<sup>a</sup>Reaction conditions: **1a** (0.2 mmol), **2a** (0.4 mmol), [{Ru(*p*-cymene)Cl<sub>2</sub>}]<sub>2</sub> (5 mol%), Cu(OAc)<sub>2</sub> (50 Mol%), AgSbF<sub>6</sub> (20 mol%), DCE solvent at 100 °C, 5 h. <sup>b</sup>Isolated Yields. <sup>c</sup>Under an air. <sup>d</sup>Under N<sub>2</sub> atmosphere.

## 2. Experimental Procedures:

General Remarks: Commercial reagents were used without further purification. Melting points are uncorrected. For compounds <sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) and <sup>13</sup>C NMR (100 MHz, CDCl<sub>3</sub>) spectra were recorded in deuteriochloroform (CDCl<sub>3</sub>) on a Bruker 400 MHz spectrometer using tetramethylsilane (TMS, δ = 0) as an internal standard at room temperature. Mass spectra were recorded on Agilent 1200 LC/MS-6110 mass spectrometer. Spectral data and copy of <sup>1</sup>H, <sup>13</sup>C NMR spectra of all compounds (**3a-u**) and (**5a-b**), (**12a-d**), **13** are listed below. Aza flavanones are prepared from known literature procedure<sup>13</sup>.

### Typical procedure for olefinic coupling of 2-aryl tetrahydroquinoline with methylacrylate:

To an oven dried pressure tube placed with substituted 2-phenyl tetrahydroquinoline (**1a**) (0.2 mmol), alkene (**2a**) (0.4 mmol), [{RuCl<sub>2</sub>(*p*-cymene)}<sub>2</sub>] (5 Mol-%), AgSbF<sub>6</sub> (20 Mol-%) and

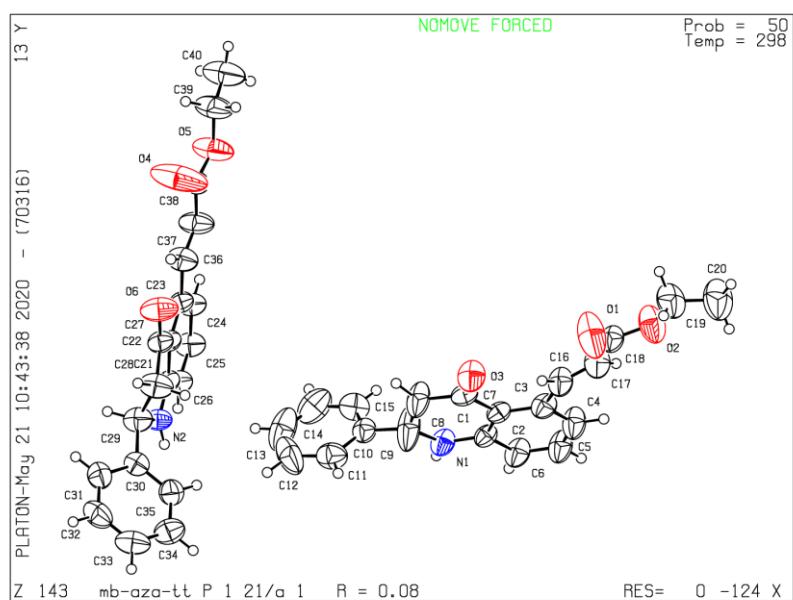

$\text{Cu(OAc)}_2$  (50 mol%) was added DCE (2 mL). The pressure tube was purged with nitrogen gas three times. The reaction mixture was stirred at 100 °C for 5hr. After accomplishment of the reaction as shown by TLC, the crude reaction mixture was diluted with  $\text{CH}_2\text{Cl}_2$ , filtered over celite pad. The filtrate was concentrated under reduced pressure and purified by column chromatography (10%, EtOAc / hexanes) to provide the desired pure product (**3a**) in good 94% yield.

**General procedure for synthesis of alkyl (*E*)-3-(4-methoxy-2-arylquinolin-5-yl)acrylate<sup>14</sup>**

**12a-d:** A stirred mixture of methyl (*E*)-3-(4-oxo-2-phenyl-1,2,3,4-tetrahydroquinolin-5-yl)acrylate (1 equiv.) and iodine (1 equiv.) in methanol was refluxed for 12h and then allowed to cool to room temperature and the product was purified through column chromatography using 10% EtOAc / hexane

**Procedure for synthesis of methyl 3-(2-(4-methoxyphenyl)-4-oxo-1,2,3,4-tetrahydroquinolin-5-yl)propanoate 13:** In round bottom flask, methyl (*E*)-3-(2-(4-methoxyphenyl)-4-oxo-1,2,3,4-tetrahydroquinolin-5-yl)acrylate 3o (50 mg) was taken and added zinc powder (3 equiv.), acetic acid solvent (3ml).After adding all the components , the round bottom flask was kept on a on preheated oil bath (120°C) for 24h. After accomplishment of the reaction as shown by TLC, the crude reaction mixture was diluted with DCM and filtered over celite pad. The filtrate was concentrated under reduced pressure and purified by column chromatography using 10% EtOAc / hexanes.

### 3. X-ray Analysis
