### List of Contents:

Circular dichroism spectroscopy	S2
MALDI-TOF MS data for synthesized oligonucleotides	S2
PAGE for primer extension experiments with Therminator DNA polymerase	S3
Selected NMR spectra for compounds <b>2–6</b> and <b>8</b>	S4–S18

### Circular dichroism spectroscopy

CD spectra were recorded at 20 °C on a Jasco J-715 spectropolarimeter as an average of 5 scans from 200–350 nm. Measurements were performed using a split width of 2.0 nm, a scan speed of 50 nm pr. min and in quartz optical cells with an optical path length of 5.0 mm. The samples contained 1.5 μM concentrations of each strand in a medium salt buffer (2.5 mM Na<sub>2</sub>HPO<sub>4</sub>, 5 mM NaH<sub>2</sub>PO<sub>4</sub>, 100 mM NaCl, and 0.1 mM EDTA, pH 7.0) and before the measuring, the oligonucleotides were annealed by heating the samples to 75 °C followed by controlled cooling.

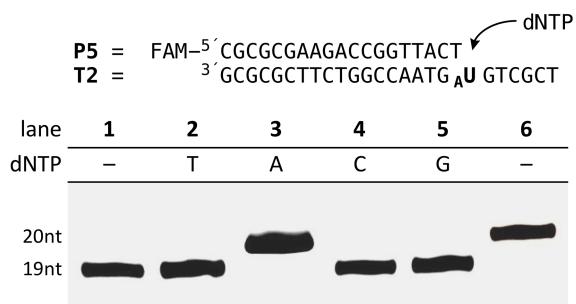

**Fig. S1** CD spectra for duplexes 1-12 (entry numbers refer to Fig. 2).

### MALDI-TOF MS data for synthesized oligonucleotides

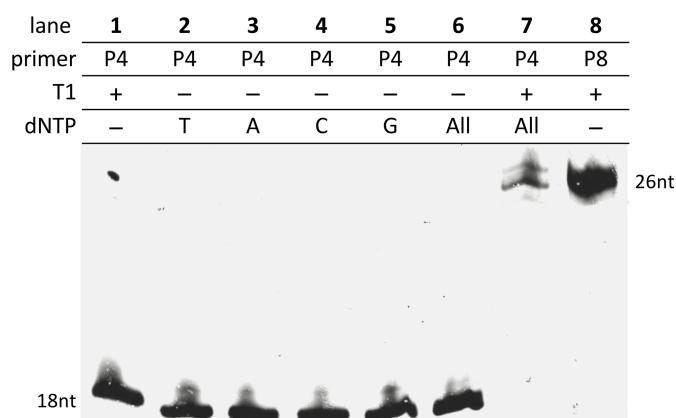

**Table S1:** MALDI-TOF MS data for synthesized oligonucleotides.

#	Sequence	MW (calcd)	MW (found)
1	5'-d(GGTCA <b>A<sub>T</sub></b> ATGCGA)-3'	3848.6	3848.4
2	5'-d(GGTCA <b>A<sub>T</sub>A<sub>T</sub></b> GCGA)-3'	3698.4	3698.6
3	5'-d(TCGCA <b>U<sub>A</sub></b> TTGACC)-3'	3745.5	3746.8
4	5'-d(TCGCAT <b>A<sub>T</sub></b> TGACC)-3'	3759.5	3760.4
5	5'-d(TCGCA <b>U<sub>A</sub>U<sub>T</sub></b> GACC)-3'	3581.4	3581.5
6	5'-d(TCG CTG <b>U<sub>A</sub>GT</b> AAC CGG TCT TCG CGC G)-3'	7790.1	7794.7

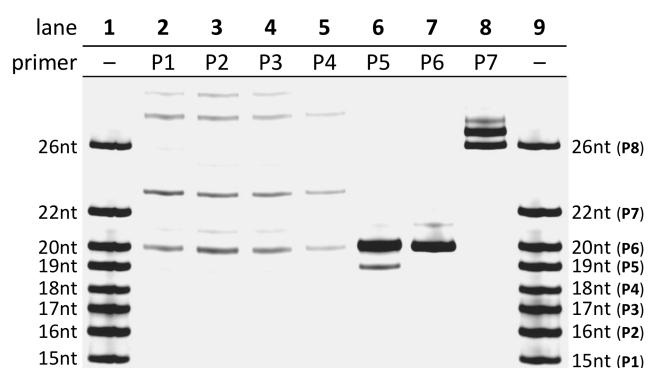

## PAGE for primer extension experiments with Therminator DNA polymerase

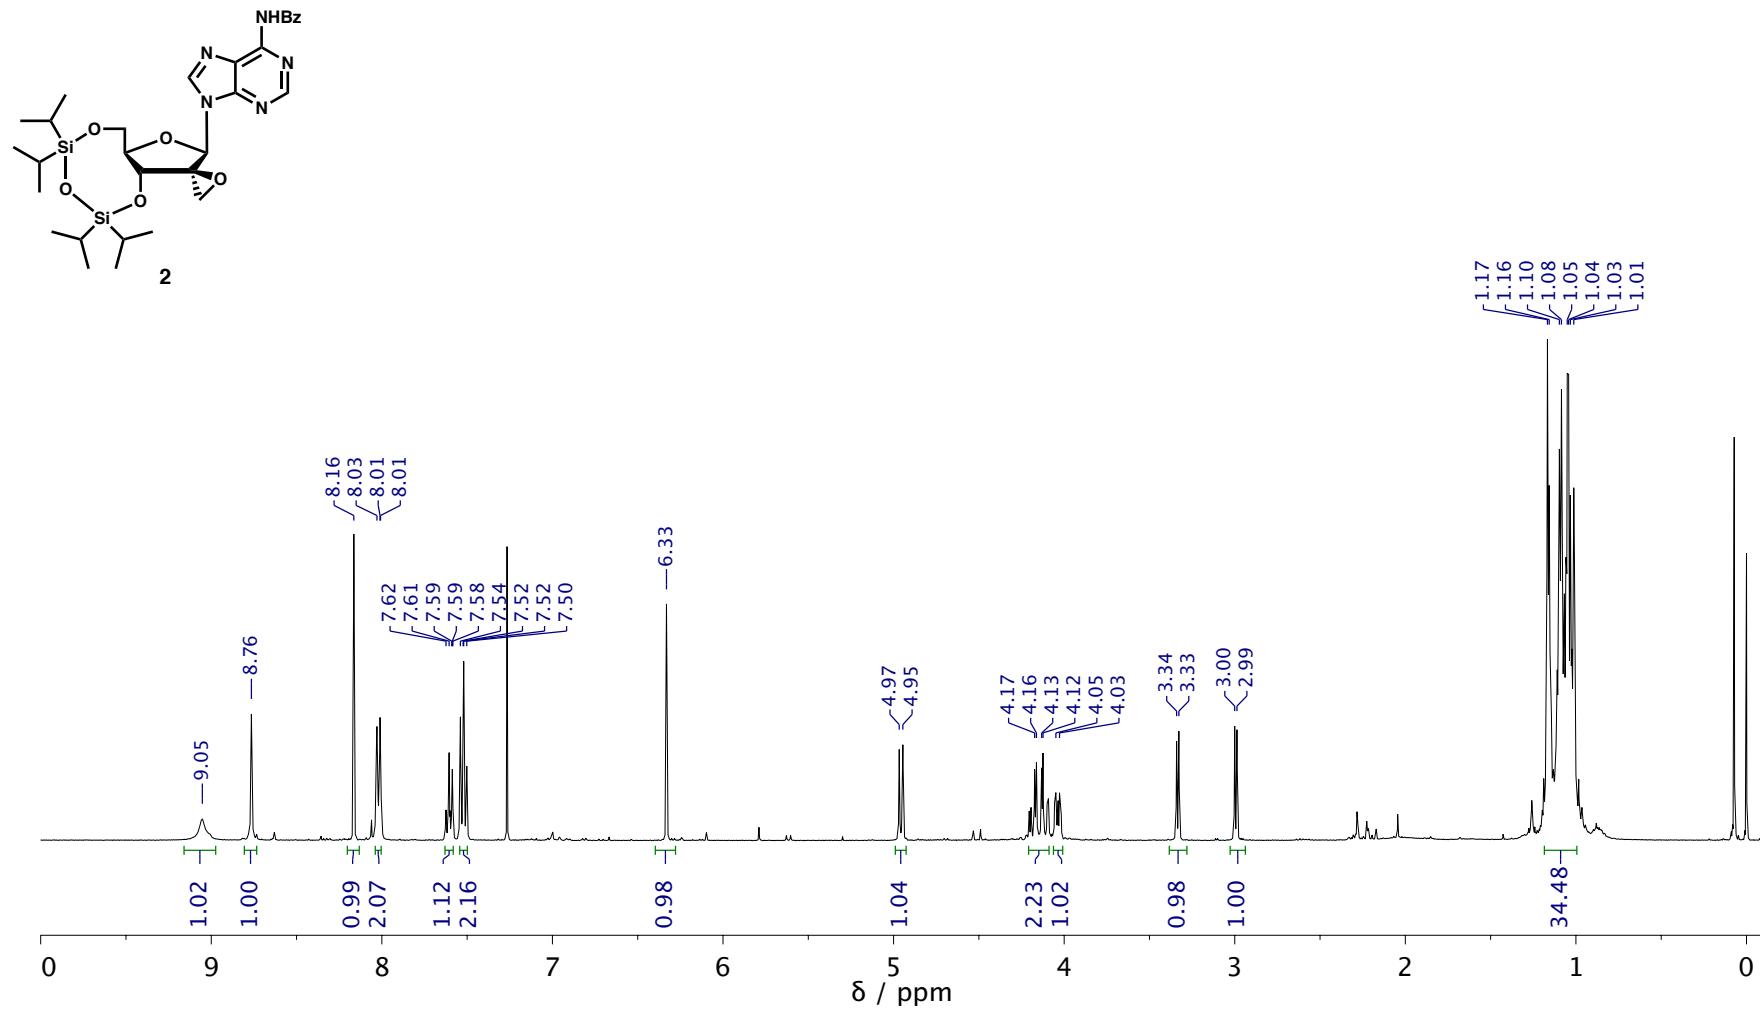

**Fig. S2** PAGE analysis of a single nucleotide incorporation study with natural dNTPs and primer **P5** in the presence of template **T2** and Therminator. Lane 1 corresponds to the negative control and lane 6 corresponds to the 20 nt synthetic control **P6**. Conditions: [P5] = 0.1  $\mu$ M; [T2] = 0.1  $\mu$ M; [dNTP] = 40  $\mu$ M; [Therminator] = 0.02 U/ $\mu$ L; temperature = 75 °C; reaction time = 10 min.

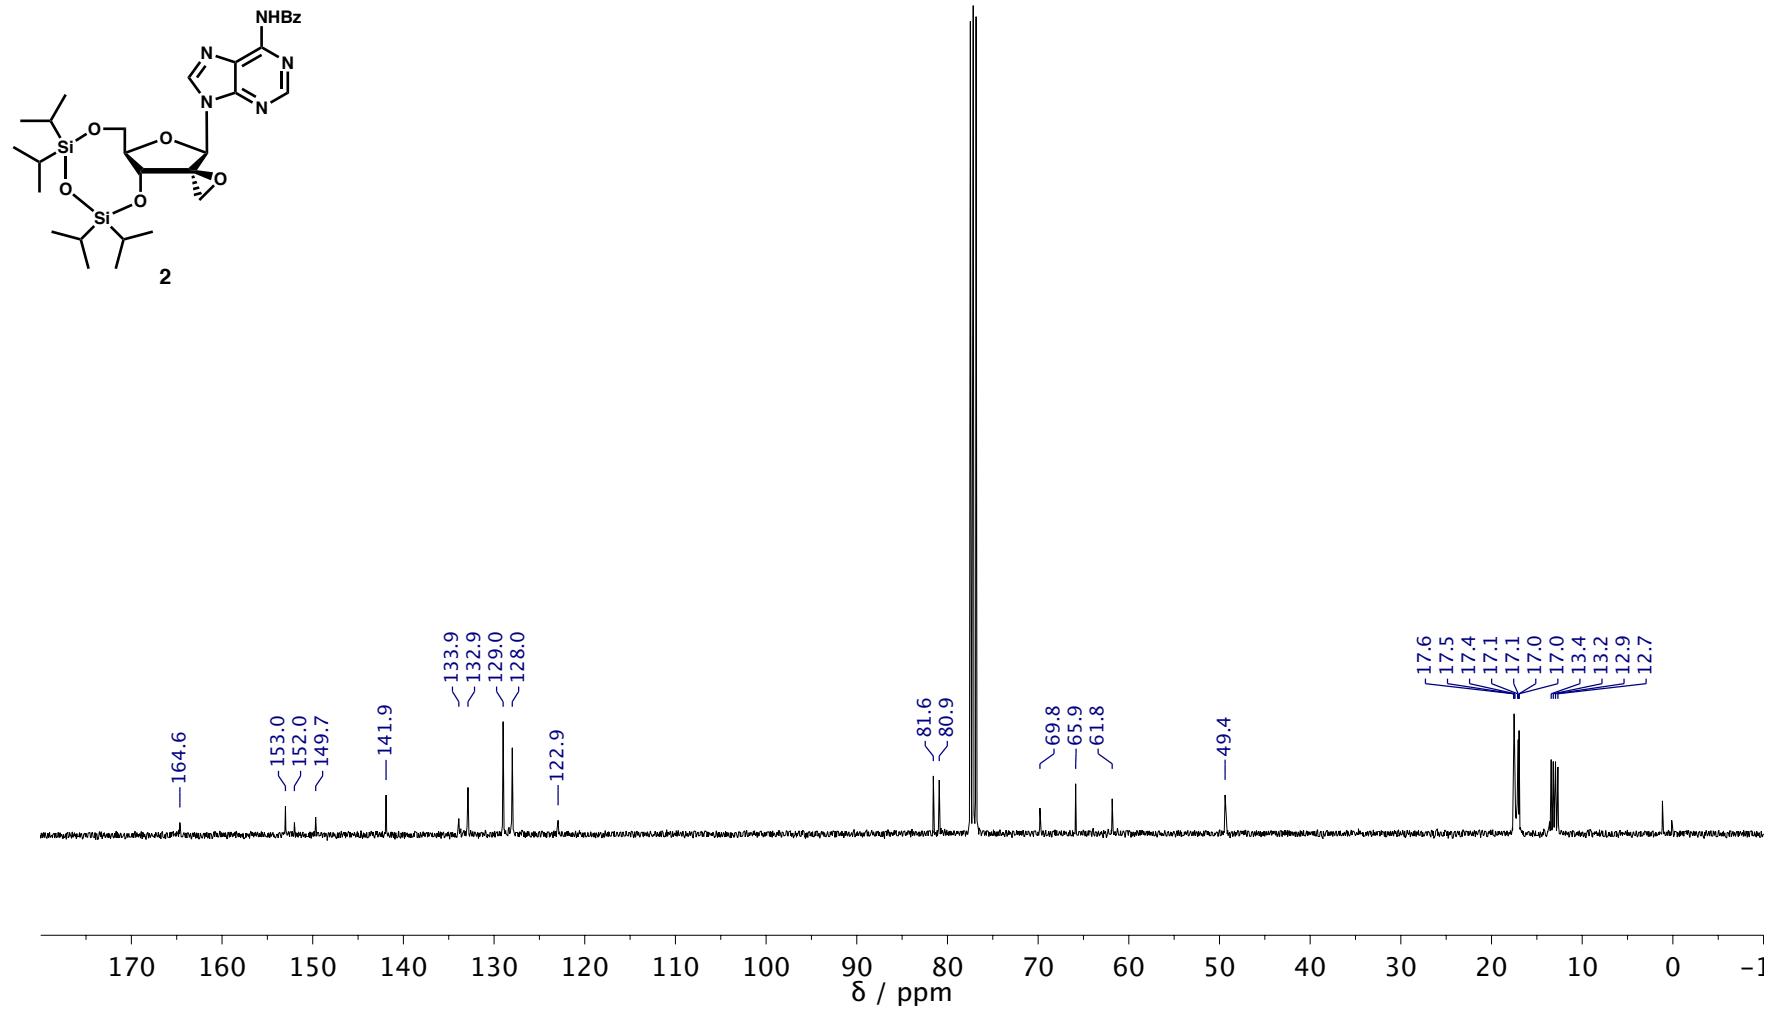

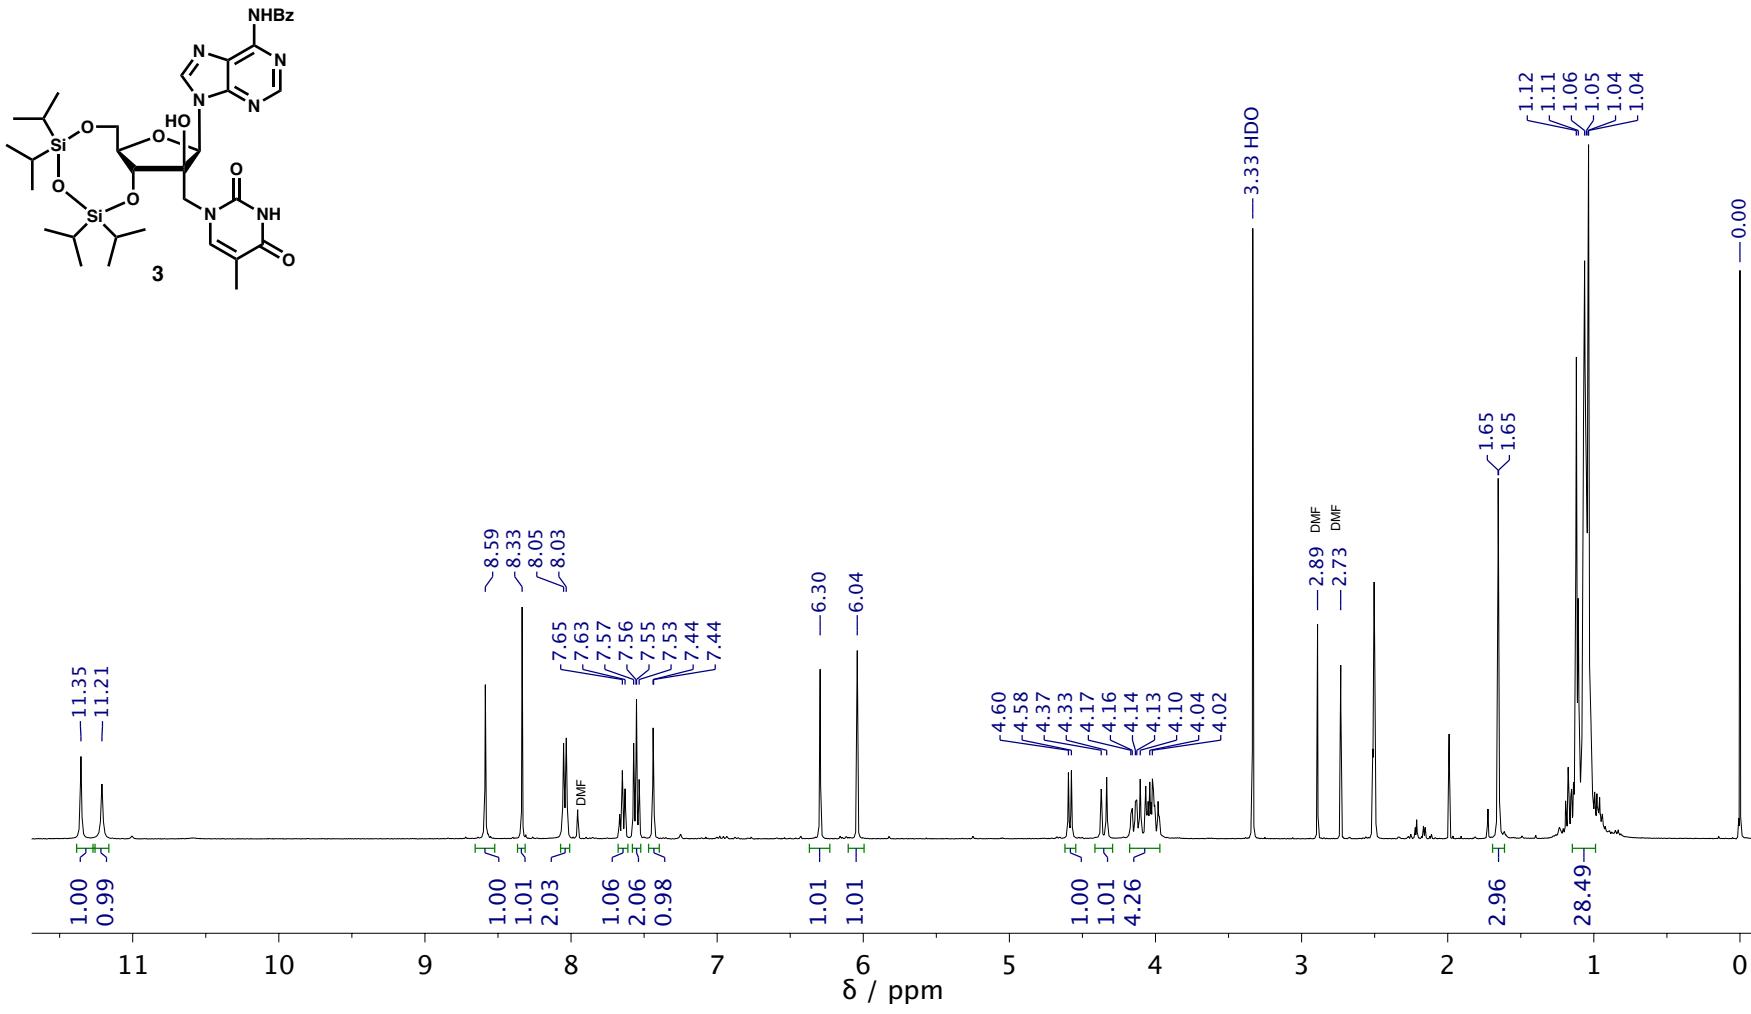

**Fig. S3** PAGE analysis of template-free negative controls with natural dNTPs, primer **P4** and Therminator. Lane 1 and 8 correspond to the dNTP-free negative control with primer **P4** and **P8**, respectively. Lane 7 corresponds to positive control. Conditions: [primer] = 0.1  $\mu$ M; [T1] = 0.1  $\mu$ M; [dNTP] = 40  $\mu$ M; [Therminator] = 0.02 U/ $\mu$ L; temperature = 75 °C; reaction time = 15 min.

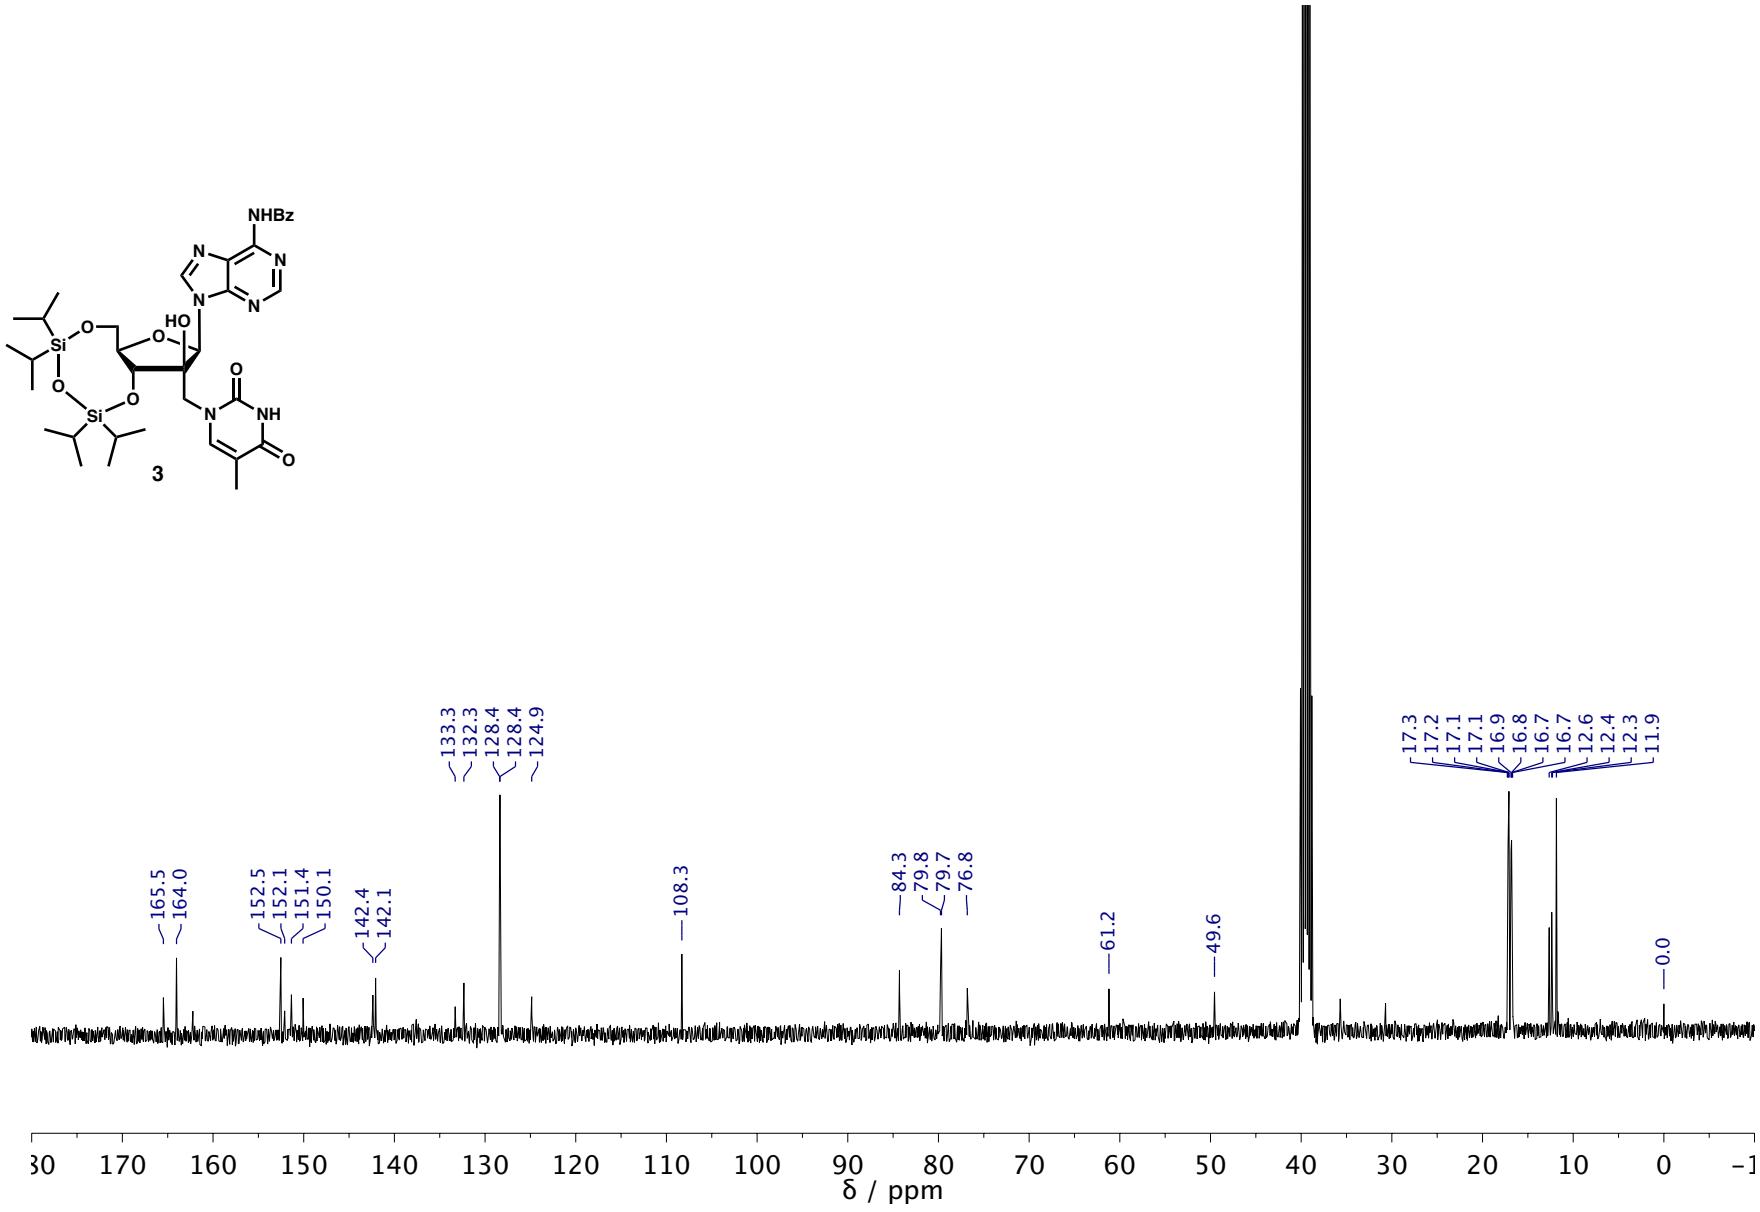

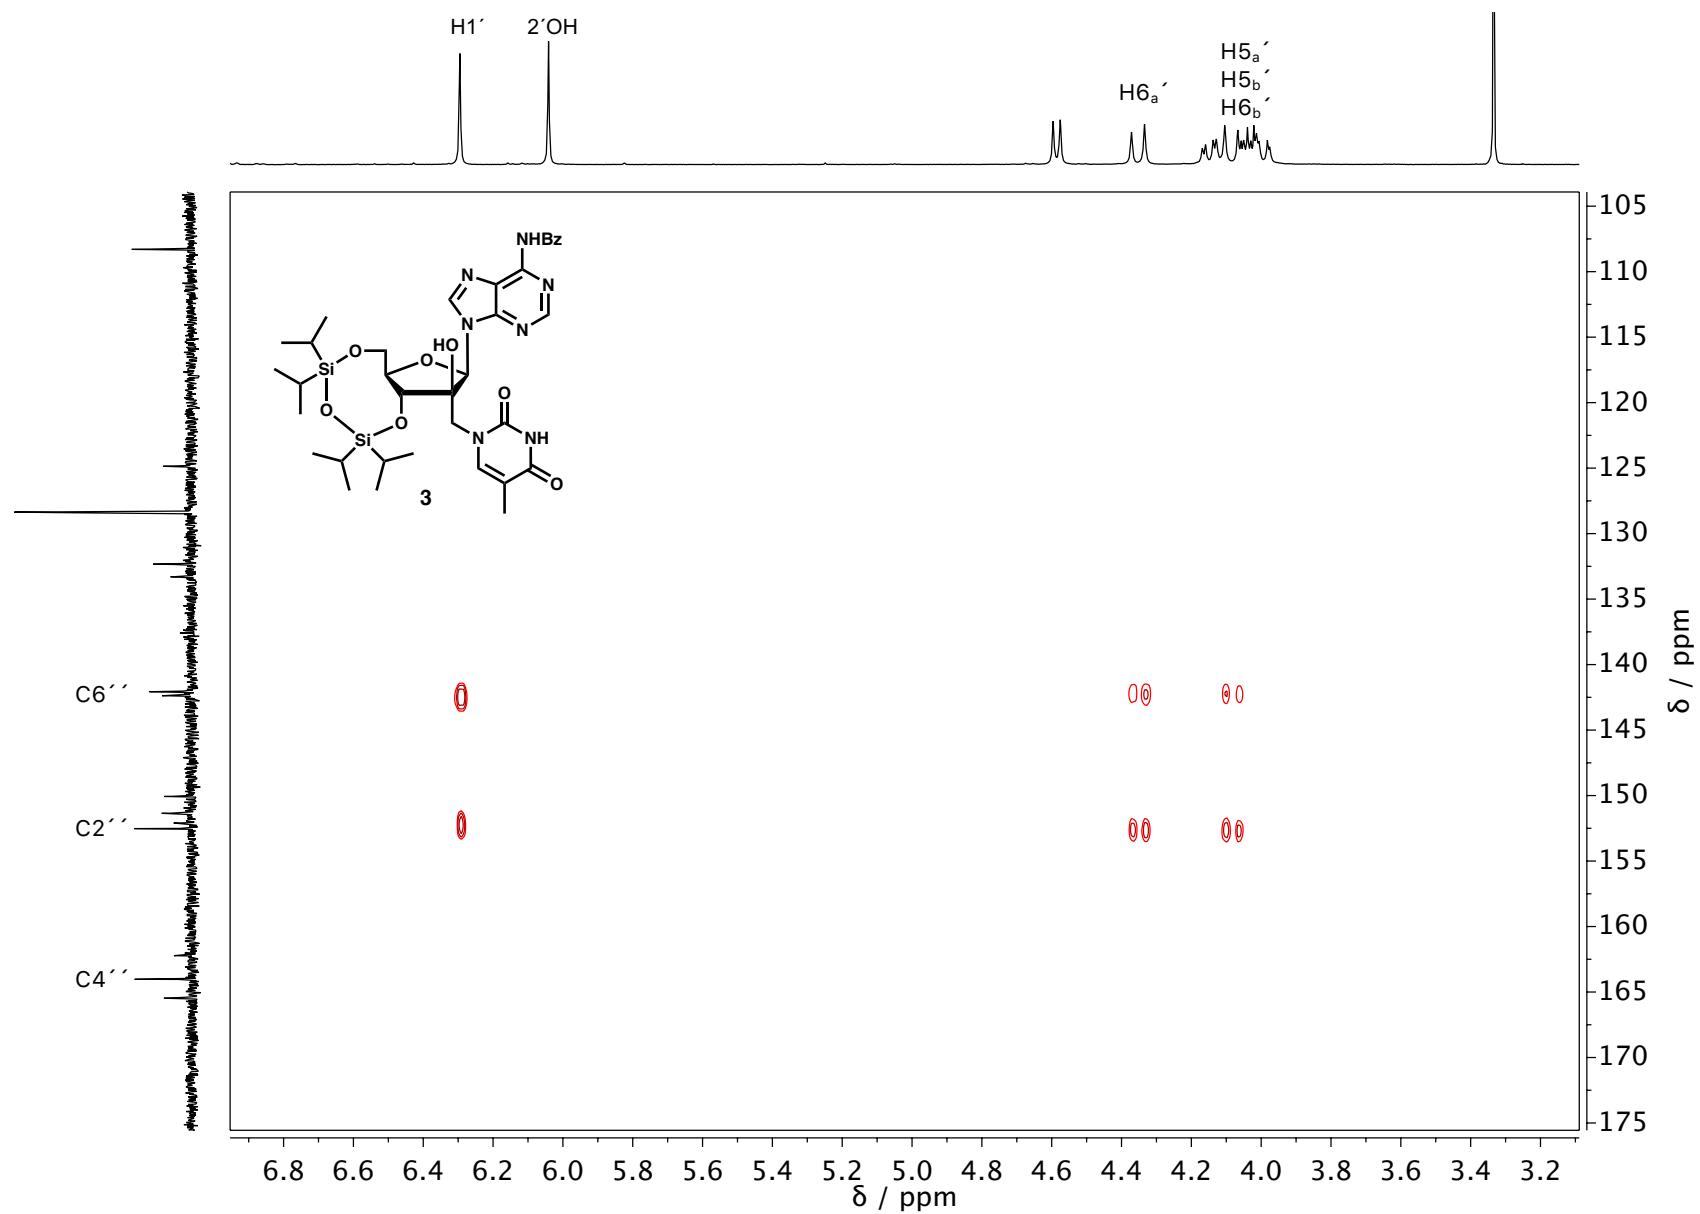

**Fig. S4** PAGE analysis of full-length extension reactions with the primers **P1-P7** in the presence of **T2** and Therminator. Both lane 1 and 9 corresponds to the synthetic primers **P1-P7** and the 26 nt synthetic control **P8**. Conditions: [primer] = 0.1  $\mu$ M; [T2] = 0.1  $\mu$ M; [dNTP] = 200  $\mu$ M; [Therminator] = 0.02 U/ $\mu$ L; temperature = 75 °C; reaction time = 60 min.
