### 1. Materials

### 2. Methods

- 3. Synthesis of Tb-UiO-66
- 4. Chemical stability Tb-UiO-66
- 5. Thermogravimetric analysis
- 6. SEM-EDS and XPS Characterization of Tb-UiO-66
- 7. Photoluminescence properties of Tb-UiO-66
- 8. Fluorescence sensing of styrene and EB

### 9. Sensing mechanisms

#### 1. Materials

*N,N'*-dimethylformamide (DMF), ethanol, styrene and ethylbenzene of the benzene compounds and the other chemicals all were purchased from J&K Scientific. All reagents and chemicals were analytical reagent and directly used without further purification. Deionized water was prepared from the Milli-Q ultrapure water system throughout all experiments. And the 70 % ethanol used in this experiment was further prepared by anhydrous ethanol by adding deionized water.

#### 2. Methods

All chemicals were purchased and directly used. The inductively coupled plasma optical emission spectrometer (ICP-OES) were measured by Agilent 5110. The powder X-ray diffraction (PXRD) patterns were obtained by Bruker D8 Advance Conventional Angle X-ray diffractometer. Scanning electron microscope (SEM) were measured by TESCAN MIRA LMS. Fourier transform infrared spectroscopy (FTIR) were obtained from Bruker TENSOR II instrument. X-ray photoelectron spectra (XPS) were recorded on a Thermo Scientific ESCALAB 250Xi instrument (Thermo Scientific, America) with a monochromatic Al K $\alpha$  X-ray source (1486.6 eV). Fluorescence lifetime was recorded on an Edinburgh FLS980 instrument by using a microsecond

lamp to scan at Ex=269 nm. Fluorescence sensing was recorded on a HITACHI F7100 spectrophotometer.

# 3. Synthesis of Tb-UiO-66

Scheme S1. Synthesis process of Tb-UiO-66.

Table S1. Mole and volume of reagent used to synthesize bimetallic materials Tb-UiO-66.

|                   | Metal source |                            | Ligand | Total solvent | Tb/Zr       |            |
|-------------------|--------------|----------------------------|--------|---------------|-------------|------------|
| Sample            | $ZrCl_4$     | $Tb(NO_3)_3 \bullet 6H_2O$ | BDC    | DME (I.)      | Theoretical | Real ratio |
|                   | (mmol)       | (mmol)                     | (mmol) | DMF (mL)      | ratio       | (ICP-OES)  |
| Tb-UiO-66 (1:103) | 0.061        | 1.159                      | 1.22   | 50            | 1:19        | 1:103      |
| Tb-UiO-66 (1:65)  | 0.122        | 1.098                      | 1.22   | 50            | 1:9         | 1:65       |
| Tb-UiO-66 (1:17)  | 0.305        | 0.915                      | 1.22   | 50            | 1:3         | 1:17       |
| Tb-UiO-66 (1:1.5) | 0.610        | 0.610                      | 1.22   | 50            | 1:1         | 1:1.5      |

## 4. Chemical stability Tb-UiO-66

Fig. S1 PXRD patterns of Tb-UiO-66 (1:103) (a) in boiling water; (a) in ambient water; (c) in pH=2 aqueous solution at room temperature; (d) in pH=12 aqueous solution at room temperature.

| Complex           | 2 Theta (°) |      |      |  |
|-------------------|-------------|------|------|--|
| Samples           | 110         | 002  | 244  |  |
| Tb-UiO-66 (1:1.5) | 7.39        | 8.50 | 25.7 |  |
| Tb-UiO-66 (1:17)  | 7.43        | 8.52 | 25.7 |  |
| Tb-UiO-66 (1:65)  | 7.45        | 8.54 | 25.8 |  |
| Tb-UiO-66 (1:103) | 7.45        | 8.58 | 25.8 |  |
| UiO-66            | 7.48        | 8.60 | 25.8 |  |

Table S2. The diffraction peaks of UiO-66 and Tb-UiO-66.

# 5. Thermogravimetric analysis

Fig. S2 Thermogravimetric analysis of UiO-66 before and after modification.

### 6. SEM-EDS and XPS Characterization of Tb-UiO-66

Fig. S3 SEM images of Tb-UiO-66(1:103).

Fig. S4 XPS spectra for C 1S in Tb-UiO-66 (1:17).

| Samples           | Zr 3d5/2  | Zr 3d3/2  |
|-------------------|-----------|-----------|
| UiO-66            | 185.20 eV | 182.80 eV |
| Tb-UiO-66 (1:103) | 184.95 eV | 182.60 eV |
| Tb-UiO-66 (1:17)  | 184.90 eV | 182.50 eV |

Table. S3 Comparison of binding energy of Zr 3d before and after modification of UiO-66.

#### 7. Photoluminescence properties of Tb-UiO-66

Fig. S5 Tb-UiO-66 (1:103) suspended in different hydroxyl solutions (a) Emission spectra (Ex=269 nm); (b) Trend graph of relative fluorescence intensity.

Fig. S6 (a~e) Trend diagram between styrene concentration and fluorescence intensity of UiO-66 and Tb-UiO-66 (1:103) at different emission wavelength; (f~h) Trend diagram between styrene concentration and relative fluorescence intensity of UiO-66 and Tb-UiO-66 (1:103).
