## Solubility test of Ziram

Figure S1. Ziram solubility test of: $0.2 \mathrm{wt} . \%, 0.1 \mathrm{wt} . \%, 0.05 \mathrm{wt} . \%, 0.02 \mathrm{wt} . \%$, and $0.01 \mathrm{wt} . \%$ Ziram solutions at pH 8 .

Solubility test of IPBC

Figure S2. Digital photographs of the laser pointer test for IPBC solution samples at pH 8 after heating to 40 ${ }^{\circ} \mathrm{C}$ and lowering the temperature back to $25^{\circ} \mathrm{C}$. Concentrations from left to right: $0.005 \mathrm{wt} . \%, 0.008 \mathrm{wt} . \%$, $0.01 \mathrm{wt} . \%, 0.02 \mathrm{wt} . \%, 0.03 \mathrm{wt} . \%, 0.04 \mathrm{wt} . \%, 0.05 \mathrm{wt} . \%, 0.1 \mathrm{wt} . \%, 0.2 \mathrm{wt} . \%$ IPBC. Above $0.04 \mathrm{wt} . \% \mathrm{IPBC}$ the solution starts scattering light due to the presence of IPBC in a colloidal form.

## Zeta potential and particle hydrodynamic radius of

Carbopol nanogel loaded with Ziram and IPBC

LR01: Carbopol $0.1 \mathrm{wt} . \%$, Ziram 0.02 wt . \%, PDAC $0.005 \mathrm{wt} . \%$. LR02: Carbopol $0.1 \mathrm{wt} . \%$, Ziram 0.02 wt . \%, PDAC $0.005 \mathrm{wt} . \%$. LR03: Carbopol $0.1 \mathrm{wt} . \%$, Ziram 0.2 wt . \%, PDAC $0.01 \mathrm{wt} . \%$. LR04: Carbopol $0.1 \mathrm{wt} . \%$, Ziram 0.2 wt . \%, PDAC $0.01 \mathrm{wt} . \%$. LR05: Carbopol: 0.1 / IPBC: 0.005 / PDAC: 0.005

Figure S3. (A) The average particle hydrodynamic diameter and (B) zeta potential of the Carbopol Aqua SF1 nanogels loaded with various concentrations of the Ziram and coated with PDAC. (C) The average particle hydrodynamic diameter and (B) zeta potential of the Carbopol Aqua SF1 nanogels loaded with various concentrations of the IPBC and PDAC (error bars are the standard deviations).

The antimould activity of ziram and ziram-loaded Carbopol nanogels

Figure S4. The diameter growth of $P$. chrysogenum (A) and A. niger (B) over the period of 4 days on PDA media with various concentrations of the Ziram and PDAC.

## Method 1 - antimould agent on top of the growth media.

Figure S5. Digital photographs of the PGA-gel plates containing A. niger and P. chrysogenum and treated with free IPBC, IPBC encapsulated in $0.1 \mathrm{wt} . \%$ Carbopol, IPBC encapsulated in $0.1 \mathrm{wt} . \%$ Carbopol nanogel coated with $0.01 \mathrm{wt} . \%$ PDAC over the period of 7 days on PDA media. Method 1 was used for application of each of the antimould formulation. The growth is monitored every day at the same hour by measuring the diameter of the colony.

## Method 2 - antimould agent (nanocarriers suspensions) in the bulk of the growth media.

(Method 2) - antimould agent mixed with the growth Aspergillus niger
P. Chrysogenum

Figure S6. Digital photographs of the PDA gel plates containing A. niger and P. chrysogenum and treated with 3 different formulations of nanocarriers over the period of 7 days on PDA gel media. Method 2 consisted in preparing PDA media, autoclaving it, cooling to $40^{\circ} \mathrm{C}$ and then and mixing it with antimould nanocarriers suspension, and finally pouring it in each Petri dishes to set at room temperature. Then, a sterile filter paper disk ( 5 mm in diameter) impregnated with the mould suspension was put in the centre of each Petri dish.

Method 3 - antimould agent (nanocarriers suspensions) in the bulk and the surface of the growth media.

Figure S7. Digital photographs of the PDA-gel plates containing A. niger and treated with different formulations of nanocarriers over the period of 7 days on PDA gel media. Method 3 was used to apply the antimould formulations to the samples after which the mould colony growth was monitored for 7 days.

Table S1. Summary of the nanogel compositions studied for their antimould effect on $P$. chrysogenum and $A$. niger. The compositions of the Carbopol-loaded with Ziram- or IPBC with and without PDAC coating used.

| Mould | Ziram-loaded Nanogel |  | IPBC-loaded Nanogel |  |
| :---: | :---: | :---: | :---: | :---: |
|  | PDAC-coated | Non-coated | PDAC-coated | Non-coated |
| P. chrysogenum | $\begin{gathered} \text { Carbopol } 0.1 \\ \text { wt } \%+0.02 \mathrm{wt} \% \\ \text { Ziram }+0.01 \mathrm{wt} \% \\ \text { PDAC } \end{gathered}$ | Carbopol 0.1 wt $\%+0.02 \mathrm{wt} \%$ Ziram | Carbopol 0.1 <br> wt $\%+0.04 \mathrm{wt} \%$ <br> IPBC+0.01wt\% PDAC | Carbopol 0.1 wt $\%+0.02 \mathrm{wt} \%$ IPBC |
| A. niger | $\begin{gathered} \text { Carbopol } 0.1 \\ \text { wt } \%+0.02 \mathrm{wt} \% \\ \text { Ziram }+0.01 \mathrm{wt} \% \\ \text { PDAC } \end{gathered}$ | $\begin{gathered} \text { Carbopol } 0.1 \\ \mathrm{wt} \%+0.02 \mathrm{wt} \% \\ \text { Ziram } \end{gathered}$ | Carbopol 0.1 wt $\%+0.04 \mathrm{wt} \%$ IPBC+0.01wt\% PDAC | Carbopol 0.1 wt $\%+0.02 \mathrm{wt} \%$ IPBC |
