

Supplementary Fig. 1 HPLC chromatogram of six polyphenols in SLP. (A) 1, (\pm)-catechin hydrate; 2, (-)-epicatechin gallate; 3, cymaroside; 4, quercetin; 5, luteolin: detection at 254 nm. (B) 6, (-)-galocatechin: detection at 210 nm.

Supplementary Fig. 2 Body weight gain and food intake. Weekly body weight (A) and food intake (B) were recorded during the treatment. Because the mice did food-induced T maze test at 42-week, the food intake in 42-week-old mice was not recorded. Body weight gain (C) and total food intake (D) were calculated. Values represent the mean \pm SEM.

Supplementary Fig. 3 Effect of SLP on inflammatory factors in the serum and brain of APP/PS1 mice. (A) The level of TNF- α in the serum of WT+H₂O, APP/PS1+H₂O, and APP/PS1+SLP group mice, n = 8 per group. (B and C) mRNA levels of IL-4 (A) and IL-6 (B) in the cortex of WT+H₂O, APP/PS1+H₂O, and APP/PS1+SLP group mice. WT+H₂O, n = 12; APP/PS1+H₂O, n = 12; APP/PS1+SLP, n = 11. (D and E) The levels of T-AOC (D) and GSH (E) in the serum of mice, n = 8 per group. Values represent the mean \pm SEM. The results were analysed by one-way ANOVA. *** p < 0.001 vs WT+H₂O group; # p < 0.05 vs APP/PS1+H₂O group.

Supplementary Fig. 4 Effect of SLP on microglia activation in APP/PS1 mice. (A) Iba1 IHC in the brain. (B and C) Statistical analysis of Iba1 positive area (B) and integrated optical density (C), n = 6 per group. Values represent the mean ± SEM. The results were analysed by one-way ANOVA.
