10 The degradation efficiency is calculated as follows:

$$\text{Degradation efficiency} = \frac{C_0 - C}{C_0} \times 100\% \quad (\text{Eq. S1})$$

12 Where  $C_0$  and  $C$  are the initial concentration (at time 0) and the momentary concentrations (at time  $t$ ), respectively.  
13 In the experiment, the V-q Lissajous graph method (V-q trajectory method) was used to measure the electrical  
14 parameters such as discharge power. The formula for calculating the current flowing through the loop and the  
15 discharge power during discharge is as follows:

16 Power  $E$  for a single cycle

$$E = \int_0^T U(t)I(t)dt = \int_0^T U(t) \frac{dQ(t)}{dt} dt = \int_0^T U(t)dQ(t) \quad (\text{Eq. S2})$$

18 Where  $U$  is the voltage across the additional capacitor,  $I$  is the current across the additional capacitor.  
19 Further calculation to obtain the power  $P$  of the reactor:

$$P = f \times E \quad (\text{Eq. S3})$$

21 Where  $f$  is the frequency of the pulse power, and  $E$  is the single cycle power.

22 The energy efficiency ( $G$ ) calculation is defined as follows:

$$G = \frac{m}{P \times t} \quad (\text{Eq. S4})$$

24 Where  $P$  is the power of the reactor, and  $t$  is time of treatment.

25 Table S1 Distribution of elements on MnFe<sub>2</sub>O<sub>4</sub>

Element	Weight percentage	Atomic percentage
Mn	26.50	17.22
Fe	51.02	32.62
O	22.48	50.16

All	100	100
-----	-----	-----

26

27 Table S2 The kinetics parameters and G at spinel oxide

Group	k (min <sup>-1</sup> )	R <sup>2</sup>	G (mg/kJ)
Without catalyst	0.01436	0.9825	0.8410
CuFe <sub>2</sub> O <sub>4</sub>	0.02124	0.9849	1.0200
MnFe <sub>2</sub> O <sub>4</sub>	0.02677	0.9776	1.0306

28 Table S3 Effect of soil pH on pyrene degradation: Degradation efficiency of pyrene with different pH in 10 minutes.

pH	Degradation Efficiency (%)	Energy Efficiency (g/kWh)
2.7	61.0	0.57
7.3	77.0	0.72
11.7	78.4	0.73

35

36 Fig. S2 MnFe<sub>2</sub>O<sub>4</sub> catalyst. (a) MnFe<sub>2</sub>O<sub>4</sub> caught by a magnet, (b) MnFe<sub>2</sub>O<sub>4</sub> caught by a magnetic stirrer.

37 Fig. S2 proved that the MnFe<sub>2</sub>O<sub>4</sub> catalyst could be strongly attracted by a magnet, so it could be easily  
38 absorbed by the magnetic force.
