

## Supporting Information

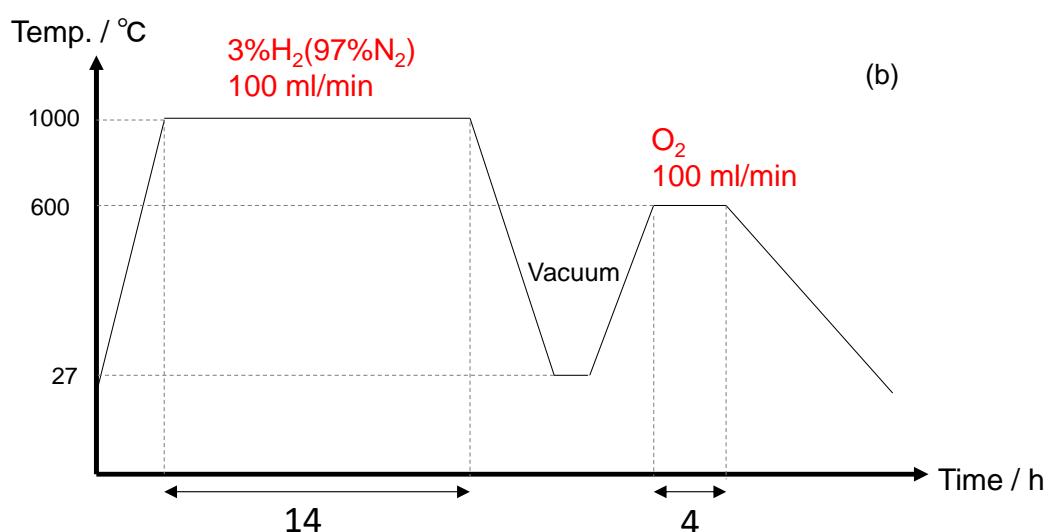

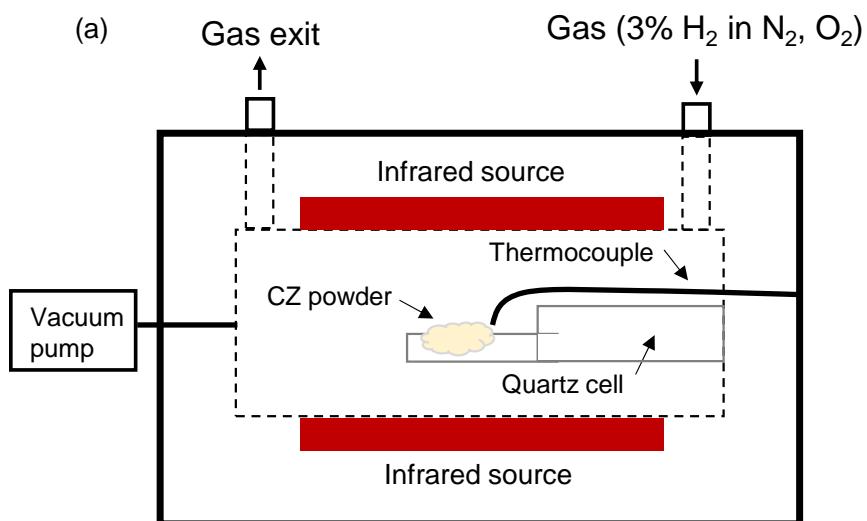

Figure S1. (a) Set-up view of the high-temperature gas furnace, (b) Schematic description of temperature program for redox treatment.

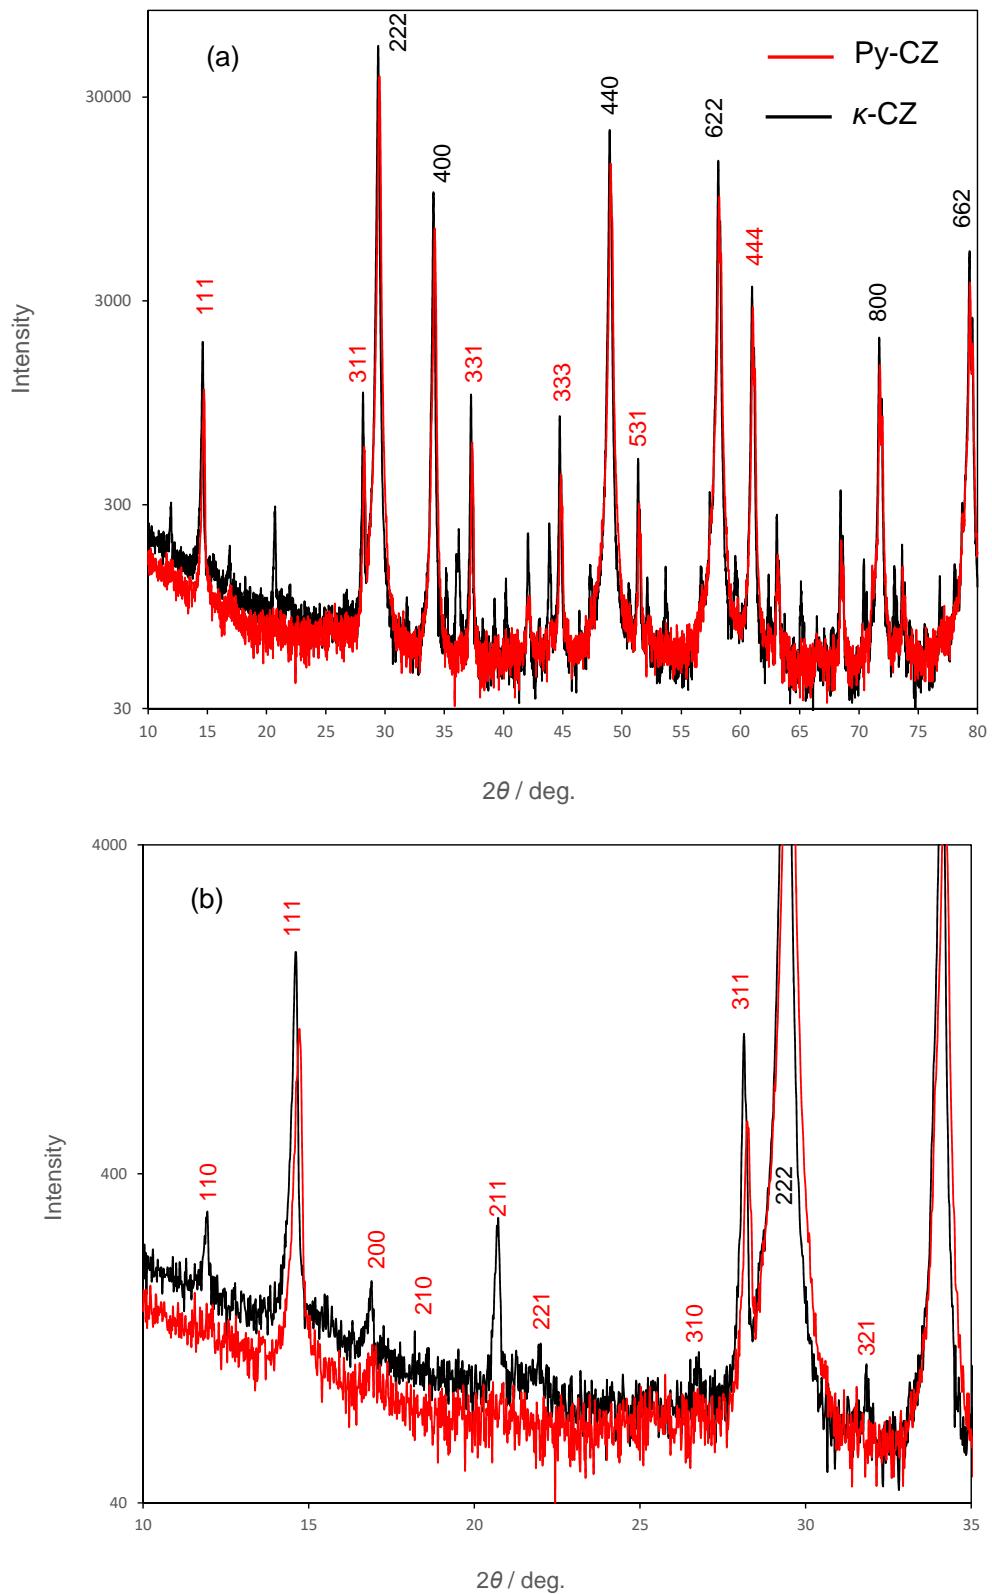

Figure S2. XRD patterns of  $\kappa$ -CZ and pyrochlore-type CZ as a reference: (a)  $10 \leq 2\theta \leq 80^\circ$  (linear scale), (b)  $10 \leq 2\theta \leq 35^\circ$  (log scale).

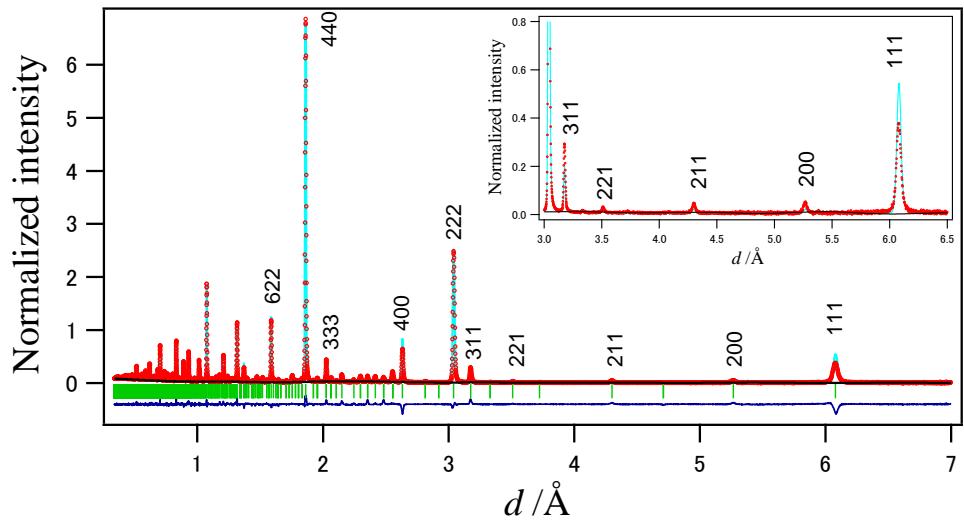

Figure S3. Rietveld refinement patterns of  $\kappa$ -CZ, which was refined by cubic structure (space group  $P2_13$ ). The red “◦” marks, solid light-blue line, green tick marks, and lower solid blue line indicate experimental data, calculated data, Bragg-peak positions of cubic  $\kappa$ -CZ, and the difference between experimental and calculated intensities, respectively. The final  $R$  factor and chi-square were  $R_{\text{wp}} = 11.9\%$  and  $S^2 = 42.4$ , respectively.

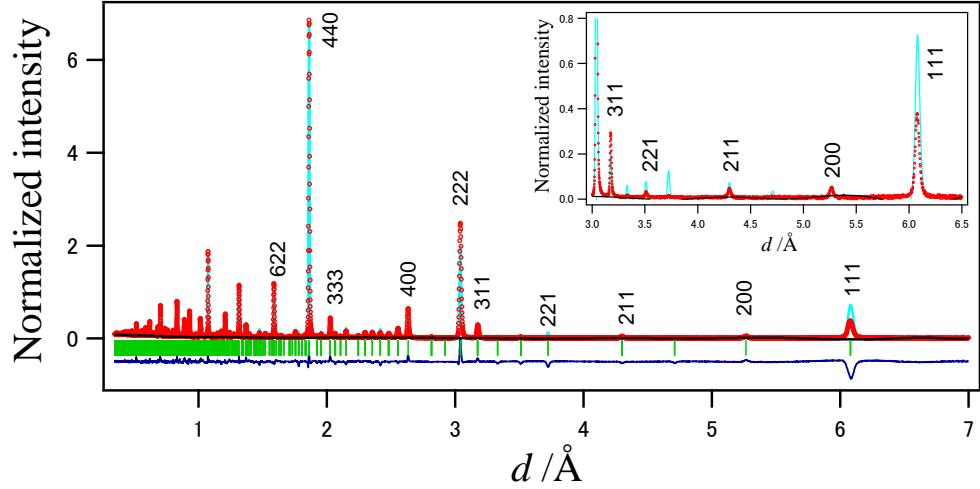

Figure S4. Rietveld refinement patterns of  $\kappa$ -CZ, which was refined by trigonal structure (space group  $R-3m$ ). The red “◦” marks, solid light-blue line, green tick marks, and lower solid blue line indicate experimental data, calculated data, Bragg-peak positions of cubic  $\kappa$ -CZ, and the difference between experimental and calculated intensities, respectively. Lattice parameters were.  $a=10.534199(8) \text{\AA}$ ,  $\alpha=90.05^\circ$ . The final  $R$  factor and chi-square were  $R_{\text{wp}} = 16.2\%$  and  $S^2 = 78.6$ , respectively. Inset: The diffracted patterns for the  $d$ -spacing between 3.0 and 6.5  $\text{\AA}$ .

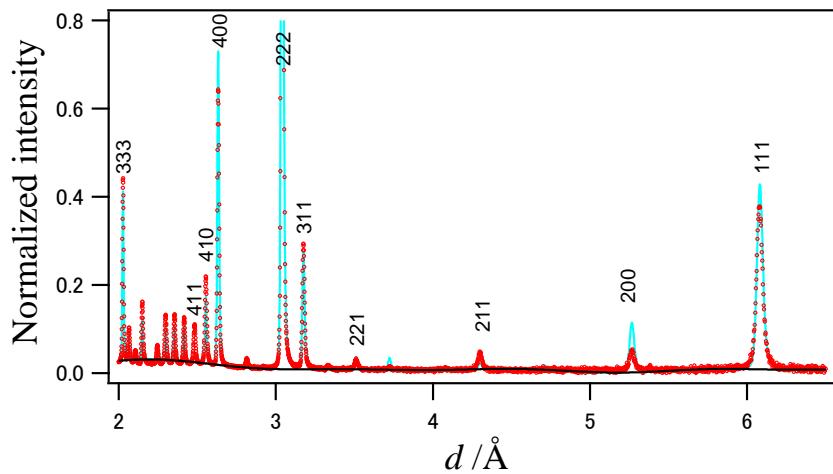

Figure S5. Rietveld refinement patterns of oxygen-deficient cubic  $\kappa$ -CZ ( $\text{CeZrO}_{3.773(1)}$ ). The diffracted patterns for the  $d$ -spacing between 2.0 and 6.5 Å.

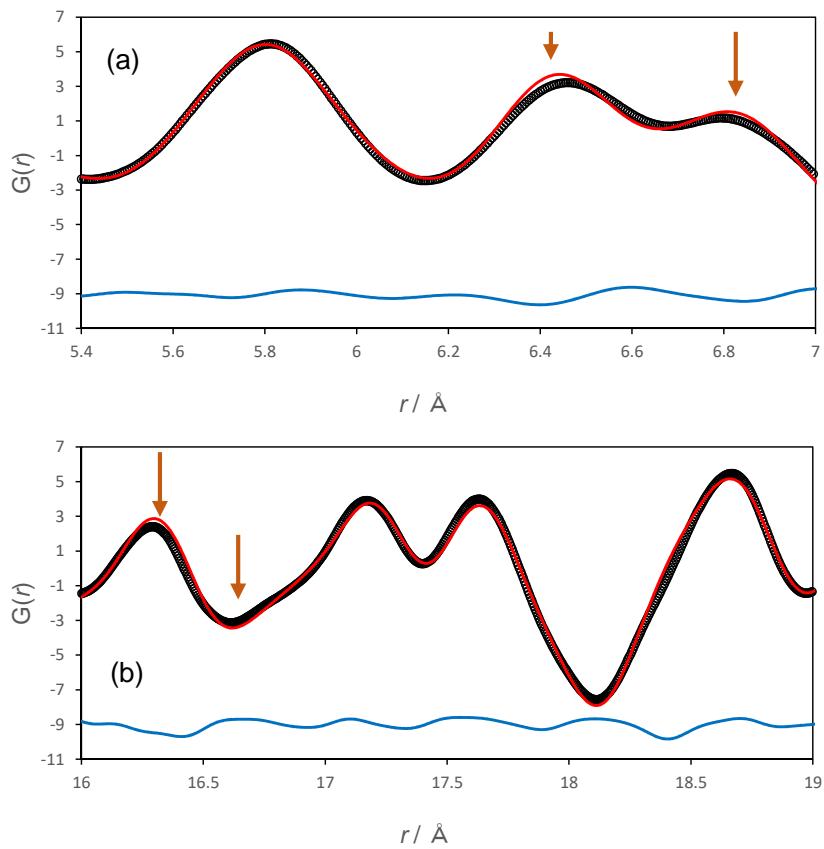

Figure S6. Neutron PDF spectra of oxygen-deficient cubic  $\kappa$ -CZ ( $\text{CeZrO}_{3.773(1)}$ ) in the  $r$  range (b)  $5.4 < r < 7.0$  Å and  $16 < r < 19$  Å. The black “ $\circ$ ” marks, solid red line, and lower solid blue line indicate experimental  $G(r)$  data, calculated data, and the difference between experimental and calculated intensities, respectively. Arrows indicate that the differences (miss fits) were observed by the cubic phase.

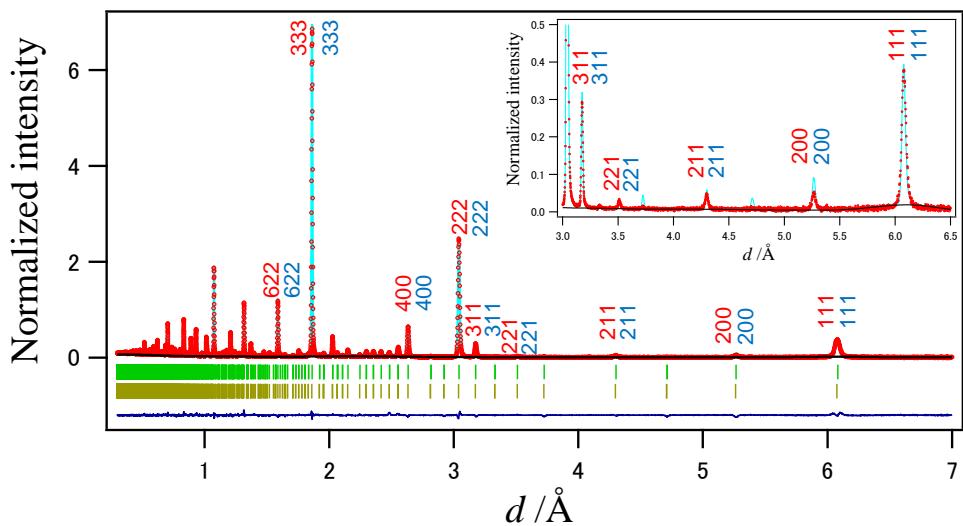

Figure S7. Rietveld refinement patterns of  $\kappa$ -CZ, which was refined by double-phases of cubic structure (space group  $P2_{1}3$ ). The red “◦” marks, solid light-blue line, green tick marks, and lower solid blue line indicate experimental data, calculated data, Bragg-peak positions of cubic  $\kappa$ -CZ, and the difference between experimental and calculated intensities, respectively. The final results gave the following crystallographic parameters: (1)  $\text{CeZrO}_{3.82(2)}$  belonging to space group  $P2_{1}3$  with  $a=10.53803(4)$  Å and (2)  $\text{CeZrO}_{3.96(3)}$  belonging to space group  $P2_{1}3$  with  $a=10.52825(2)$  Å. The final  $R$  factor and chi-square were  $R_{wp}=8.17\%$  and  $S^2=20.0$ , respectively. Inset: The diffracted patterns for the  $d$ -spacing between 3.0 and 6.5 Å.

Table S1. Crystal structure parameters of  $\kappa$ -CZ: (a)  $P2_13$ , (b)  $R-3m$ 

| Sample                    | $\kappa$ -CZ             |                    |
|---------------------------|--------------------------|--------------------|
| Chemical formula          | CeZrO <sub>3.82(2)</sub> | CeZrO <sub>4</sub> |
| Crystal system            | Cubic                    | Trigonal           |
| Space group               | $P2_13$ (#198)           | $R-3m$ (#166_2)    |
| $a$ (Å)                   | 10.534324(7)             | 10.53270(8)        |
| $\alpha=\beta=\gamma$ (°) | 90                       | 90.012(2)          |
| $V$ (Å <sup>3</sup> )     | 1169                     | 1168.5             |
| Z                         | 16                       | 16                 |
