**Fig. S1**

**Fig. S2**

**Fig. S2** Schematic of energy bands for PbTe (band gap  $E_{g1}$ ) and BST (band gap  $E_{g0}$ ) as well as heterojunction potentials (where  $E_{C0}$  and  $E_{C1}$  are conduction band bottoms;  $E_{V0}$  and  $E_{V1}$  are valence band tops).

**Table S1**

List of the relative density  $d_r$  and the Lorenz number  $L$  at room temperature for  $\chi(\text{PbTe})/\text{BST}$  ( $\chi = 0, 0.25, 0.5$  and  $1.0$  wt.%).

$\chi(\text{wt.}\%)$	$d_r(\%)^a$	$L^b$
0	97	1.46
0.25	97	1.51
0.5	96	1.55
1	98	1.59

<sup>a</sup> $d_r$  is relative density, defined as  $d_r = d/d_0$ , where  $d$  is measured density and  $d_0 (= 6.76\text{g/cm}^3)$  is theoretical density of BST. For the composite samples  $\chi(\text{PbTe})/\text{BST}$ , its theoretical density is modified as:  $d_0 = (1-f)d_1 + fd_2$ , here  $d_1 = d_0$  for BST and  $d_2 (= 8.15\text{ g/cm}^3)$  is theoretical density of PbTe.

<sup>b</sup> $L$  is the Lorenz number.

**Table S2**

Parameters for the calculation of lattice thermal conductivity by using Callaway model

Line	A ( $10^{-40} \text{ S}^3$ )	B ( $10^{-18} \text{ s/K}$ )	C ( $10^{-16} \text{ s}$ )	<i>l</i> (nm)
<b>orange line</b>	0.69	9.92	1.94	-
<b>purple line</b>	0.69	9.92	1.94	126
<b>wine line</b>	1.41	9.92	1.94	126
