

Supplementary Figure 1.

Supplementary Figure 1. The effect of CELF6 on MCF-7 cell proliferation.

(A) MCF7-CELF6 and vehicle control cells were subjected to clonogenic cell survival assays for 14 days. (B) The MTT assay was performed to determine the proliferation of MCF-7 cells transfected with the empty vector (control) or CELF6 pcDNA3.1 (+) plasmid and treated with or without NBT (2.5 μM) for 24 h. $***P < 0.001$ and $**P < 0.01$ compared with the control group using Student's t test.
