Supplementary data

Biomolecular modifications during the keratinocytes differentiation: Raman spectroscopy and chromatographic techniques.

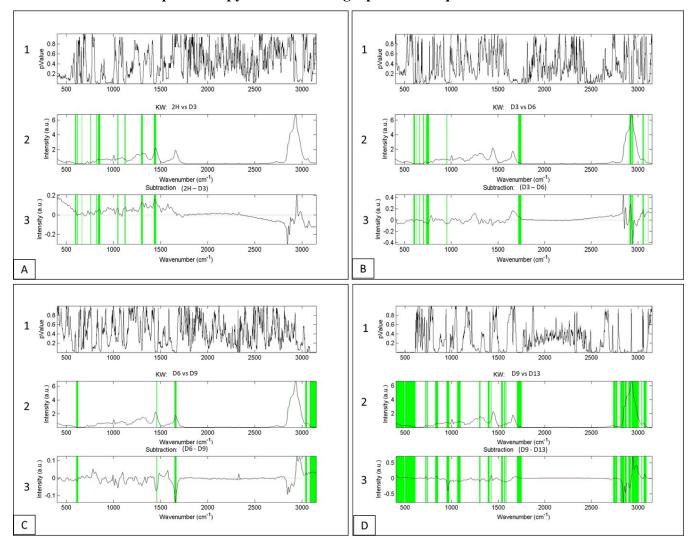

Figure supplementary data 1: Kruskal-wallis test applied on spectra from different differentiation days, A/ D0 vs D3, B/ D3 vs D6, C/D6 vs D9 and D/D9 vs D13.

1/ plot of the calculated p-Value at each wavenumber (used p-value limit: 0.05). 2/ Mean spectrum showing discriminant wavenumbers. 3/ substracted spectrum (A/ D0-D3, B/ D3-D6, C/ D6-D9 and D/ D9-D13).
