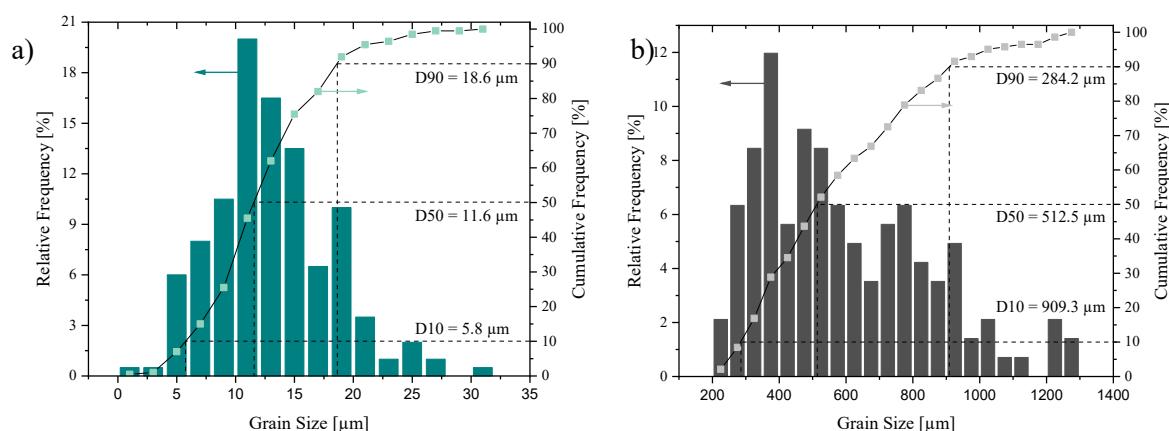

Fig. S1: Relative and cumulative grain size distribution with indicated D10, D50 and D90 percentile values of a) LLZO:Ta and b) LLZO:Al.

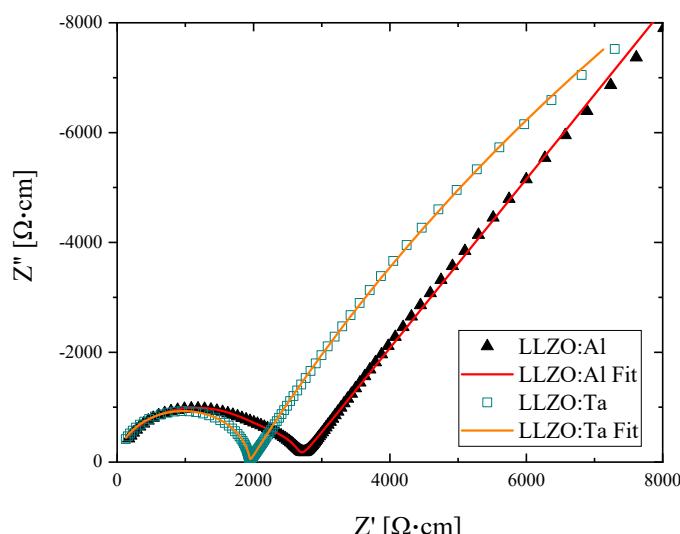

Fig. S2: Nyquist plot for LLZO:Ta and LLZO:Al. Data are normalized to the ratio of sample thickness to sample area.

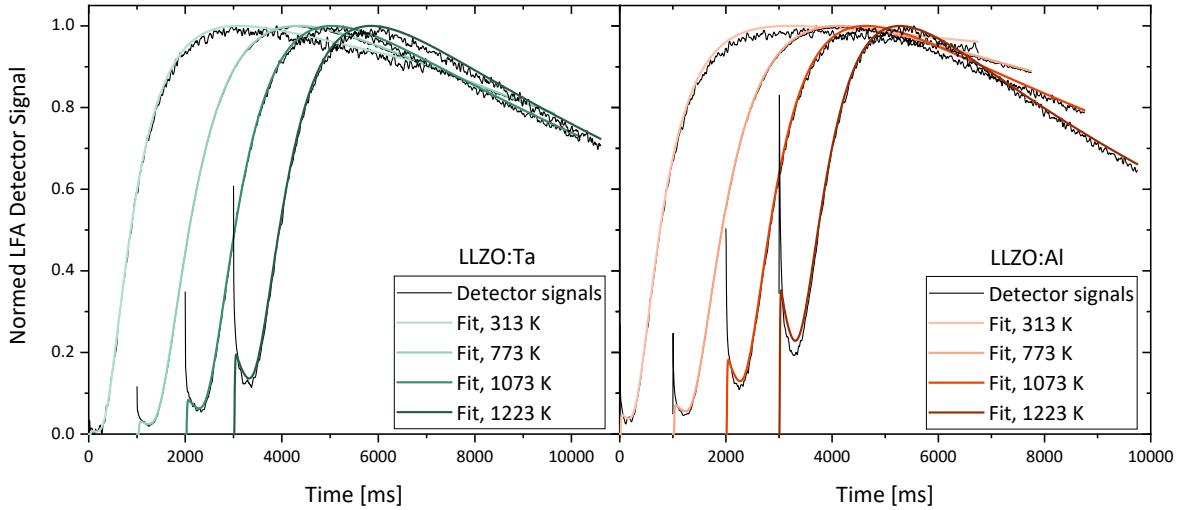

Fig. S3: Normed laser flash detector signals with corresponding fits (transparent (radiation) model³⁵) for LLZO:Ta (left) and LLZO:Al (right) at 313 K, 773 K, 1073 K, and 1223 K. The signals at 773 K, 1073 K, and 1223 K are each shown with a time offset of 1000 ms for better clarity.

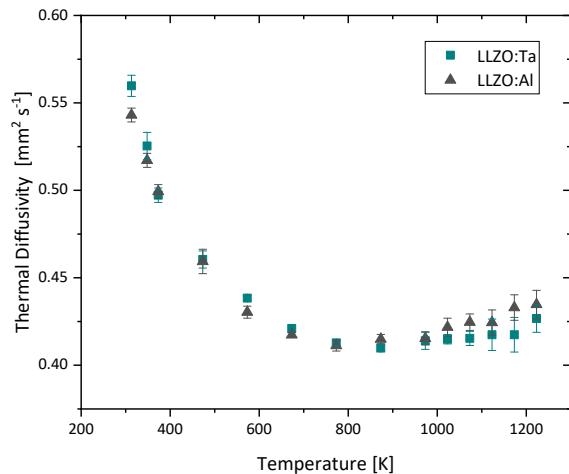

Fig. S4: Temperature-dependent thermal diffusivity of LLZO:Ta and LLZO:Al (both porosity corrected) determined by laser flash analysis under Ar/H₂ atmosphere. The shown data are the mean of five measurements with standard deviation shown as error bars.

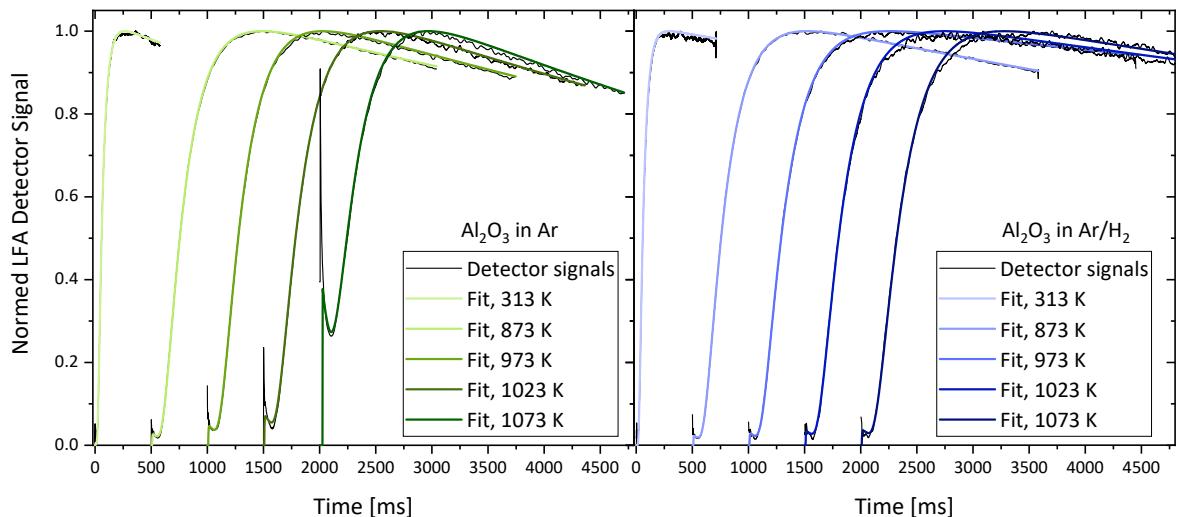

Fig. S5: Normed laser flash detector signals with corresponding fits (transparent (radiation) model³⁵) for an Al_2O_3 reference sample under Ar-atmosphere (left) and Ar/H_2 -atmosphere (right) at 313 K, 873 K, 973 K, 1023 K, and 1073 K. The signals at 873 K, 973 K, 1023 K, and 1073 K are each shown with a time offset of 500 ms for better clarity.

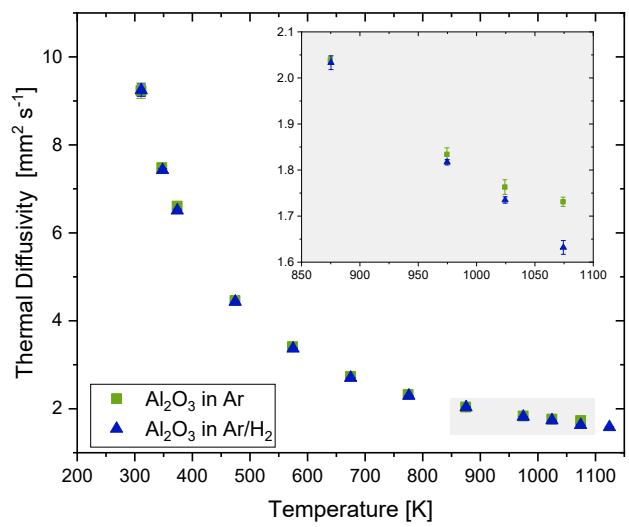

Fig. S6: Temperature-dependent thermal diffusivity of an Al_2O_3 reference sample determined by laser flash analysis under Ar and Ar/H_2 atmosphere. The shown data are the mean of three measurements with standard deviation shown as error bars. Inset: Closeup to the temperature range between 850 and 1100 K.
