†Qiushi Jiang and Shang Wang contribute to the work equally.

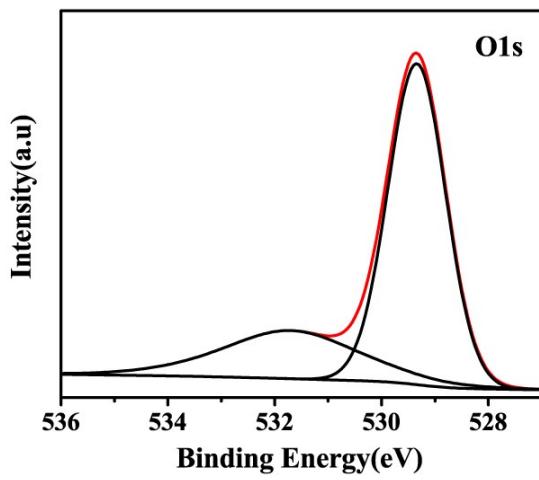

Fig. S1 O1s peaks of TiO<sub>2</sub> burst nanotubes

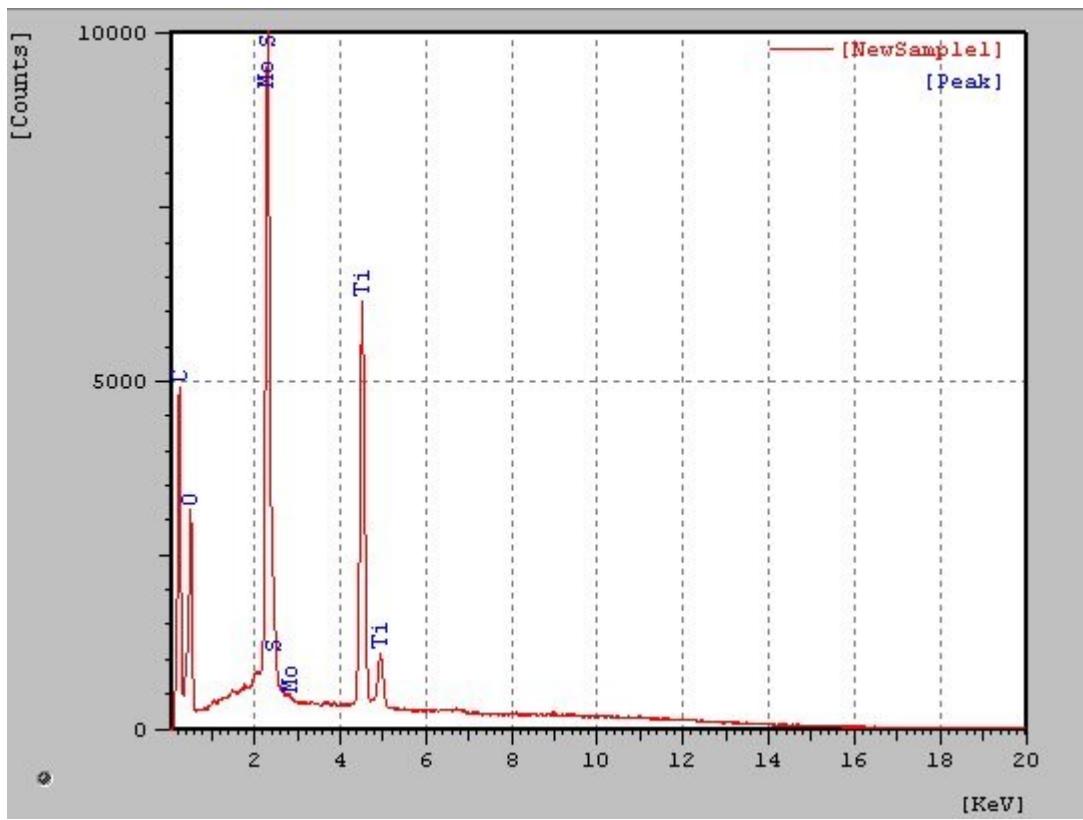

Fig.S2 EDS spectrum of TiO<sub>2</sub>/MoS<sub>2</sub> nanocomposites

Table S1. Comparison of BET surface area and pore volume of the samples.

| Photocatalyst                      | BET surface area ( $\text{m}^2 \text{ g}^{-1}$ ) | Pore volume ( $\text{cm}^3 \text{ g}^{-1}$ ) |
|------------------------------------|--|--|
| TiO <sub>2</sub>                   | 41.77  | 0.5264                                       |
| MoS <sub>2</sub>                   | 10.59  | 0.1214                                       |
| TiO <sub>2</sub> /MoS <sub>2</sub> | 113.97   | 0.4029                                       |

Table S2. Adsorption Parameters of the Langmuir and Freundlich Models for the Adsorption of MB onto the TiO<sub>2</sub> burst nanotubes, MoS<sub>2</sub> nanosheets and TiO<sub>2</sub>/MoS<sub>2</sub> nanocomposites.

|                                    | Langmuir model                         |                | Freundlich model |                |       |                |
|------------------------------------|--|----------------|------------------|----------------|-------|----------------|
|                                    | q <sub>max</sub> (mg g <sup>-1</sup> ) | K <sub>L</sub> | R <sup>2</sup>   | K <sub>F</sub> | 1/n   | R <sup>2</sup> |
| TiO <sub>2</sub>                   | 5.342                                  | 0.471          | 0.993            | 4.12           | 0.054 | 0.734          |
| MoS <sub>2</sub>                   | 42.91                                  | -17.92         | 0.996            | 37.03          | 0.043 | 0.658          |
| TiO <sub>2</sub> /MoS <sub>2</sub> | 72.46                                  | 1.468          | 0.997            | 41.87          | 0.157 | 0.784          |

Table S3. Weight% and AT% of main elements in TiO<sub>2</sub>/MoS<sub>2</sub> Nanocomposites.

| Element | Weight% | AT%    |
|---------|---------|--------|
| C       | 25.966  | 41.616 |
| O       | 37.915  | 45.620 |
| S       | 7.984   | 4.794  |
| Ti      | 11.551  | 4.642  |
| Mo      | 16.584  | 3.328  |

|       |         |         |
|-------|---------|---------|
| Total | 100.000 | 100.000 |
|-------|---------|---------|

Table S4. The normalized MB degradation rate constant of  $\text{TiO}_2$  burst nanotubes,  $\text{MoS}_2$  nanosheets and  $\text{TiO}_2/\text{MoS}_2$  nanocomposite

|                             | $k_{\text{MB}}$ | $S_{\text{BET}}$ | $k'_{\text{MB}}$      |
|-----------------------------|-----------------|------------------|-----------------------|
| $\text{TiO}_2$              | 0.003           | 41.77            | $7.18 \times 10^{-5}$ |
| $\text{MoS}_2$              | 0.011           | 10.59            | $1.04 \times 10^{-3}$ |
| $\text{TiO}_2/\text{MoS}_2$ | 0.048           | 113.97           | $4.21 \times 10^{-4}$ |
