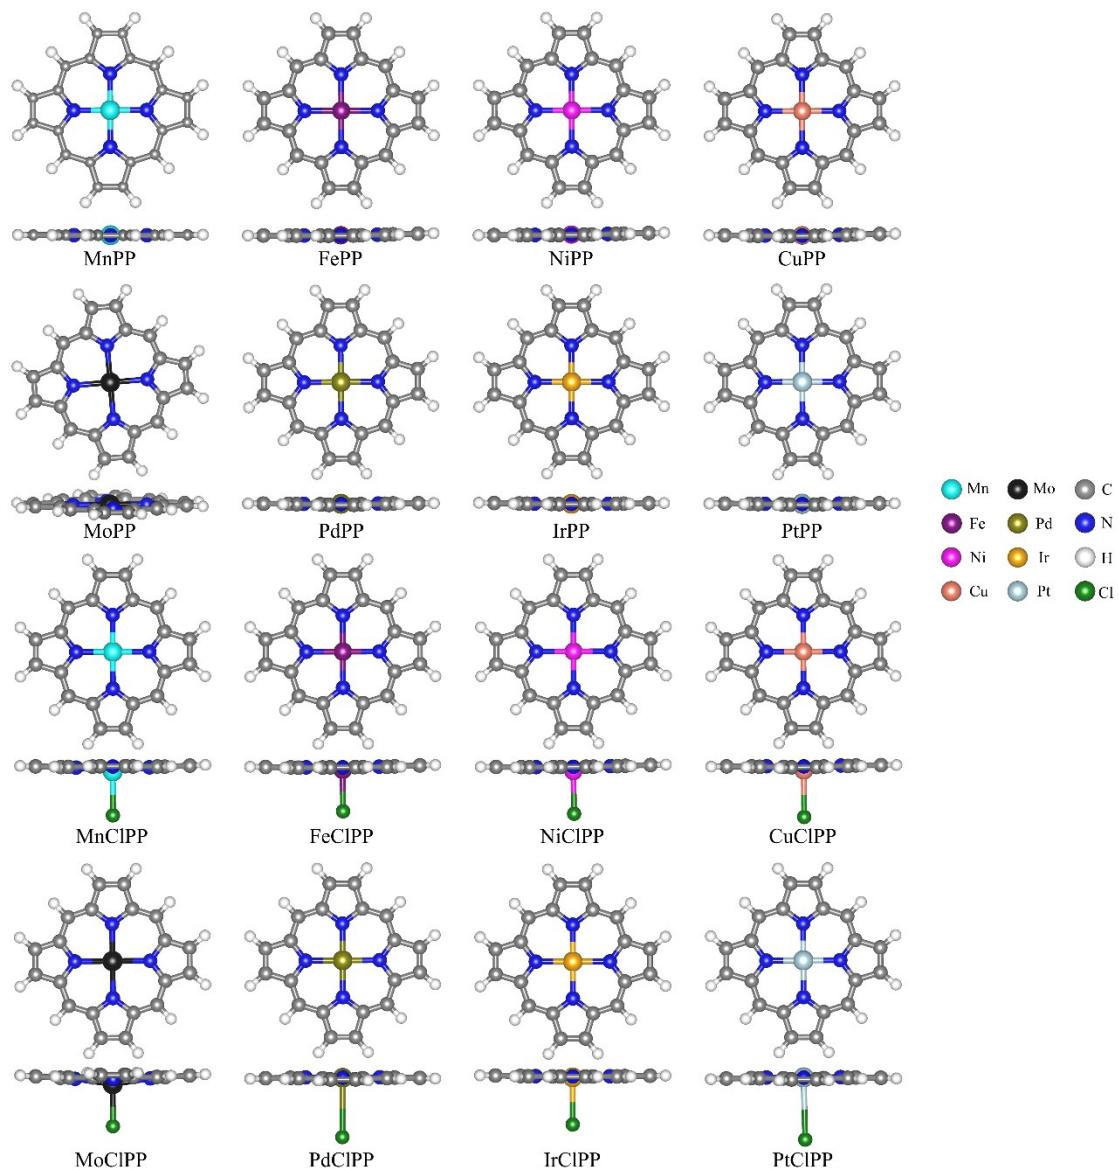

Fig. S1 DFT-optimized structures of MPP and MCIPP, where M = Mn, Fe, Ni, Cu, Mo, Pd, Ir and Pt. The cyan, purple, fuchsia, pink, black, olive, orange, lightblue, grey, blue, white and green balls represent Mn, Fe, Ni, Cu, Mo, Pd, Ir, Pt, C, N, H and Cl atoms, respectively.

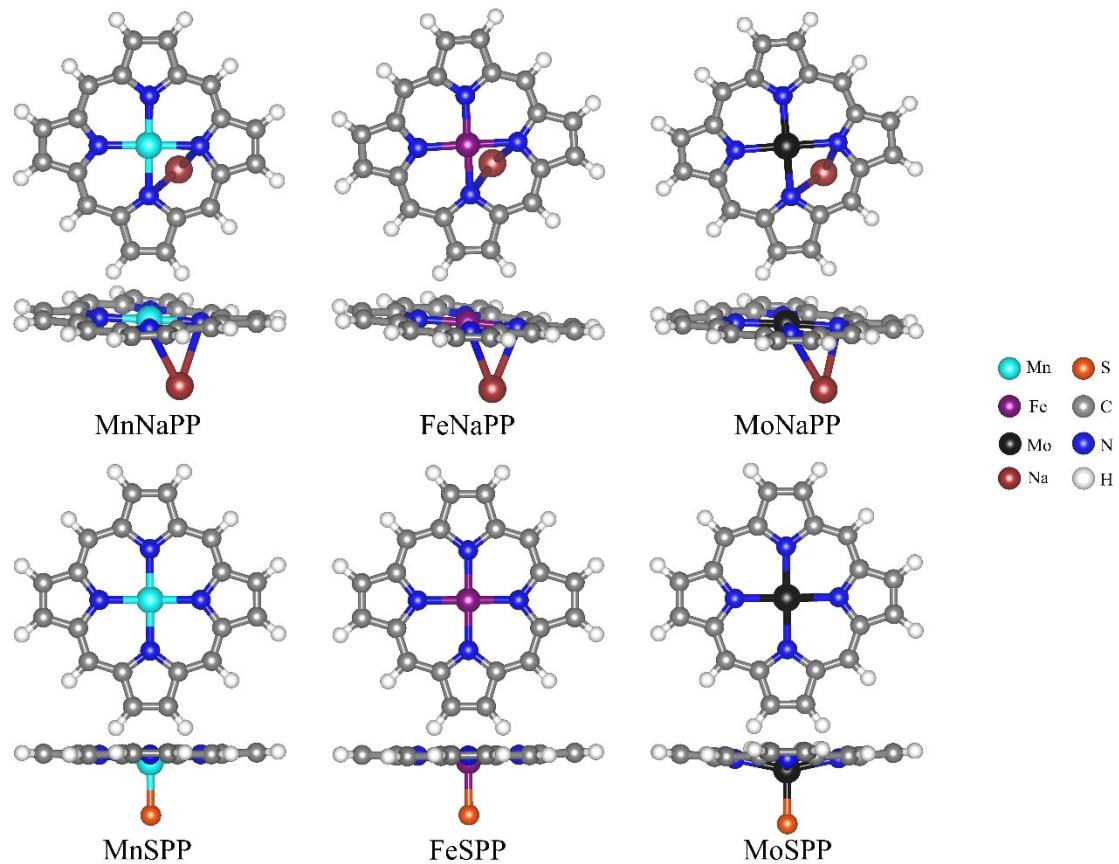

Fig. S2 DFT-optimized structures of MXPP, where M = Mn, Fe, and Mo, X= Na and S. The cyan, purple, black, brown, orange, grey, blue and white balls represent Mn, Fe, Mo, Na, S, C, N and H atoms, respectively.

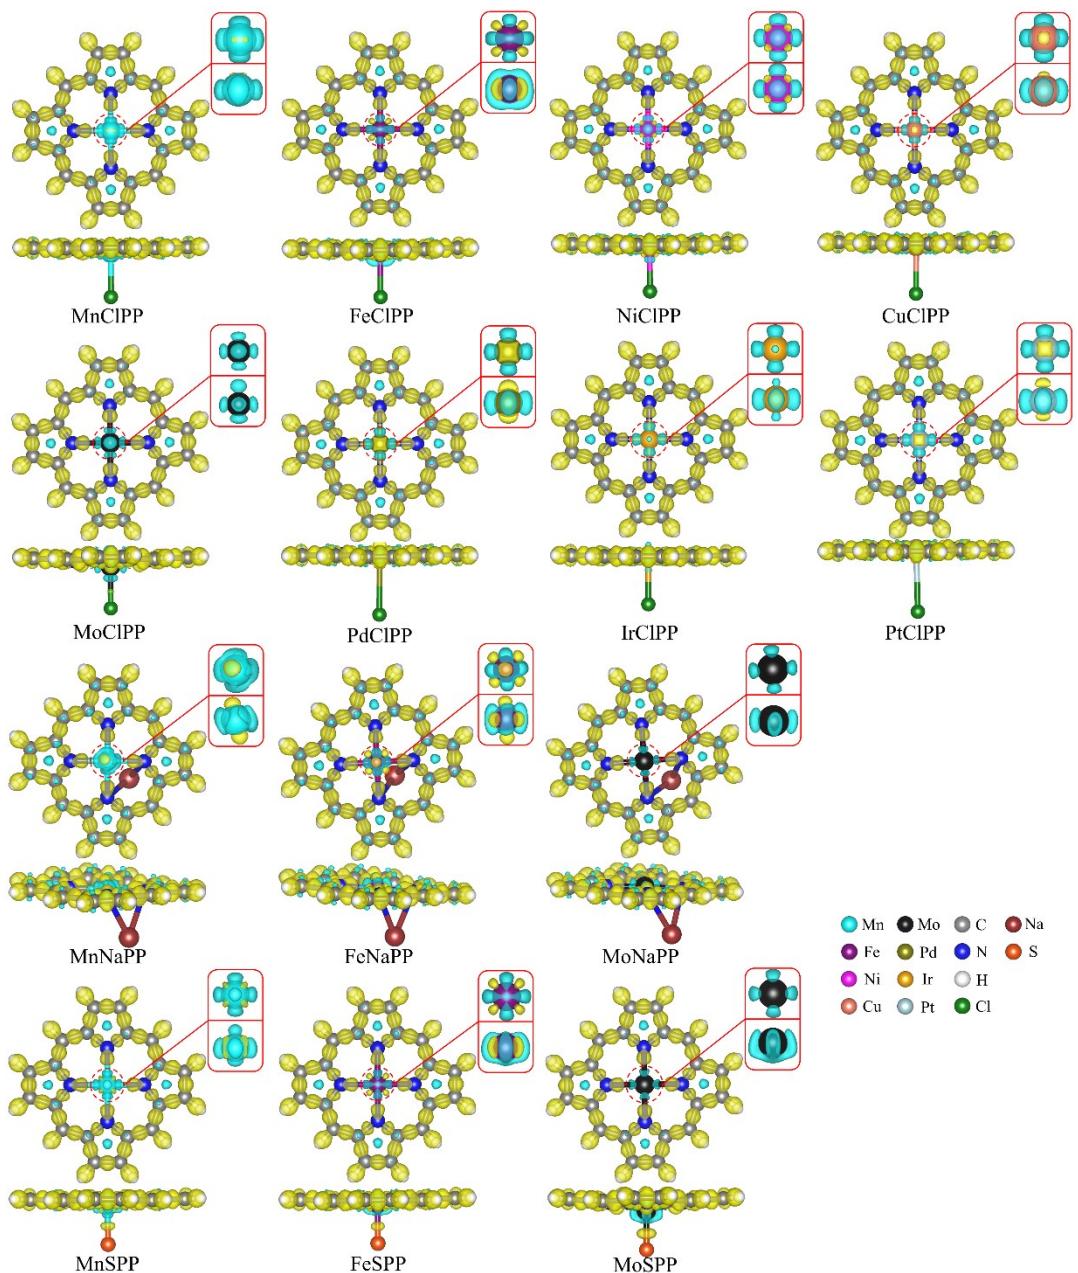

Fig. S3 Top and side views of isosurface of deformation charge density of MPP and MCIPP, where M = Mn, Fe, Ni, Cu, Mo, Pd, Ir and Pt. The inset shows the top and side views of the enlarged deformation charge density of the metal sites. The value of isosurface is $0.02 \text{ eV}/\text{\AA}^3$. The cyan, purple, fuchsia, pink, black, olive, orange, lightblue, grey, blue, white and green balls represent Mn, Fe, Ni, Cu, Mo, Pd, Ir, Pt, C, N, H and Cl atoms, respectively.

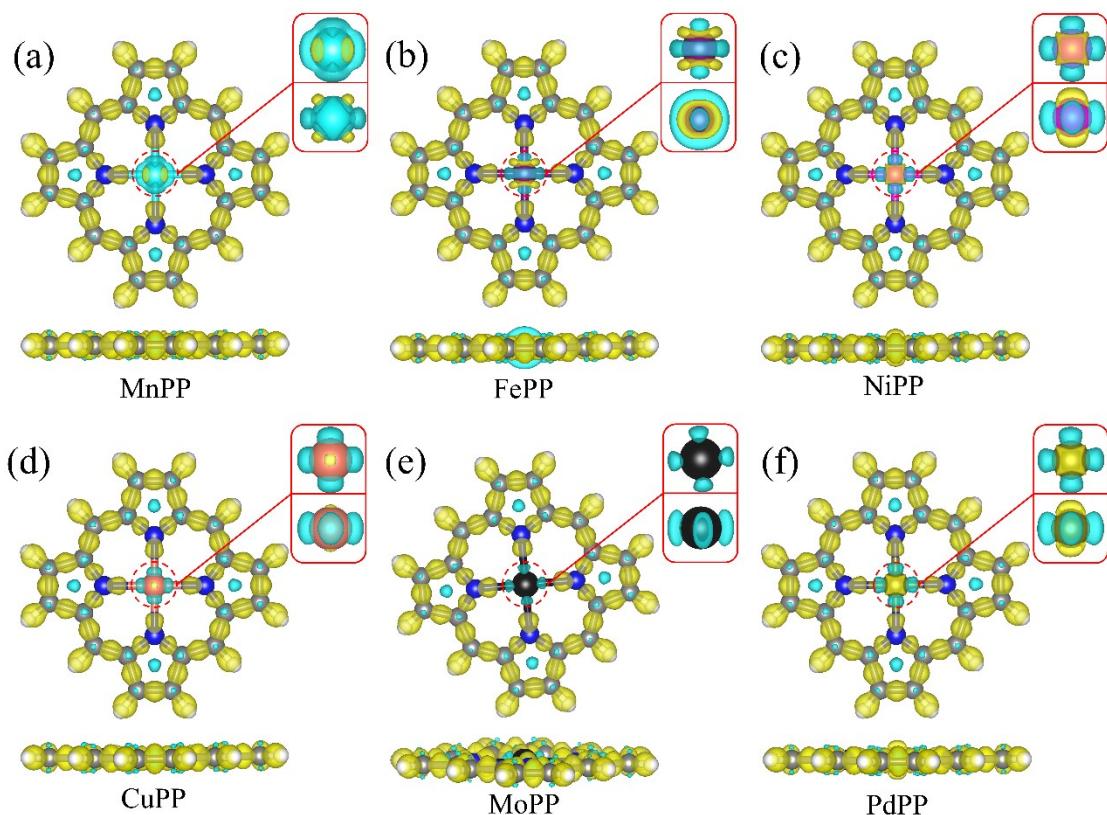

Fig. S4 Top and side views of isosurface of deformation charge density of MNaPP and MSPP, where M = Mn, Fe, and Mo. The inset shows the top and side views of the enlarged deformation charge density of the metal sites. The yellow areas represent charge accumulation and the cyan areas represent charge depletion. The value of isosurface is 0.02 eV/Å³. The cyan, purple, black, brown, orangered, grey, blue and white balls represent Mn, Fe, Mo, Na, S, C, N and H atoms, respectively.

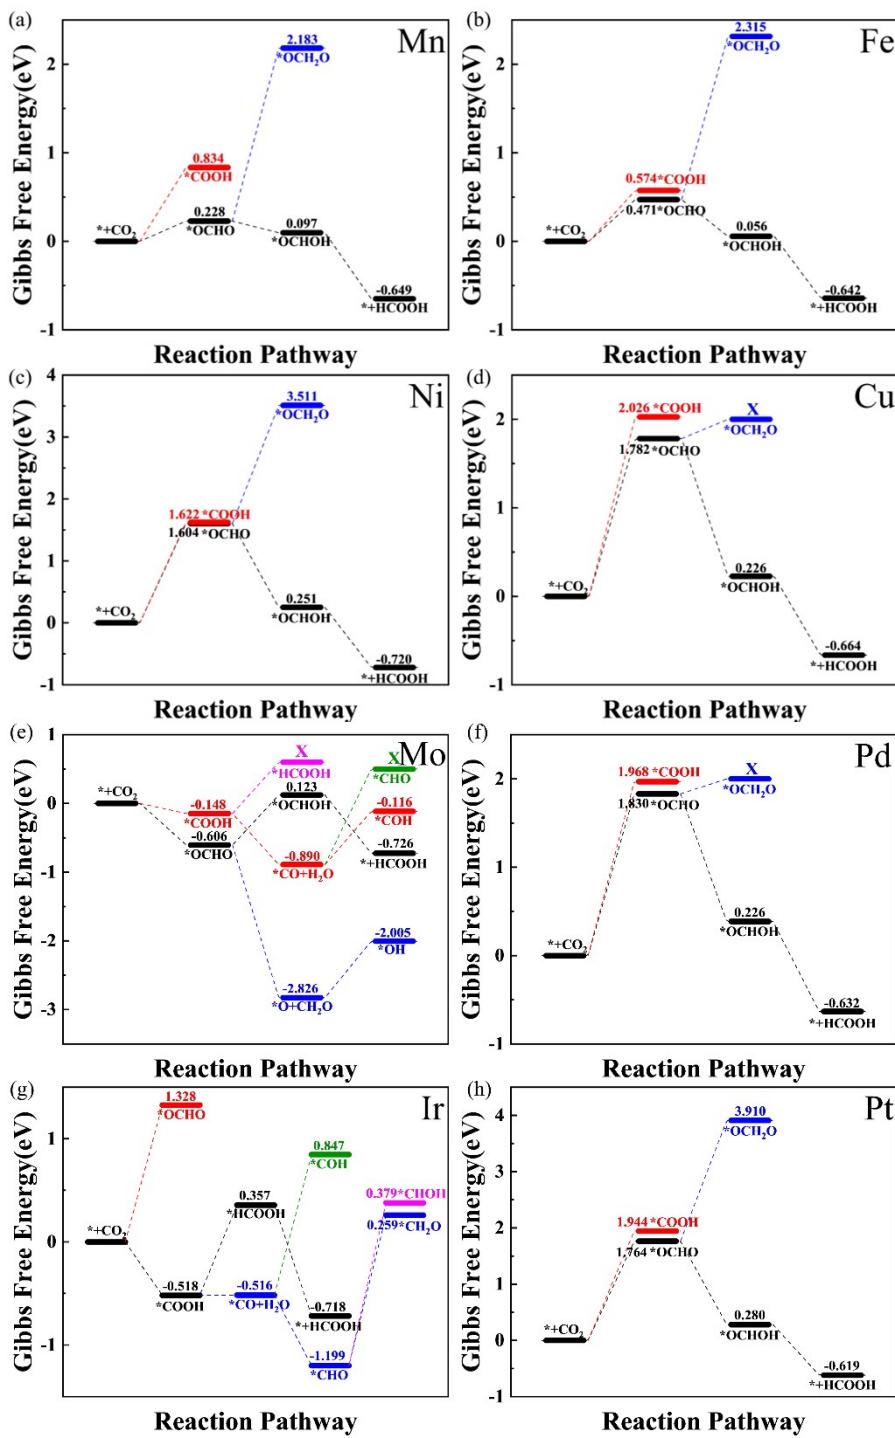

Fig. S5 Gibbs free energy profiles for CO₂RR on (a)MnPP, (b)FePP, (c)NiPP, (d)CuPP, (e)MoPP, (f)PdPP, (g)IrPP and (h)PtPP at zero potential. The free energy zero is set as that of a CO₂ molecule in the gas phase and with a clean catalyst surface. The "X" in the profiles indicates that the intermediate is unstable. The black line is the most favorable pathway.

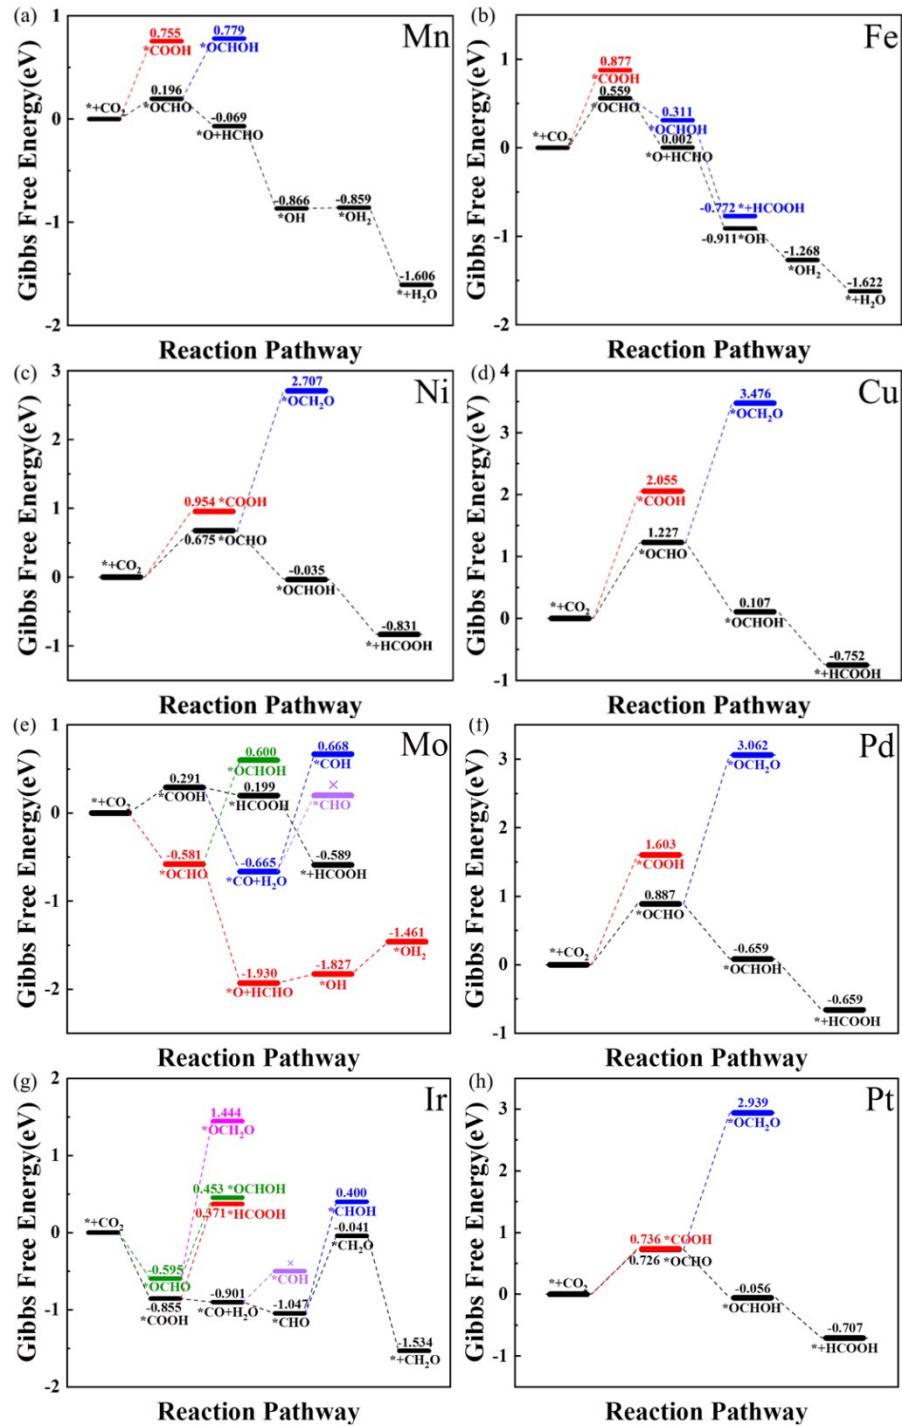

Fig. S6 Gibbs free energy profiles for CO₂RR on (a)MnClPP, (b)FeClPP, (c)NiClPP, (d)CuClPP, (e)MoClPP, (f)PdClPP, (g)IrClPP and (h)PtClPP at zero potential. The free energy zero is set as that of a CO₂ molecule in the gas phase and with a clean catalyst surface. The "X" in the profiles indicates that the intermediate is unstable. The black line is the most favorable pathway.

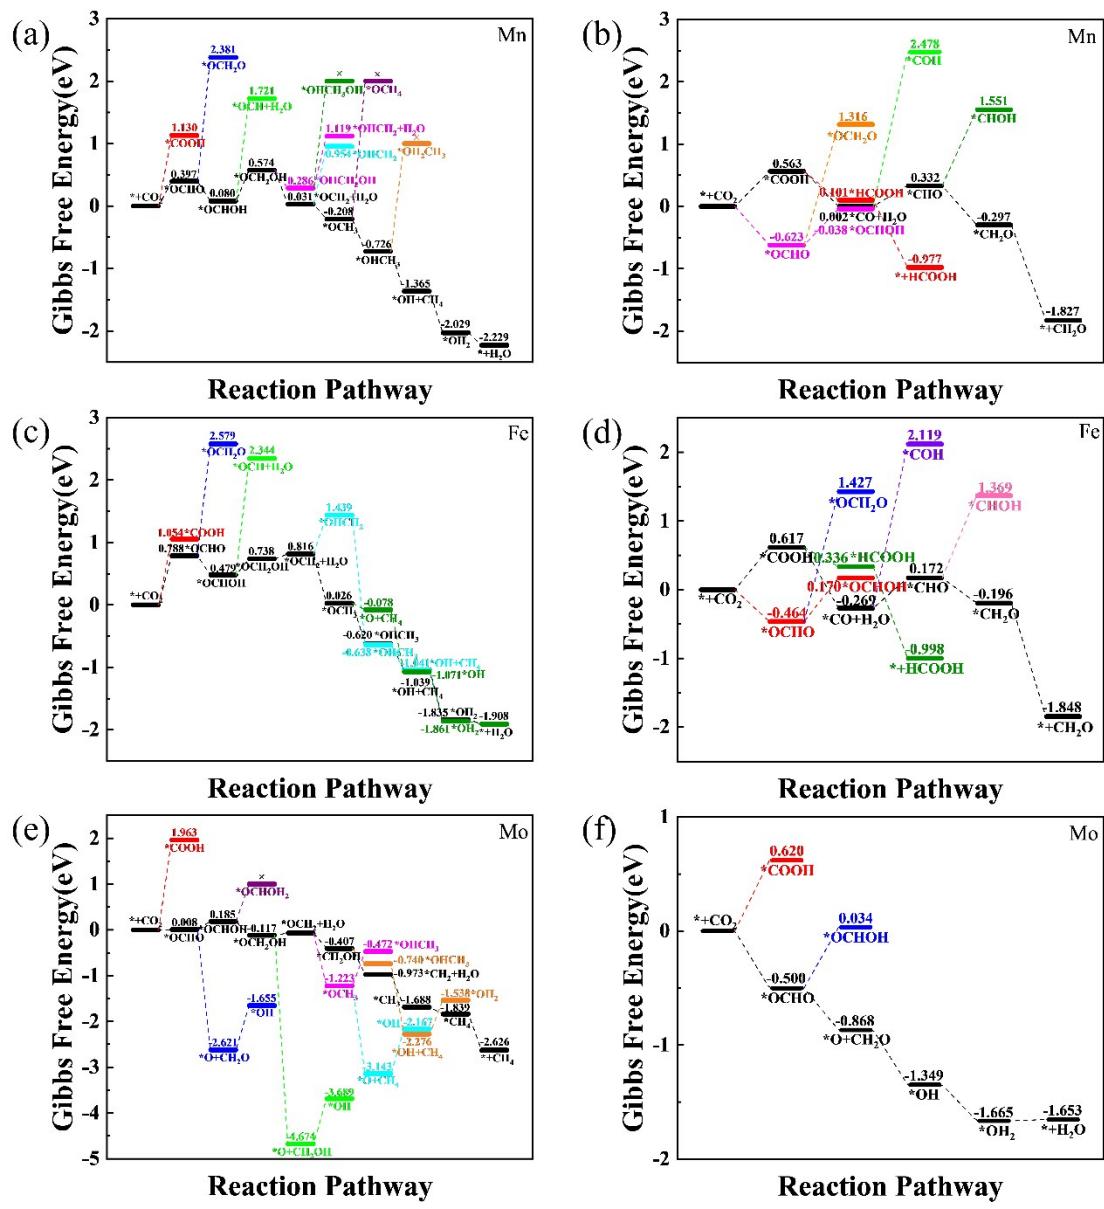

Fig. S7 Gibbs free energy profiles for CO₂RR on (a)MnNaPP, (b)MnSPP, (c)FeNaPP, (d)FeSPP, (e)MoNaPP and (f)MoSPP at zero potential. The free energy zero is set as that of a CO₂ molecule in the gas phase and with a clean catalyst surface. The "X" in the profiles indicates that the intermediate is unstable. The black line is the most favorable pathway.
