

“Supporting Information” of  
**Visual detection of *Cronobacter Sakazakii* on a microfluidic chip fabricated by  
3D molding method**

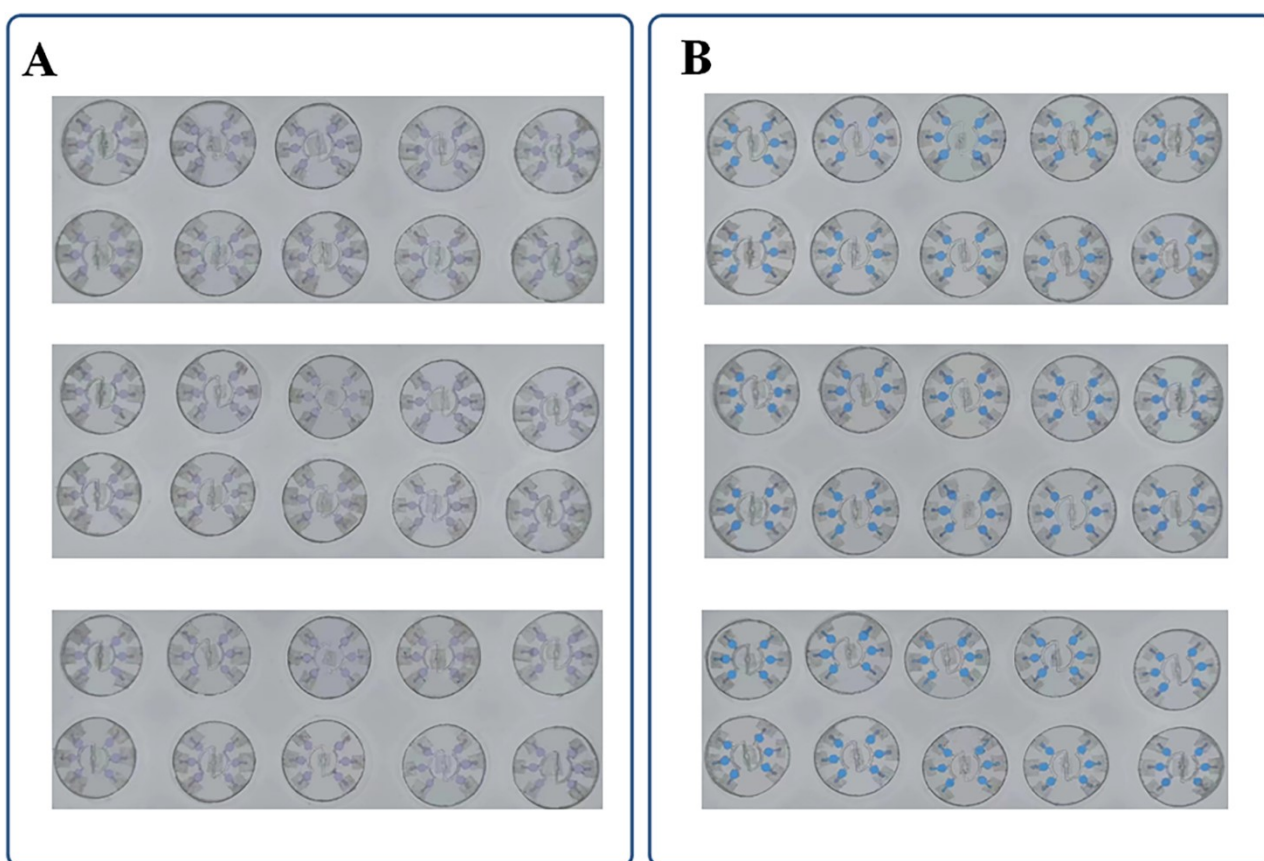

Fig. 1s A: thirty actual PIF samples collected from the local market were detected by the on-chip mCAMP; B: thirty actual PIF samples were artificially contaminated with *C. Sakazakii* ( $2.2 \times 10^3$  CFU/g) and detected by the on-chip mCAMP.
