Plot statistics

Residues in most favoured regions [A, B, L]	347	86.1%
Residues in additional allowed regions [a,b,l,p]	46	11.4%
Residues in generously allowed regions [~a,~b,~l,~p]	4	1.0%
Residues in disallowed regions	6	1.5%
	----	-----
Number of non-glycine and non-proline residues	403	100.0%
Number of end-residues (excl. Gly and Pro)	2	
Number of glycine residues (shown as triangles)	52	
Number of proline residues	37

SUPPLEMENTARY FIGURE

Figure S1: Multiple sequence alignment (MSA) of the retrieved sequences of spike glycoprotein using MUSCLE tools of MEGA-X. Letters within the rectangular indicated the non-conserved areas and dots indicated the conserved regions.

The figure consists of two vertically stacked screenshots of the MX: Sequence Data Explorer software interface, showing multiple sequence alignments (MSA) of spike glycoprotein sequences.

Top Screenshot: This screenshot shows a rectangular selection (highlighted by a red box) around the first 10 positions of the sequences. The alignment shows various amino acid residues at these positions across seven sequences. Conserved regions are indicated by dots, while non-conserved regions are indicated by letters within the highlighted area.
