. Supplementary figures

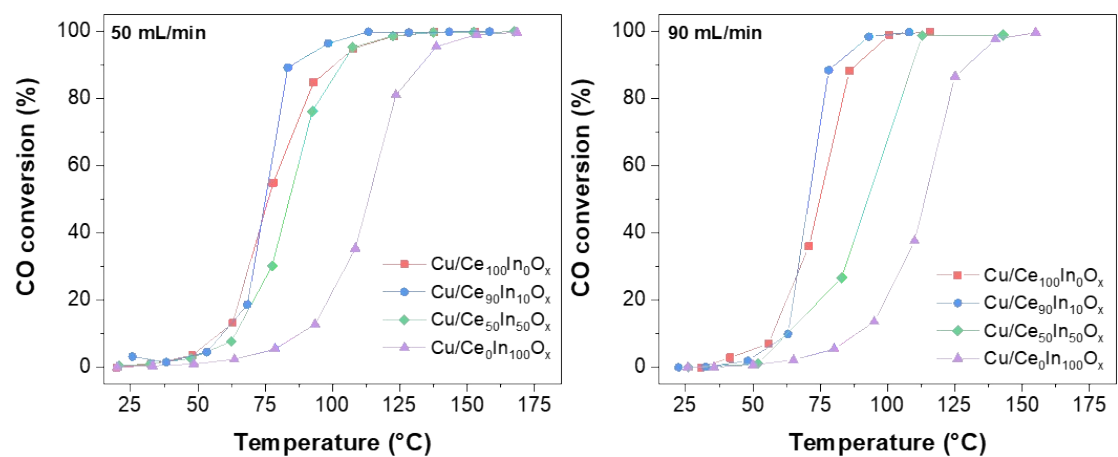

**Figure S1.** N<sub>2</sub> adsorption/desorption isotherms and pore size distributions of CeInO<sub>x</sub> (a-b) supports and Cu/CeInO<sub>x</sub> (c-d) catalysts.

**Figure S2.** XPS spectra of the catalysts showing the (a) O 1s, (b) In 3d regions.

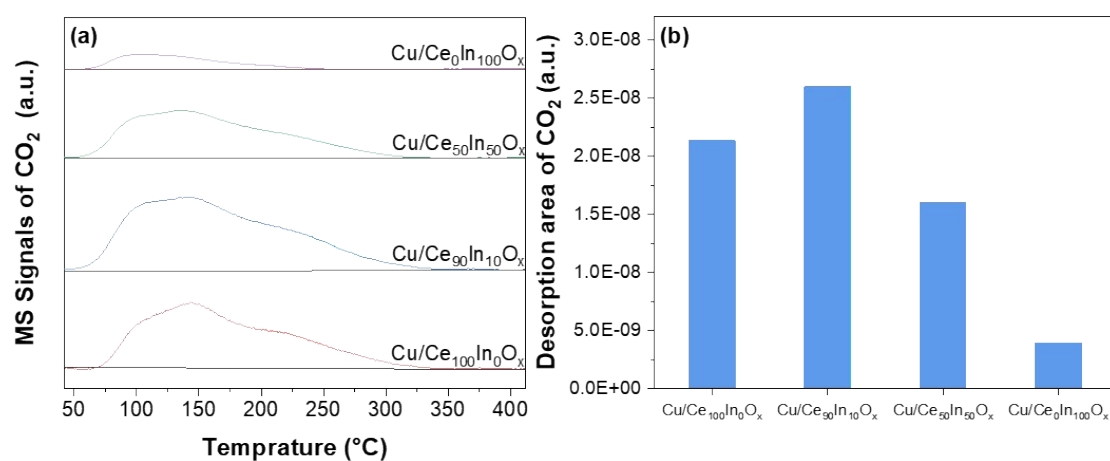

**Figure S3.** (a) Specific reaction rate and (b) TOF in the absence of 3 vol.% H<sub>2</sub>O over Cu/CeInO<sub>x</sub> catalysts at 90 °C. (c) Effect of H<sub>2</sub>O on CO conversion over Cu/CeInO<sub>x</sub> catalysts.

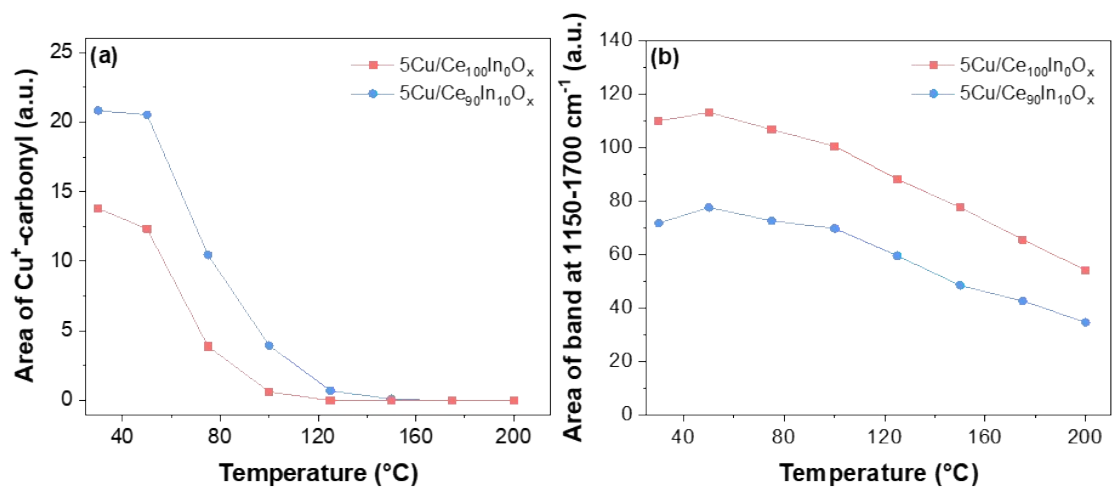

**Figure S4.** CO conversion of Cu/CeInO<sub>x</sub> catalysts at different flow rates (50 and 90 mL·min<sup>-1</sup>).

CO-TPD was also performed using the same micro-fixed-bed reactor connected to a GC-QMS (HPR-20, Hiden Analytical Ltd.). The pretreatment procedure was identical to the H<sub>2</sub>-TPR experiment. First, 50 mg catalyst was cooled down to room temperature in flowing Ar (Air Liquid, 99.999%). The catalyst was then saturated under a CO flow (1%CO/Ar) for 1 h and purged with Ar for 1.5 h to remove physically adsorbed CO molecules. The temperature was then ramped up to 850 °C at a rate of 10 °C·min<sup>-1</sup>.

**Figure S5.** (a) CO-TPD profiles of Cu/CeInO<sub>x</sub> catalysts. (b) Desorption area of CO<sub>2</sub> during CO-TPD over Cu/CeInO<sub>x</sub> catalysts.

**Figure S6.** Integrated area of (a) CO-Cu<sup>+</sup> species and (b) the carbon-containing species in the 1150-1700 cm<sup>-1</sup> range as a function of the reaction temperature.

Scanning transmission electron microscopy (STEM) measurement was carried out on a ThermoFisher Talos F200X (Figure S7). Energy-dispersive X-ray spectroscopy (EDX) measurement was performed using 4 in-column Super-X detectors (Figure S8).

**Figure S7.** TEM images and the size distribution of different catalysts: (a, e) Cu/Ce<sub>100</sub>In<sub>0</sub>O<sub>x</sub>, (b, f) Cu/Ce<sub>90</sub>In<sub>10</sub>O<sub>x</sub>, and (c, g) Cu/Ce<sub>0</sub>In<sub>100</sub>O<sub>x</sub>.

**Figure S8.** EDX-Mapping results of (a) Cu/Ce<sub>90</sub>In<sub>10</sub>O<sub>x</sub>, (b) Cu/Ce<sub>100</sub>In<sub>0</sub>O<sub>x</sub>, and (c) Cu/Ce<sub>0</sub>In<sub>100</sub>O<sub>x</sub>. The yellow, green, blue and red represent Cu, In, Ce and O, respectively.

## Supplementary tables

**Table S1**

The BET surface area, Barrett Joiner Halenda (BJH) pore volume, and pore size for the supports and catalysts.

Sample	Surface area (m <sup>2</sup> /g)	Pore volume (cm <sup>3</sup> /g)	Pore size (nm)
Ce <sub>100</sub> In <sub>0</sub> O <sub>x</sub>	20.9	0.067	10.6
Ce <sub>90</sub> In <sub>10</sub> O <sub>x</sub>	24.3	0.068	9.1
Ce <sub>50</sub> In <sub>50</sub> O <sub>x</sub>	30.3	0.181	20.4
Ce <sub>0</sub> In <sub>100</sub> O <sub>x</sub>	60.0	0.401	20.4
Cu/Ce <sub>100</sub> In <sub>0</sub> O <sub>x</sub>	66.7	0.118	6.9
Cu/Ce <sub>90</sub> In <sub>10</sub> O <sub>x</sub>	66.3	0.159	8.8
Cu/Ce <sub>50</sub> In <sub>50</sub> O <sub>x</sub>	48.5	0.148	11.4
Cu/Ce <sub>0</sub> In <sub>100</sub> O <sub>x</sub>	49.5	0.281	19.2

**Table S2**

The unit cell parameters and particle size of the supports and catalysts as determined by TOPAS. Results of the Sample Characterization by XRD.

Sample	CeO <sub>2</sub> lattice parameters (nm)	particle size (nm)	
		CeO <sub>2</sub>	In <sub>2</sub> O <sub>3</sub>
Ce <sub>100</sub> In <sub>0</sub> O <sub>x</sub>	0.5419	7.7	-
Ce <sub>90</sub> In <sub>10</sub> O <sub>x</sub>	0.5416	8.2	-
Ce <sub>50</sub> In <sub>50</sub> O <sub>x</sub>	0.5401	7.1	15.2
Ce <sub>0</sub> In <sub>100</sub> O <sub>x</sub>	-	-	16.8
Cu/Ce <sub>100</sub> In <sub>0</sub> O <sub>x</sub>	0.5418	7.9	-
Cu/Ce <sub>90</sub> In <sub>10</sub> O <sub>x</sub>	0.5419	7.2	-
Cu/Ce <sub>50</sub> In <sub>50</sub> O <sub>x</sub>	0.5399	7.3	15.3
Cu/Ce <sub>0</sub> In <sub>100</sub> O <sub>x</sub>	-	-	17.0

**Table S3**

Quantified XPS Results for the catalysts.

Catalyst	Cu (mol %)	Ce <sup>3+</sup> /Ce (%)	I <sub>sat</sub> /I <sub>pp</sub>	Cu <sup>+</sup> /Cu (%)
Cu/Ce <sub>100</sub> In <sub>0</sub> O <sub>x</sub>	9.07	20.9	0.128	60.4
Cu/Ce <sub>90</sub> In <sub>10</sub> O <sub>x</sub>	10.29	21.3	0.098	66.7
Cu/Ce <sub>50</sub> In <sub>50</sub> O <sub>x</sub>	7.27	13.6	0.125	59.0
Cu/Ce <sub>0</sub> In <sub>100</sub> O <sub>x</sub>	4.43	-	0.114	55.6

**Table S4**

The residual Na content of the Cu/Ce<sub>90</sub>In<sub>10</sub>O<sub>x</sub> and Cu/Ce<sub>50</sub>In<sub>50</sub>O<sub>x</sub> catalyst by ICP-OES.

Catalyst	0722-Na (wt.%)	0915-Na (wt.%)
Cu/Ce <sub>90</sub> In <sub>10</sub> O <sub>x</sub>	0.421	0.295
Cu/Ce <sub>50</sub> In <sub>50</sub> O <sub>x</sub>	0.381	0.095

**Figure S9.** CO conversion of the Cu/Ce<sub>90</sub>In<sub>10</sub>O<sub>x</sub> and Cu/Ce<sub>50</sub>In<sub>50</sub>O<sub>x</sub> catalysts with different residual Na.

We have determined the residual Na content of the Cu/Ce<sub>90</sub>In<sub>10</sub>O<sub>x</sub> and Cu/Ce<sub>50</sub>In<sub>50</sub>O<sub>x</sub> catalysts prepared on July 22 and September 15 by ICP-OES (PE Avio200) (Table S4). ICP results show that the extensive washing step somewhat successfully removes Na. Steady-state activity measurements reveal that removal (or partial removal) of Na from these catalysts shows almost negligible impact on the CO oxidation activity especially under lower temperatures (Figure S9).
