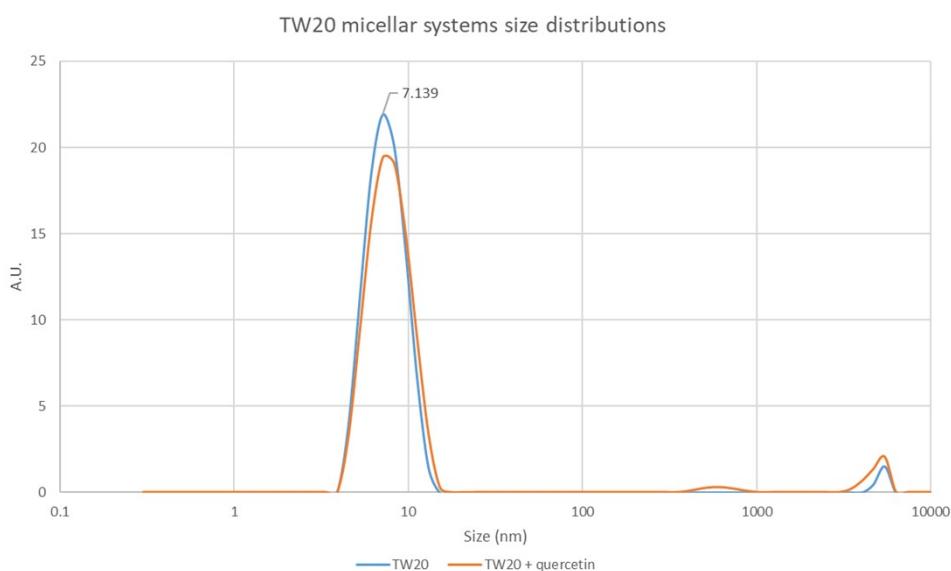

Figure S1 Size distribution of a micellar dispersion of TW20 4% in the absence (blue) and presence (orange) of quercetin. Micelles show a comparable dimension both in the presence or absence of quercetin.

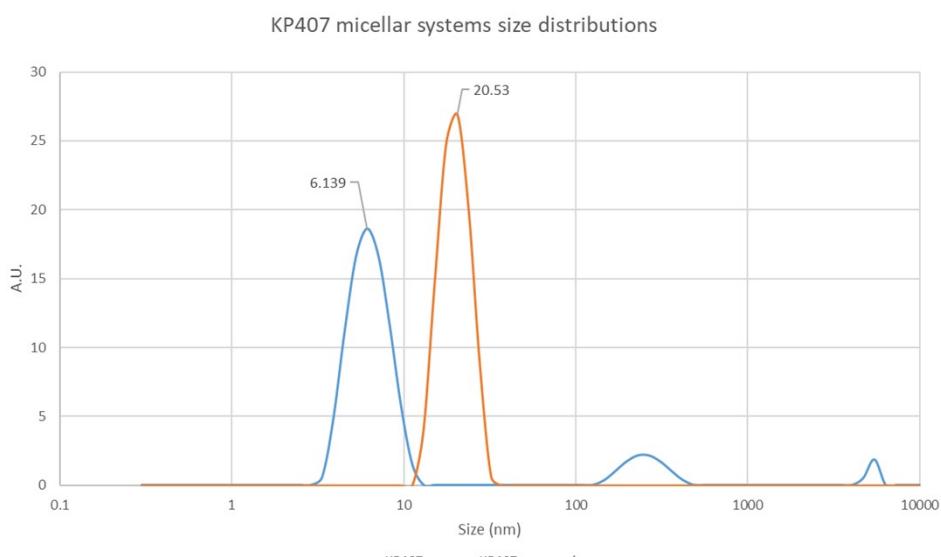

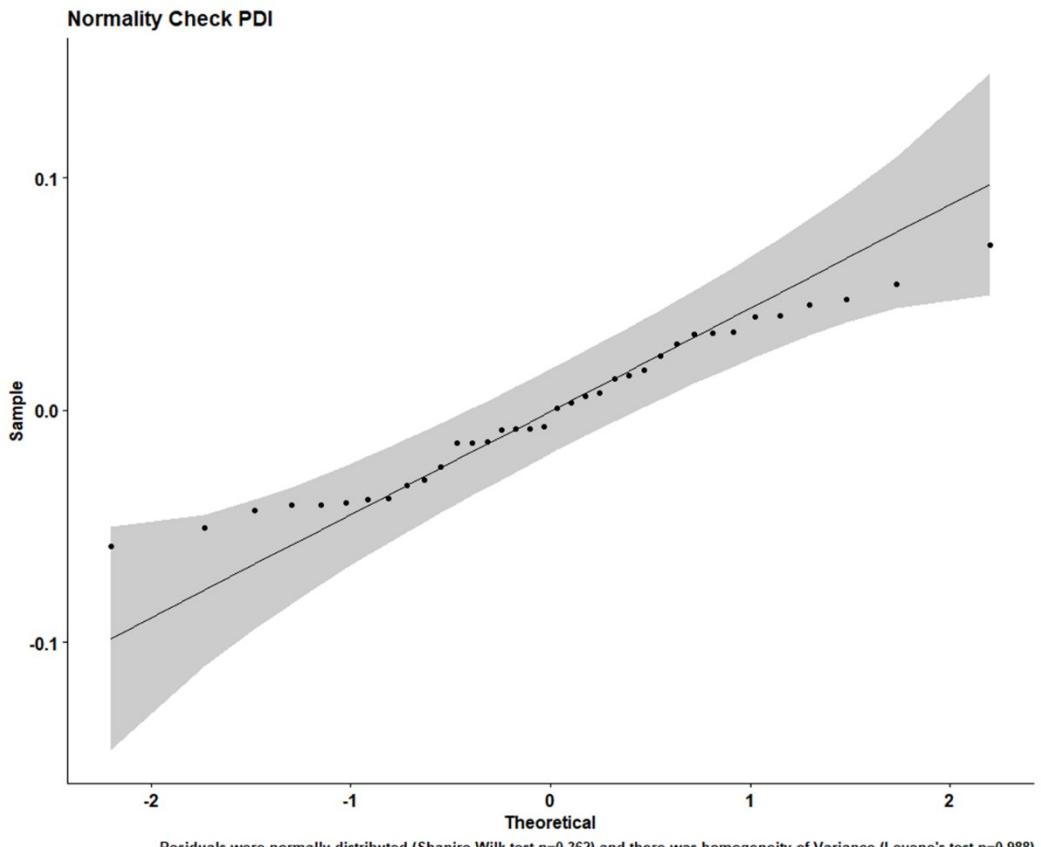

Figure S2 – Size distribution of a micellar dispersion of KP407 4% in the absence (blue) and presence (orange) of quercetin. There is a substantial size difference between the two samples, which may be attributed to the presence of quercetin molecules in the micellar structure.

Table S1 – Data frame of samples manufactured using increasing HPMC concentration (0.5%, 0.75%, 1%).

Residuals were normally distributed (Shapiro-Wilk test  $p=0.362$ ) and there was homogeneity of Variance (Levene's test  $p=0.988$ )

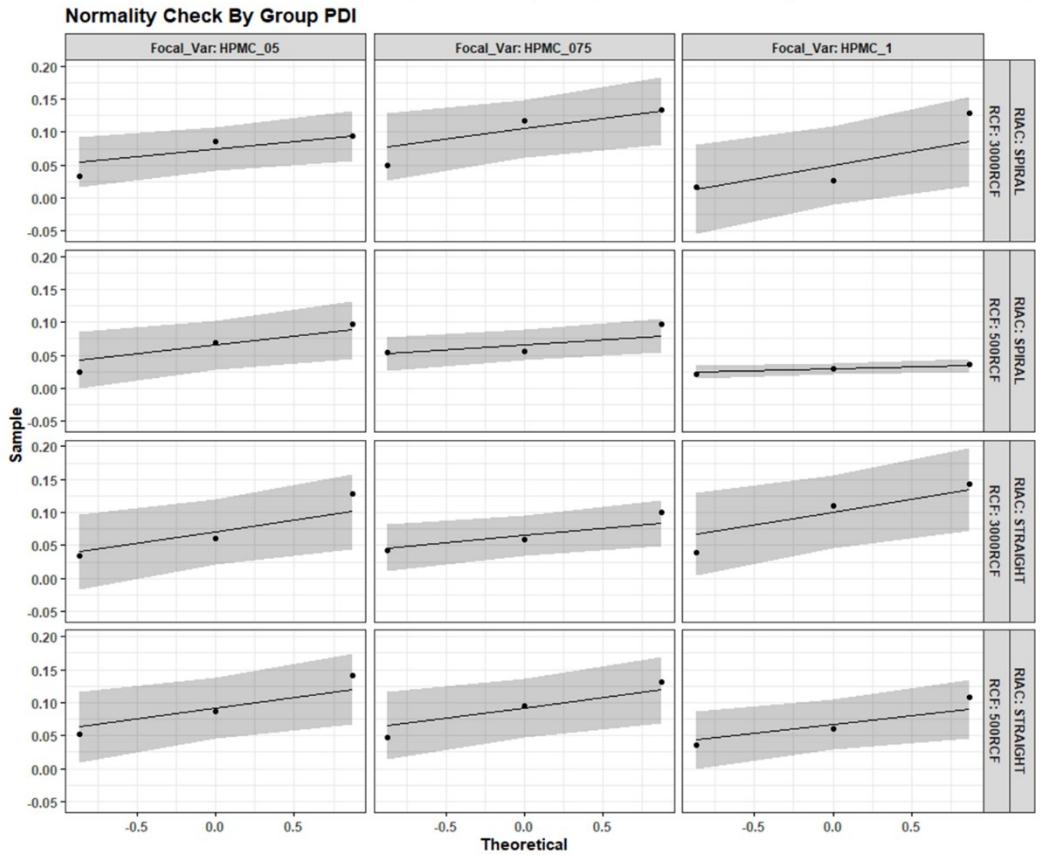

Figure S3 – Evaluation of ANOVA assumptions. The residuals of the linear model computed using the PDI data in Table S1 were normally distributed, and the Homogeneity of Variance assumption is also met. Shapiro-Wilk and Levene's tests were run to prove the validity of the assumptions.

Table S2 – Results of Three-Way ANOVA carried out to evaluate the effect of different independent variables on the PDI.
