Supplementary Table 3. Histological scoring system of TNBS-induced colitis

Grade	Pathological characteristics
Grade 0	No evidence of inflammation
Grade 1	Low level of leukocyte infiltration with infiltration seen in <10% /HPF. No structural changes.
Grade 2	Moderate level of leukocyte infiltration with infiltration seen in 10% to 25% /HPF, crypt elongation, bowel wall thickening that does not extend beyond the mucosal layer, and no ulcers.
Grade 3	High level of leukocyte infiltration seen in 25% to 50% /HPF, crypt elongation, infiltration beyond the mucosal layer, thickening of bowel wall and superficial ulcers.
Grade 4	Marked degree of transmural leukocyte infiltration seen in >50% /HPF, elongated and distorted crypts, bowel wall thickening, and extensive ulcerations.
