

Supplementary information:

Platinum species in the pores of NaX, NaY and NaA zeolites studied using EPR, XAS and FTIR spectroscopies

Yasar Akdogan, Christina Vogt, Matthias Bauer, Helmut Bertagnolli, Liviu Giurgiu, Emil Roduner

Fig. S1: Experimental $k^3 \cdot \chi(k)$ functions from 3.5 – 15 \AA^{-1} of Pt/zeolite samples calcined with O_2 . From top to bottom: 6% Pt/NaY (short dash line), 6% Pt/NaA (double dotted dashed line), 12% Pt/NaX (heating rate 0.5 K/min, medium dashed line), and 6% Pt/NaX (heating rate 1.25 K/min, long dashed line).
