**Table S1** Binding energies of XPS spectra for the catalysts employed in this study

| Catalyst   | Binding energy (eV)               |                                   |       | $\Delta E_{\text{Ni-Si}}^b$ |
|------------|-----------------------------------|-----------------------------------|-------|-----------------------------|
|            | Ni 2p <sub>1/2</sub> <sup>a</sup> | Ni 2p <sub>3/2</sub> <sup>a</sup> | Si 2p |                             |
| Ni-DML-100 | 873.8                             | 856.2                             | 103.2 | 753.0                       |
| Ni-DML-120 | 874.1                             | 856.2                             | 103.1 | 753.1                       |
| Ni-DML-140 | 874.1                             | 856.6                             | 103.6 | 753.0                       |
| Ni-DML-160 | 874.3                             | 856.6                             | 102.6 | 754.0                       |
| Ni-DML-180 | 873.9                             | 856.4                             | 102.9 | 753.5                       |
| Ni/B-MWW   | 876.0 (32)                        | 856.5 (36)                        | 103.5 | 753.0                       |
|            | 872.9 (68)                        | 854.5 (64)                        |       | 751.0                       |

<sup>a</sup> The values in parentheses indicate the relative area ratios. <sup>b</sup> Difference in Ni 2p<sub>3/2</sub> and Si 2p binding energies.

**Table S2** Comparison of TOF for catalysts prepared in this and previous studies

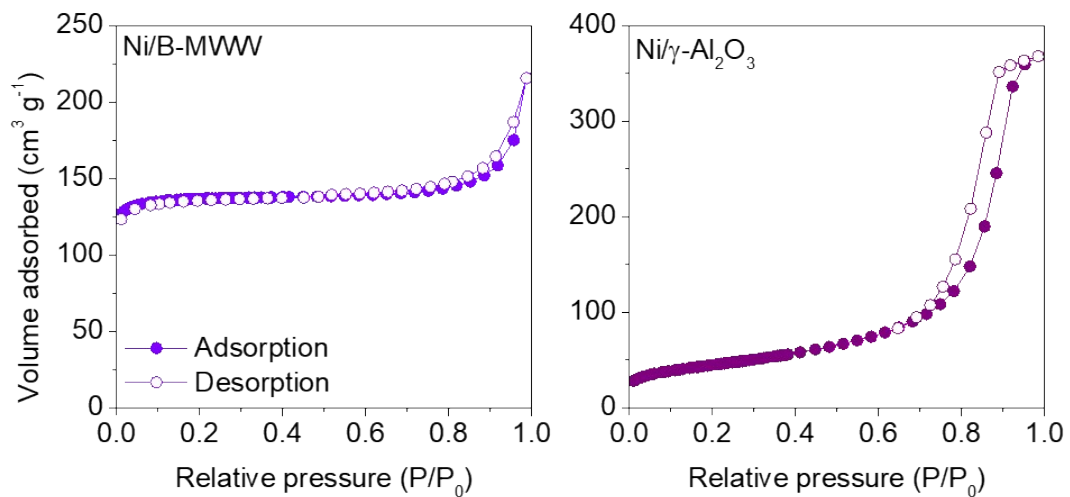

| Catalyst   | CO <sub>2</sub> hydrogenation conditions |  |   | Ref.       |
|--|--|--|---|------------|
|  | Temp. (°C)                               | GHSV (cm <sup>3</sup> g <sub>-cat.</sub> <sup>-1</sup> h <sup>-1</sup> ) | TOF (CO <sub>2</sub> ) (s <sup>-1</sup> ) |            |
| Ni-DML-100   | 330                                      | 84,000   | 0.008                                     | This study |
