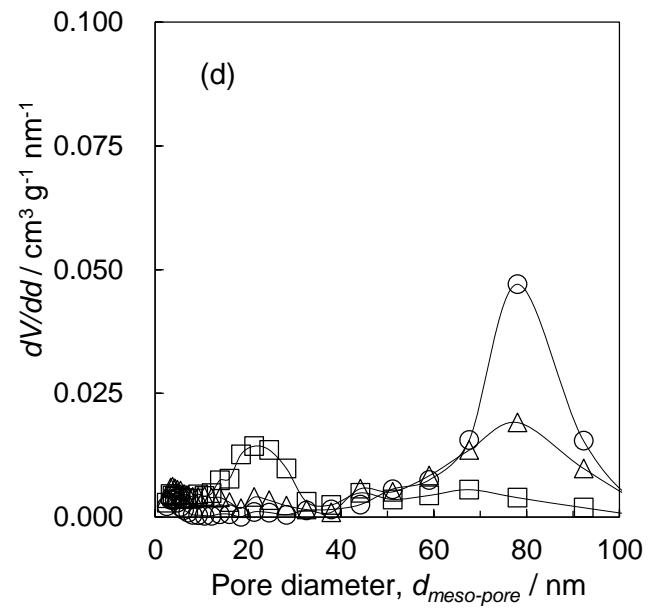

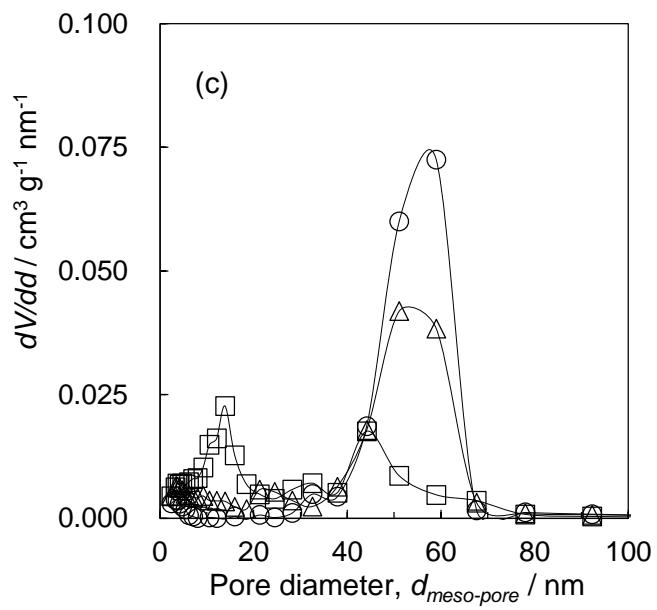

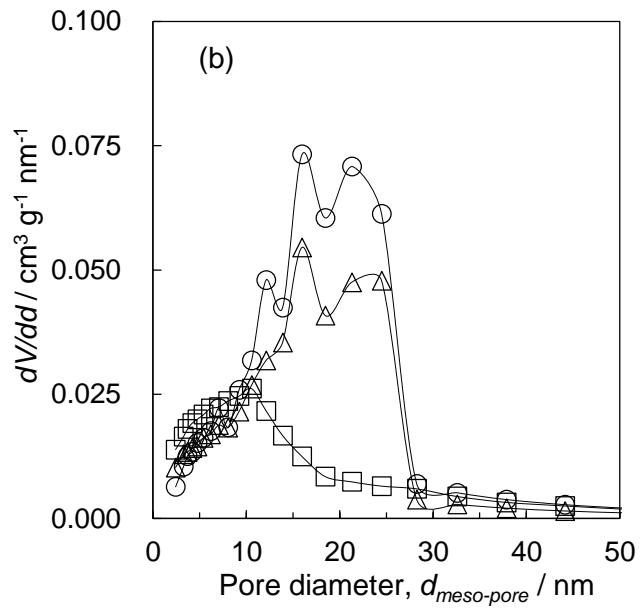

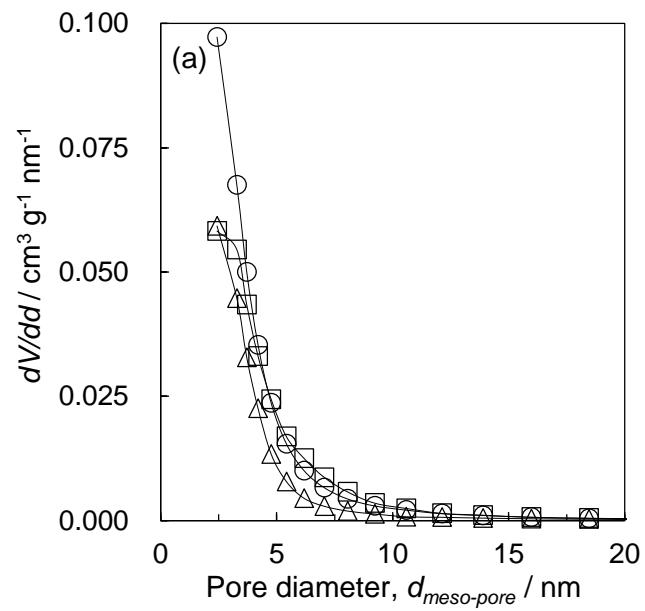

Figure S.3 Pore size distribution by the BJH method of (a) ZZN/Q-3, (b) ZZN/Q-10, (c) ZZN/Q-30, and (d) ZZN/Q-50; X: = (○) 0, (△) 20, (□) 50.

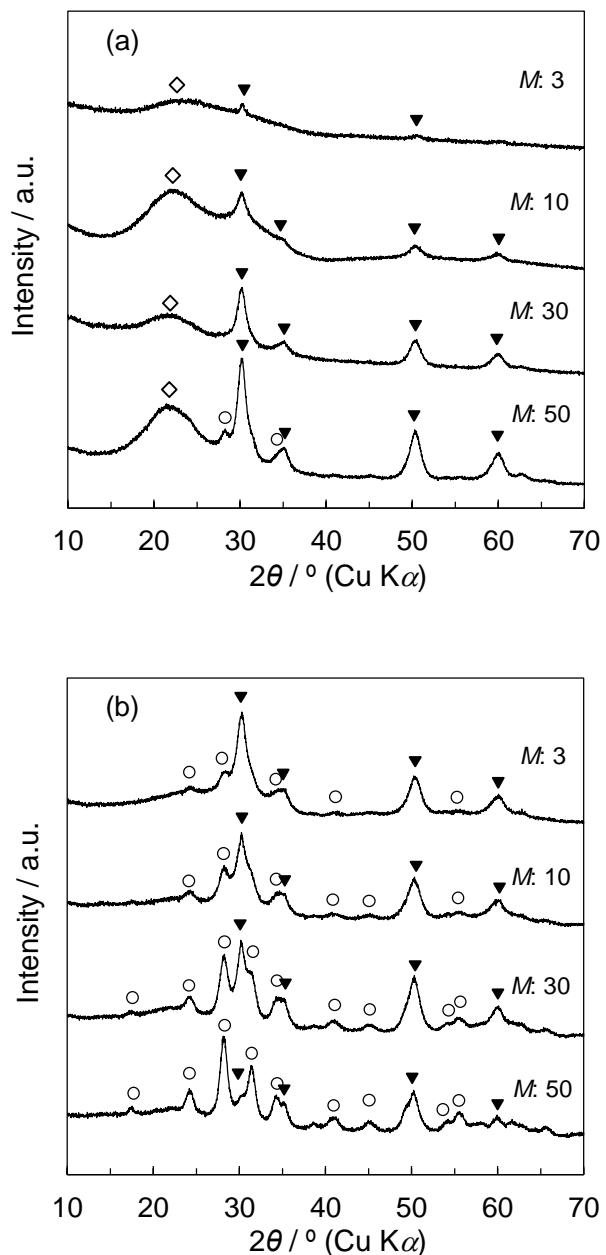

Figure S.4 Wide-angle XRD patterns of the $\text{ZrO}_2/\text{SiO}_2$ composites:
(a) Z20N/Q- M and (b) Z50N/Q- M ; $M: 3, 10, 30, 50$; (\bigcirc) ZrO_2 -monoclinic, (\blacktriangledown) ZrO_2 -tetragonal, (\diamond) SiO_2 .
