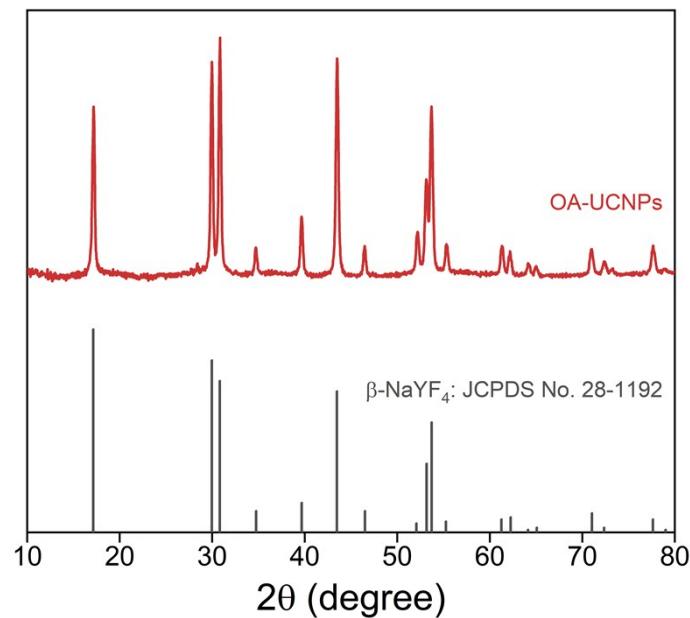

Fig. S1 XRD patterns of OA-UCNPs and the standard data of hexagonal NaYF₄ (JCPDS No. 28-1192).

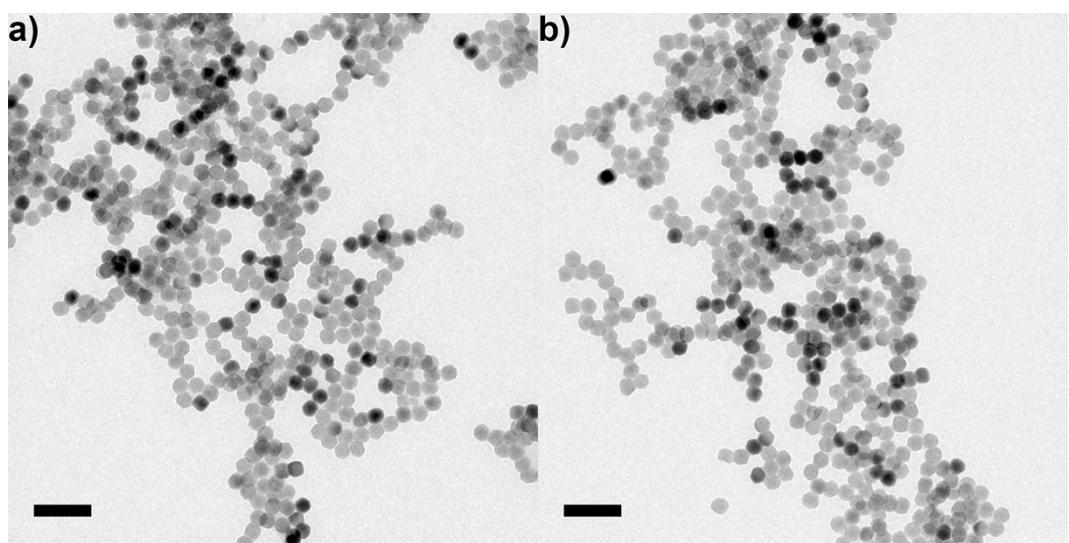

Fig. S2 TEM images of (a) ligand-free UCNPs and (b) PEI-UCNPs. Scale bars: 100 nm.

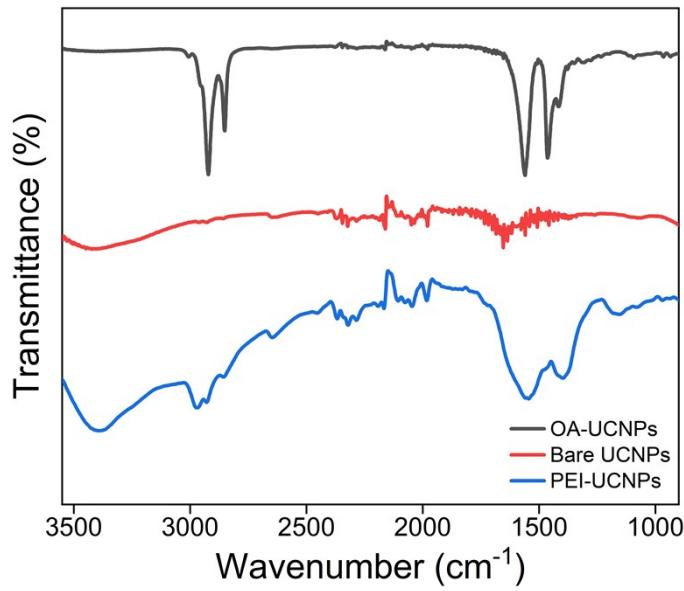

Fig. S3 FT-IR spectra of OA-, ligand-free, and PEI-UCNPs.

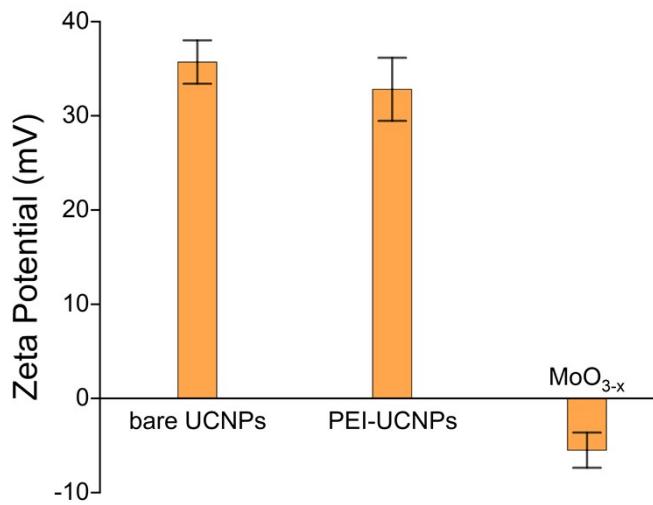

Fig. S4 Zeta potential of bare UCNPs, PEI-UCNPs, and MoO_{3-x} NSs at pH 4.5. Error bars represent the standard deviations of three independent measurements.

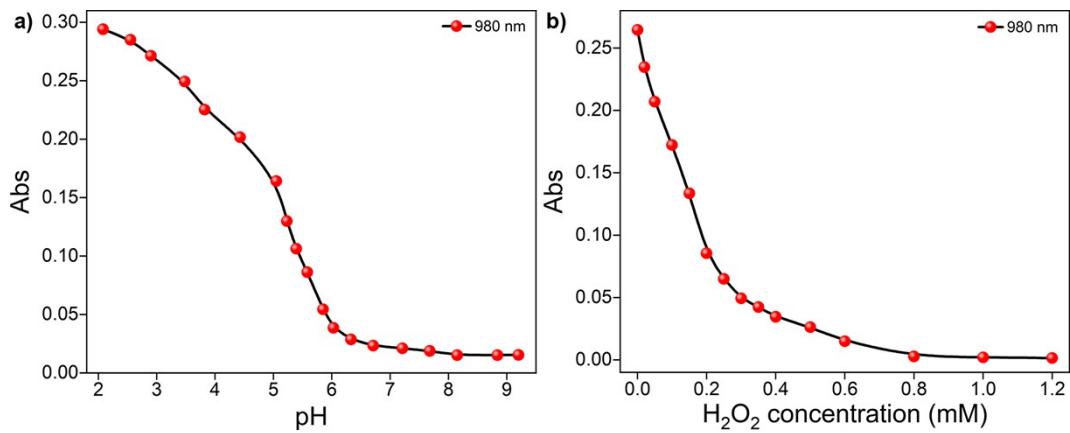

Fig. S5 (a) The absorbance of MoO_{3-x} NSs solution at 980 nm as a function of pH. (b) Absorption intensities of MoO_{3-x} NSs solution at 980 nm with the addition of different H_2O_2 concentrations at pH 4.5. Black lines serve as a guide to the eye.

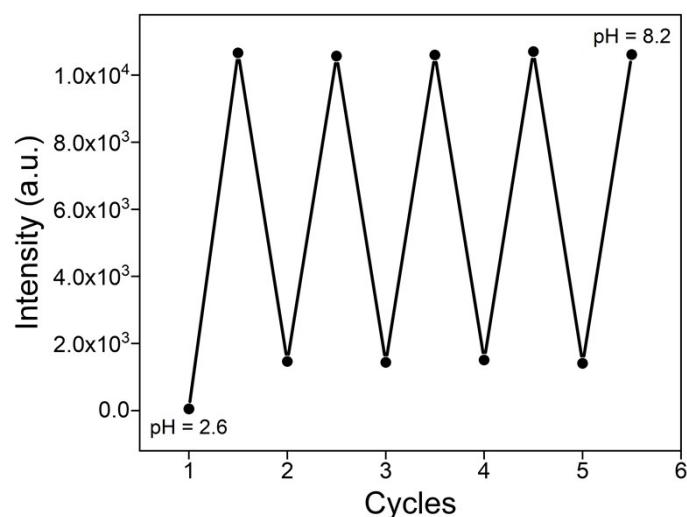

Fig. S6 Fluorescence intensity of OA-UCNPs at 658 nm in the presence of MoO_{3-x} NSs solution by altering the pH value in the non-contact mode.

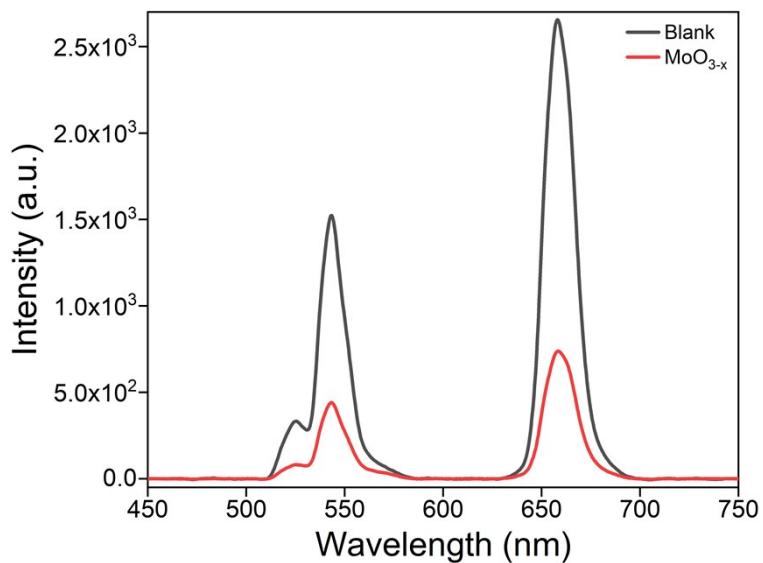

Fig. S7 UCL spectra of 0.5 mg/mL PEI-UCNPs in the absence and presence of MoO_{3-x} NSs solution (0.35 mg/mL) in non-contact mode.

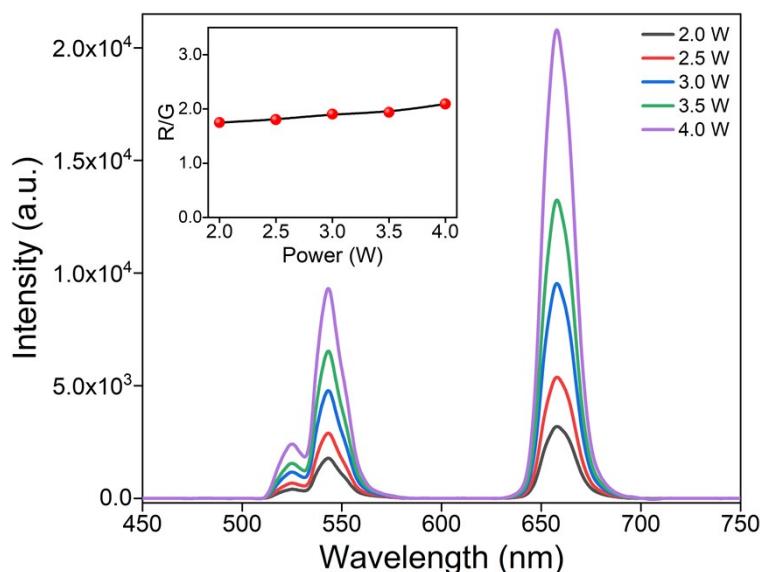

Fig. S8 UCL spectra of 0.5 mg/mL PEI-UCNPs under excitation at 980 nm with different power. Inset: the relationship between the R/G ratio and laser power.
