## 1. Materials and methods

All the chemicals are commercially available, and used without further purification. All solvents were dried and distilled according to conventional methods.

Power X-ray diffraction (PXRD): PXRD patterns were collected on an X-ray diffraction (XRD) system (DX-27mini, China) using $\mathrm{Cu} \mathrm{K} \alpha$ radiation.

Fourier transform infrared (FT-IR): IR spectrum was measured on an IR spectrometer (Nicolet 6700) between the ranges of 4000 to $400 \mathrm{~cm}^{-1}$.

Solution nuclear magnetic resonance (NMR): Liquid state ${ }^{1} \mathrm{H}$ nuclear magnetic resonance spectroscopy was collected on a Varian Mercury Plus 400 NMR Spectrometer. Liquid State ${ }^{13} \mathrm{C}$ nuclear magnetic resonance spectroscopy was collected on a Bruker Ascend ${ }^{\mathrm{TM}} 400 \mathrm{MHz}$ NMR Spectrometer.

High resolution mass spectrometry (HRMS): The electrospray ionization mass spectrometry (ESI-MS) spectra were recorded using an Sciex X500R QTOF MS spectrometer.

Solid-state nuclear magnetic resonance (ssNMR): Solid-state nuclear magnetic resonance (NMR) data were performed on a Bruker AVANCE III 600 spectrometer with cross-polarization magic-angle-spinning (CP/MAS) at a resonance frequency of $150.9 \mathrm{MHz} .{ }^{13} \mathrm{C} C P / \mathrm{MAS}$ NMR spectra were recorded using a 4 mm MAS probe and a spinning rate of 12 kHz . A contact time of 4 ms and a recycle delay of 2 s were used for the ${ }^{13} \mathrm{C} C P / M A S$ NMR measurement. The chemical shifts of ${ }^{13} \mathrm{C}$ were externally referenced to tetramethylsilane (TMS).

Elemental analyses (EA): Elemental analyses were performed on an Elementar vario MICRO UNICUBE series CHN elemental analyzer.

Scanning electron microscope (SEM): SEM images were collected using a GeminiSEM 500 system.

Transmission electron microscope (TEM): TEM images were obtained with a Tecnai G2 F30 STwin.

Thermogravimetric analysis (TGA): TGA was performed using a TA Q5000 under flowing $\mathrm{N}_{2}$ with $20 \mathrm{~K} \mathrm{~min}^{-1} \mathrm{ramp}$ rate. Samples were heated in a Platinum pan $\left(700{ }^{\circ} \mathrm{C}, 20^{\circ} \mathrm{C} \mathrm{min}{ }^{-1}\right)$ under a $\mathrm{N}_{2}$ flux ( $25 \mathrm{~mL} \mathrm{~min}{ }^{-1}$ ).

[^1]Crystal structure modeling : Structural modeling of COFs was generated using the Materials Studio ${ }^{\text {S1 }}$ program employing the Building (Crystal) module, the lattice model was geometrically optimized using force-filed based method (Forcite molecular dynamics module) and SCC-DFTB (DFTB + module). The Pawley fitting (Reflex module) was performed to optimize the lattice parameters iteratively until the Rwp value converges and the overlay of the observed with refined profiles shows good agreement. Powder indexing and Rietveld refinement were performed using EXPO2014 ${ }^{\mathrm{S} 2}$ various topology structures were illustrated by VESTA software ${ }^{\mathrm{S} 3}$.

Fluorescence detection: In a typical experimental setup, 1 mg of TPE-DBC-COF nanosheets were sonicated and dispersed in 2 mL of acetone. Then $20 \mu \mathrm{~L}$ of tetracycline hydrochloride solution with gradient concentration ( n mM ) were added. Fluorescence (FL) spectra of the mixed solutions with $\mathrm{nx} 10^{-2} \mathrm{mM}$ concentration of tetracycline hydrochloride were then collected using with a Hitachi F4600 fluorescence spectrophotometer with excitation wavelength of 365 nm and emission slit of 5 nm . All detective experiments were performed 3 times and reported consistent results.

The fluorescence detection of chloramphenicol and carbamazepine using TPE-DBC-COF nanosheets were performed under the same protocol except the chloramphenicol and carbamazepine were dissolved in acetone.

## 2. Synthesis and general procedures

### 2.1 Synthesis of monomers

TPE-PhNH 2
Scheme S1. 4',4"',4""',4""""-(ethene-1,1,2,2-tetrayl)tetrakis(([1,1'-biphenyl]-4-amine)) (TPE$\mathbf{P h N H}_{2}$ ).

4',4"',4""', 4 """"-(ethene-1,1,2,2-tetrayl)tetrakis(([1,1'-biphenyl]-4-amine)) (TPE-PhNH $\mathbf{2}^{\text {) }}$ was synthesized according to a previously published procedure. ${ }^{\text {S4 }} 1,1,2,2$-tetrakis(4-bromophenyl)ethene $(1.00 \mathrm{~g}, 1.55 \mathrm{mmol}), 4$-aminophenylboronic acid pinacol ester ( $2.72 \mathrm{~g}, 12.4 \mathrm{mmol}$ ), $\mathrm{K}_{2} \mathrm{CO}_{3}(2.57 \mathrm{~g}$, $18.60 \mathrm{mmol})$, and $\mathrm{Pd}\left(\mathrm{PPh}_{3}\right)_{4}(0.18 \mathrm{~g}, 0.16 \mathrm{mmol})$ were mixed in a 250 mL single neck flask, then Tetrahydrofuran $(120 \mathrm{~mL})$ and $\mathrm{H}_{2} \mathrm{O}(40 \mathrm{~mL})$ were added. The mixture was heated at $80^{\circ} \mathrm{C}$ for 24 h under nitrogen atmosphere and then cooled to room temperature, followed by extraction with dicholomethane. After the organic phase was washed with brine and dried over $\mathrm{MgSO}_{4}$, the organic solvent was removed under reduced pressure. TPE-PhNH $\mathbf{2}$ was purified by column chromatography (EA/petroleum ether, $2 / 1$ ) and obtained as a yellow solid ( 0.61 g , yield: $57 \%$ ).

Scheme S2. 4, 4', 4",4"'-(dibenzo[g,p]chrysene-2,7,10,15-tetrayl)tetraaniline (DBC-PhNH $\mathbf{2}^{2}$ ).
4,4',4",4"'-(dibenzo[g,p]chrysene-2,7,10,15-tetrayl)tetraaniline (DBC-PhNH $\mathbf{2}$ ) was conducted vis the Suzuki reaction. 2,7,10,15-tetrabromodibenzo[g,p]chrysene (1.00g, 1.56 mmol ), 4aminophenylboronic acid pinacol ester ( $2.72 \mathrm{~g}, 12.4 \mathrm{mmol}$ ), $\mathrm{K}_{2} \mathrm{CO}_{3}(2.57 \mathrm{~g}, 18.6 \mathrm{mmol})$, and $\operatorname{Pd}\left(\mathrm{PPh}_{3}\right)_{4}(0.18 \mathrm{~g}, 0.16 \mathrm{mmol})$ were mixed in a 250 mL single neck flask, then Tetrahydrofuran ( 120 $\mathrm{mL})$ and $\mathrm{H}_{2} \mathrm{O}(40 \mathrm{~mL})$ were added. The mixture was heated at $80{ }^{\circ} \mathrm{C}$ for 24 h under nitrogen atmosphere and then cooled to room temperature, followed by extraction with dicholomethane. After the organic phase was washed with brine and dried over $\mathrm{MgSO}_{4}$, the organic solvent was removed under reduced pressure. DCB- $\mathbf{P h N H}_{2}$ was purified by column chromatography (dicholomethane/methanol, 20/1) and obtained as a yellow solid ( 0.53 g , yield: $49.1 \%$ ). ${ }^{1} \mathrm{H}$ NMR ( 400 MHz, DMSO-d ${ }^{6}$ ): $\delta 8.98(\mathrm{~s}, 4 \mathrm{H}), 8.61(\mathrm{~d}, 4 \mathrm{H}), 7.91(\mathrm{~d}, 4 \mathrm{H}), 7.72(\mathrm{~d}, 8 \mathrm{H}), 6.71(\mathrm{~d}, 8 \mathrm{H}), 5.31(\mathrm{~s}, 8 \mathrm{H})$.
${ }^{13} \mathrm{C}$ NMR (400 MHz, DMSO-d ${ }^{6}$ ): $\delta 149.17,139.38,131.30,129.25,128.35,127.44,127.14 .126 .34$, 125.28, 120.24, 114.78. HRMS (ESI + ): $\mathrm{m} / \mathrm{z}$ : Calcd for [ $\left.\mathrm{C}_{50} \mathrm{H}_{36} \mathrm{~N}_{4}+1 \mathrm{H}^{+}\right]$: 693.2940, found 693.2999 .

Figure S1. ${ }^{1} \mathrm{H}$ NMR spectra of $\mathbf{D B C}-\mathbf{P h N H}_{2}$. Solvent peaks of $\mathrm{H}_{2} \mathrm{O}$ (a), DMSO (b).

Figure S2. ${ }^{13} \mathrm{C}$ NMR spectra of $\mathbf{D B C}-\mathbf{P h N H}_{2}$.

Figure S3. HRMS spectra of DBC-PhNH $\mathbf{2}_{2}$.

### 2.2 Synthesis and characterization of COFs

TPE-TPE-COF: TPE-PhNH $2(27.9 \mathrm{mg}, 0.04 \mathrm{mmol})$ and TPE-CHO $(17.8 \mathrm{mg}, 0.04 \mathrm{mmol})$ were added into a glass ampoule with Mesitylene $(0.6 \mathrm{~mL})$ and Dioxane $(0.6 \mathrm{~mL})$. The solution was sonicated for 5 minutes to obtain light yellow turbid solution. 6 M acetic acid $(0.6 \mathrm{~mL})$ were added into the glass ampoule as catalyst. The glass ampoule was flash frozen at 77 K using the liquid nitrogen bath and degassed by freeze-pump-thaw three times, and then sealed. The glass ampoule was placed in an oven at $120^{\circ} \mathrm{C}$ for 4 days. The yellow solid was isolated by centrifugation and washed with N , N -dimethylacetamide ( $3 \times 10 \mathrm{~mL}$ ) and acetone $(3 \times 10 \mathrm{~mL})$. The resulting precipitate was filtered then exhaustively washed with tetrahydrofuran and acetone by Soxhlet extraction for 48 hours. The sample was then transferred to vacuum chamber and evacuated to 20 mTorr at $80^{\circ} \mathrm{C}$ for 24 h , yielding yellow powder TPE-TPE-COF (Yield: $40.73 \mathrm{mg}, 90.5 \%$ ). Elemental analysis of TPE-TPE-COF with a molecular formula of $\left(\mathrm{C}_{80} \mathrm{H}_{52} \mathrm{~N}_{4}\right)_{\mathrm{n}}(\%$ Calc/Found: C 89.89/89.73, H 4.87/4.91, N 5.24/5.36).

TPE-DCB-COF: DCB-PhNH 2 ( $27.71 \mathrm{mg}, 0.04 \mathrm{mmol}$ ) and TPE-CHO ( $17.8 \mathrm{mg}, 0.04 \mathrm{mmol}$ ) were weighed into a glass ampoule with Mesitylene $(0.6 \mathrm{~mL})$ and Dioxane $(0.6 \mathrm{~mL})$. The solution was sonicated for 5 minutes to obtain light yellow turbid solution. 6 M acetic acid ( 0.2 mL ) was added into the glass ampoule as catalyst. The glass ampoule was flash frozen at 77 K using the liquid nitrogen bath and degassed by freeze-pump-thaw three times, and then sealed. The glass ampoule was placed in an oven at $120^{\circ} \mathrm{C}$ for 4 days. The yellow solid was isolated by centrifugation and washed with $\mathrm{N}, \mathrm{N}$-dimethylacetamide $(3 \times 10 \mathrm{~mL})$ and acetone $(3 \times 10 \mathrm{~mL})$. The resulting precipitate was filtered then exhaustively washed with tetrahydrofuran and acetone by Soxhlet extraction for 48 hours. The sample was then transferred to vacuum chamber and evacuated to 20 mTorr at $80^{\circ} \mathrm{C}$ for

24 h , yielding yellow powder TPE-DCB-COF (Yield: $38.65 \mathrm{mg}, 86.3 \%$ ). Elemental analysis of TPE-DCB-COF with a molecular formula of $\left(\mathrm{C}_{80} \mathrm{H}_{48} \mathrm{~N}_{4}\right)_{\mathrm{n}}(\%$ Calc/Found: C 90.23/90.33, H 4.51/4.27, N 5.26/5.40).

Figure S14. Fluorescence images of TPE-DBC-COF dispersed in acetone solution in the presence of different concentrations of tetracycline hydrochloride, using 365 nm illumination.

Figure S15. (a) Fluorescence quenching experiments of the TPE-DBC-COF upon addition of chloramphenicol ( $0.01-0.12 \mathrm{mM}$ ) in acetone. (b) Quantitative fitting curve of the fluorescence quenching process of TPE-DBC-COF nanosheets by chloramphenicol, the fitted curve is $\mathrm{I}_{0} / \mathrm{I}=1.16$ $-11.15 \times \mathrm{C}_{\text {chloramphenicol }}+447.54 \times \mathrm{C}_{\text {chloramphenicol }}{ }^{2}$.

Figure S16. (a) Fluorescence quenching experiments of the TPE-DBC-COF upon addition of carbamazepine ( $0.01-0.12 \mathrm{mM}$ ) in acetone. (b) Quantitative fitting curve of the fluorescence quenching process of TPE-DBC-COF nanosheets by carbamazepine, the fitted curve is $\mathrm{I}_{0} / \mathrm{I}=1.00-$ $2.01 \times \mathrm{C}_{\text {carbamazepine }}+18.52 \times \mathrm{C}_{\text {carbamazepine }}{ }^{2}$.

Figure S17. Fluorescence quenching images of TPE-DBC-COF by adding tetracycline hydrochloride and fluorescence recovery by adding NaOH solution.

As shown in Figure S17, in order to verify the electron transfer mechanism, the fluorescence of TPE-DBC-COF nanosheets were firstly quenched with 0.2 mM tetracycline hydrochloride, and then an equivalent of NaOH solution was added to the system. The addition of NaOH can effectively block the charge transfer process via eliminating the lack of electricity of tetracycline hydrochloride, and the fluorescence of TPE-DBC-COF nanosheets was recovered, confirming the proposed charge transfer mechanism.

Figure S18. (a) Fluorescence quenching experiments of TPE-DBC-COF nanosheets toward 0.1 mM tetracycline hydrochloride for continuous 5 cycles. (b) Fluorescence quenching experiments of TPE-DBC-COF nanosheets upon addition of different antibiotics ( 0.1 mM ). Inset: fluorescence quenching images. $\mathrm{I}_{0}$ and I are the luminescence intensity of TPE-DBC-COF nanosheets before and after addition of antibiotics, using 365 nm illumination.

[^1]:    Atomic force microscopy (AFM): AFM image were recorded using a Bruker Dimension Edge AFM in tapping mode and processed by Nanoscope Analysis.

    Fluorescence Spectra and Quantum Yield: Fluorescence spectra were recorded with a Hitachi F-4600 fluorescence spectrophotometer. The fluorescence quantum yield was measured with an Absolute PL quantum Yield Spectrometer QY C11347-01, 02.
