

Supplementary Figure 1. The effects of DLEU1 knockdown on HK-2 cells. HK-2 cells were transfected with si-NC or si-DLEU1, respectively. (A) Cell proliferation was detected by MTT assay. (B and C) Cell migration and invasion were determined using transwell assay.

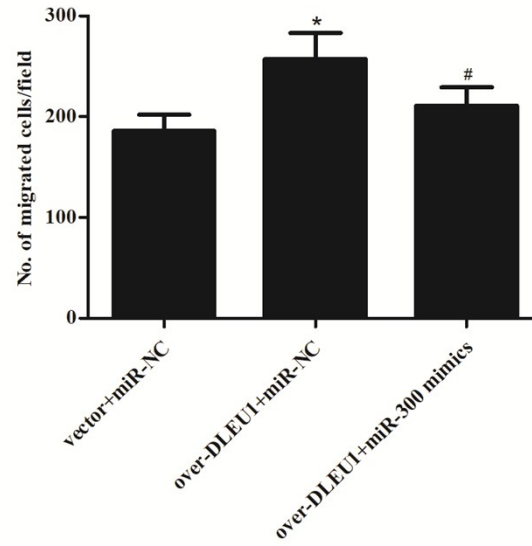

Supplementary Figure 2. The effects of DLEU1 on GHINK-1 cells by overexpressing miR-300 mimics. GHINK-1 cells were co-transfected with over-DLEU1 and miR-300 mimics. (A) Cell proliferation was detected by MTT assay. (B and C) Cell migration and invasion were determined using transwell assay. * $p < 0.05$ vs. vector+miR-NC group; # $p < 0.05$ vs. over-DLEU1+miR-NC group.
