

## SUPPLEMENTARY MATERIAL

(for the communication “**Exclusive Transition State Stabilization in the Supramolecular Catalysis of Diels Alder Reaction by a Uranyl Salophen Complex.**” submitted by Antonella Dalla Cort, Luigi Mandolini\* and Luca Schiaffino).

### Synthesis of compounds **2b** and **3b**.

### Materials

Salicylaldehyde (Aldrich) and uranyl acetate dihydrate (Fluka) were commercial samples. 3-Phenylsalicylaldehyde was available from a previous work.<sup>1</sup> 4,5-Bis-dodecyloxy-benzene-1,2-diamine was prepared according to a literature procedure.<sup>2</sup>

### Synthetic procedure

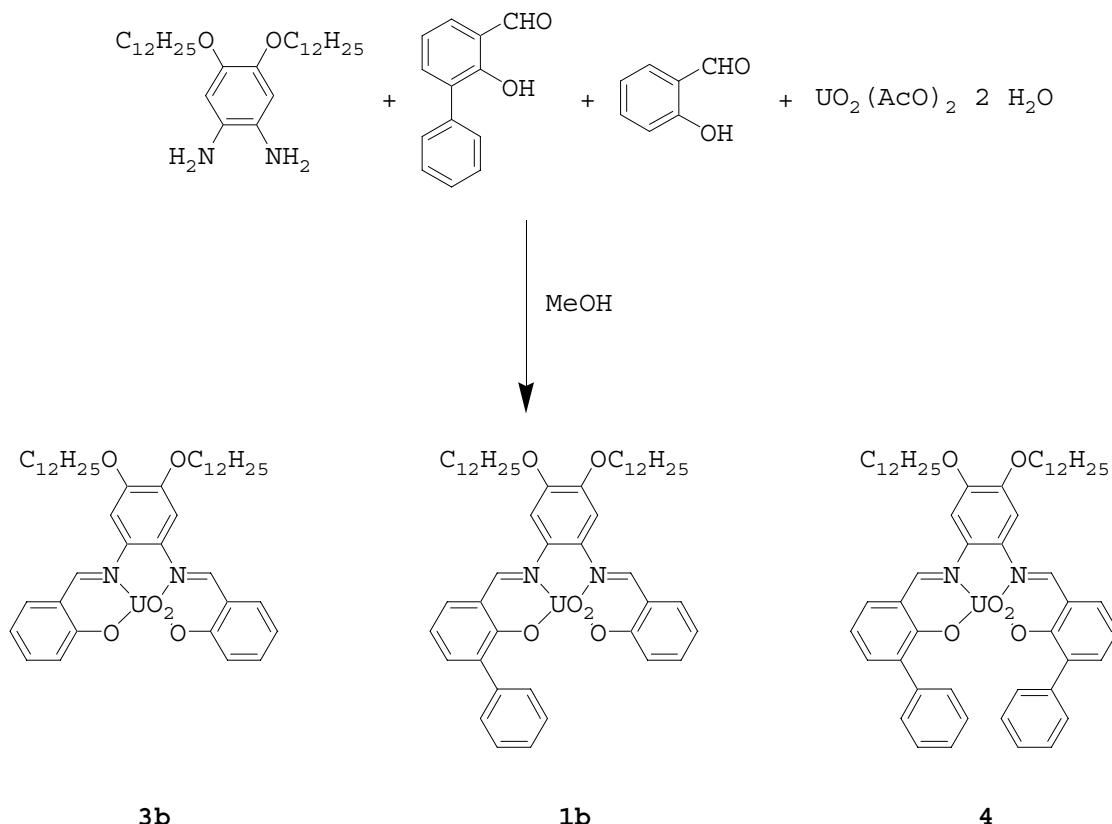

Nonsymmetrical complex **1b** was prepared according to a previously described statistical procedure.<sup>3</sup> The three reaction products were separated by flash chromatography on silica gel. Product **4** was eluted with cyclohexane/acetone 80:20, product **1b** with cyclohexane/acetone 50:50, product **3b** with acetone.
