**Room-temperature growth of ferroelectric
Diisopropylammonium Bromide with 12-crown-4 addition**

Kaige Gao, Chuang Liu, Zepeng Cui, Jiansheng Zhu, Hong-Ling Cai* and X.S. Wu*

School of Physics, Nanjing University, Nanjing 210093, P. R. China

Scheme 1.

Figure S1. The morphology of DIPAB obtained with 12-crown-4 addition. The red arrow is the crystal growth direction of b axis. Needle-like transparent crystals with diameter of about 1 mm and the largest length of 17 mm can be seen in the figure.

Figure S2. XRD of one crystallographic plane shows the plane to be (0 0 1) or (1 0 0) plane.

Figure S3. XRD of one crystallographic plane shows the plane to be (1 0 -1).

Figure S4. Specific heat capacity of the obtained DIPAB.

Figure S5. $1/\epsilon'$ across the Curie point at different frequencies.
