

S-Table 1. The sequences of the primers used for quantitative real-time PCR

Genes	Forward	Reverse
PRDM16	cagcaacctccagcgtcacatc	gcgaaggtcttgccacagtacg
TBX1	caccaaggcaggcagacgaatg	ctacgggcacaaagtccatgagc
CPT1a	agccagactcctcagcagcag	caccatagccgtcatcagcaacc
MCAD	cgaagagttggcgtatgggtgtac	catcattggctgctccgtcatcc
PPAR $\alpha$	acgatgctgtcctcctgatgaac	gatgtcacagaacggcttctcag
PGC1 $\alpha$	gtgccaccgccaaccaagag	ttctcgtgtcctcggtgag
ATGL	acaccagcatccagttcaacctc	gtccatctctgtagccctgtttgc
HSL	gcacggcggtgttctaatgtc	cgttggctggtgtctctgtgtc
TFAM	tgtggagggagctaccagaagc	gtctctgccgggctcctc
NRF1	tctgctgtggctgatggagagg	gatgcttgcgtcgtctggatgg
NRF2	caaccggaagcacgctgaagg	ggacgctcggctgggactc
TMEM26	cctggtcggcgtctggagag	gcctcgtccgcgcttgaac
CD137	gctgctgctagtgggctgtg	cagttcggtgtccacctatgc
HOXC8	gcaagagggcagcgtggtg	tgaggctgggagacgagttctg
UCP1	caccacactcctggcctctcc	acatggacatcgcacagcttgg
Cidea	ggagaccgccaggactacg	agggcgagctggatgtatgagg
$\beta$ -actin	gtcctcaccctccaaaag	gctgcctcaacacctcaacc

S-Figure 1. Effects of antibiotics treatment on body weight and browning in NG treated HFD fed mice. (A) Body weight for each group mice (n = 6). (B) The weight of iWAT, eWAT and liver (n = 6). (C) The expression of thermogenic-related genes (UCP1, PRDM16, and Cidea) in iWAT for each group mice (n = 4). (D) The expression of fatty acid oxidation-related genes (PGC1 $\alpha$ , PPAR $\alpha$ , CPT1 $\alpha$ ) in iWAT for each group mice (n = 4). Results are presented as mean  $\pm$  SD.
