Figure S1. IR spectra of cytosine-d <sub>3</sub> simulated with the use of three different DFT methods	S3
Table S1. Frequencies and IR intensities of the strongest bands in the spectra of cytosine	S4
Table S2. Frequencies and IR intensities of the strongest bands in the spectra of cytosine-d <sub>3</sub>	S4
Figure S2. IR spectra of cytosine-d <sub>3</sub> , explicitly solvated with D <sub>2</sub> O molecules, simulated with the use of B97-3c method	S5
Figure S3. IR spectra of cytosine and cytosine-d <sub>3</sub> , explicitly solvated with H <sub>2</sub> O and D <sub>2</sub> O molecules, respectively, simulated with the use of PBE/def2-TZVP method	S6
Figure S2a. IR spectra of cytosine-d <sub>3</sub> , explicitly solvated with heavy water molecules ( $m_H = m_O = 400$ aem, see main text), simulated with the use of B97-3c method.	S7
Figure S3a. IR spectra of cytosine and cytosine-d <sub>3</sub> , explicitly solvated with heavy water molecules ( $m_H = m_D = m_O = 400$ aem, see main text), simulated with the use of PBE/def2-TZVP method.	S8
Figure S4. IR spectra of cytosine, explicitly solvated with heavy water molecules ( $m_H = m_O = 400$ aem, see main text), simulated with the use of B97-3c method.	S9
Figure S5. B3LYP/def2-TZVP calculated IR spectra of various clusters cytosine:30H <sub>2</sub> O	S10
Figure S6. B3LYP/def2-TZVP calculated IR spectra of various clusters cytosine-d <sub>3</sub> :30D <sub>2</sub> O	S11
Figure S7. Raman spectra of cytosine-d <sub>3</sub> , explicitly solvated with heavy water molecules ( $m_D = m_O = 400$ aem, see main text), simulated with the use of PBE/def2-TZVP method	S12
Figure S8. Raman spectra of cytosine-d <sub>3</sub> , explicitly solvated with heavy water molecules ( $m_D = m_O = 400$ aem, see main text), simulated with the use of B3LYP/def2-TZVP method	S13
Figure S9. Raman spectra of cytosine, explicitly solvated with heavy water molecules ( $m_D = m_O = 400$ aem, see main text), simulated with the use of B3LYP/def2-TZVP method	S14

Table S3. Non-scaled frequencies and relative Raman intensities of the strongest bands in the spectra of cytosine-d <sub>3</sub> computed for various clusters cytosine-d <sub>3</sub> -6D <sub>2</sub> O	S15
Figure S10. B3LYP/def2-TZVP calculated Raman spectra of various clusters cytosine:30H <sub>2</sub> O	S16
Figure S11. B3LYP/def2-TZVP calculated Raman spectra of various clusters cytosine-d <sub>3</sub> :30D <sub>2</sub> O	S18
Figure S12. Raman spectra of cytosine, explicitly solvated with 30 water molecules, simulated with the use of B3LYP-D3/def2-TZVP and B3LYP-D3/aug-cc-pVDZ	S20
Figure S13. IR spectra simulated for clusters cytosine-d <sub>3</sub> :4D <sub>2</sub> O and cytosine-d <sub>3</sub> :30D <sub>2</sub> O	S21

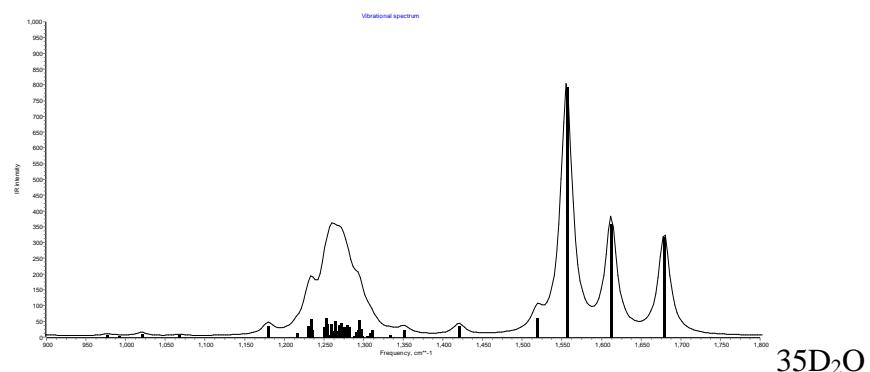

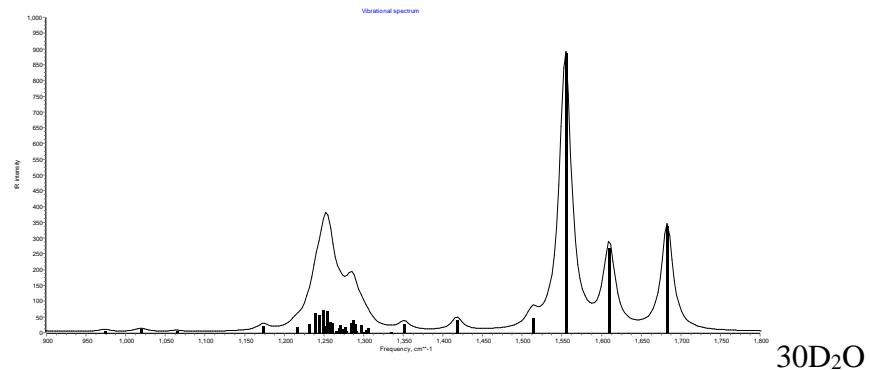

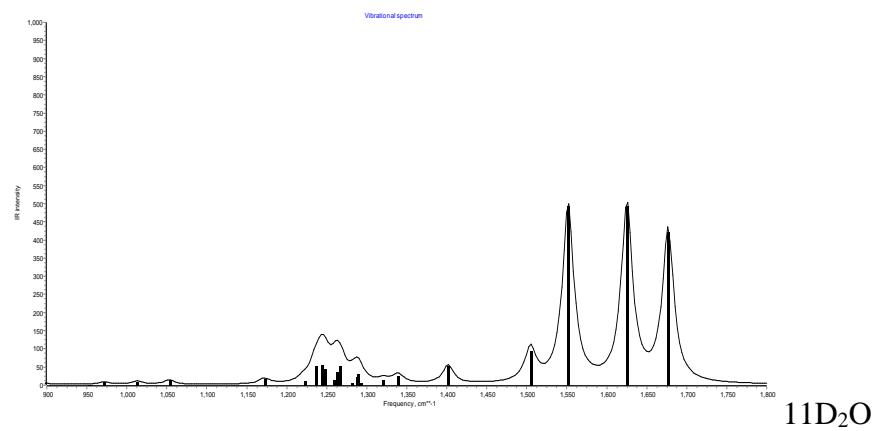

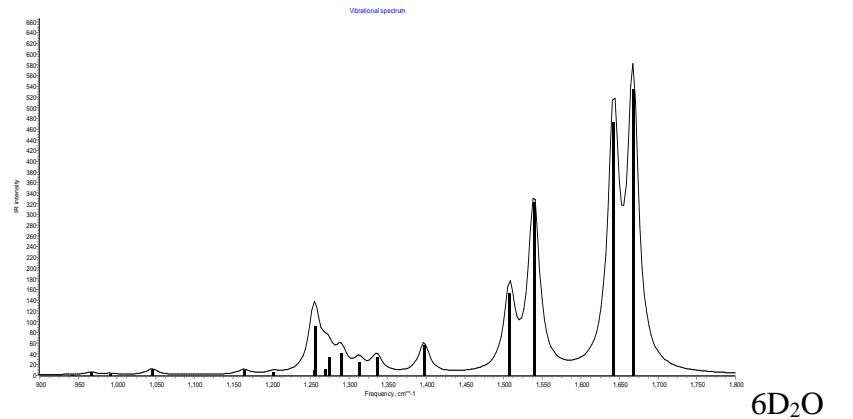

**Figure S1.** IR spectra of cytosine-d<sub>3</sub> simulated with the use of three different DFT methods.

**Table S1.** Frequencies ( $\nu/\text{cm}^{-1}$ ) and relative IR intensities ( $I_{\text{rel}}$ ) of the strongest bands in the spectra of cytosine (spectral region 1100-1800  $\text{cm}^{-1}$ ).

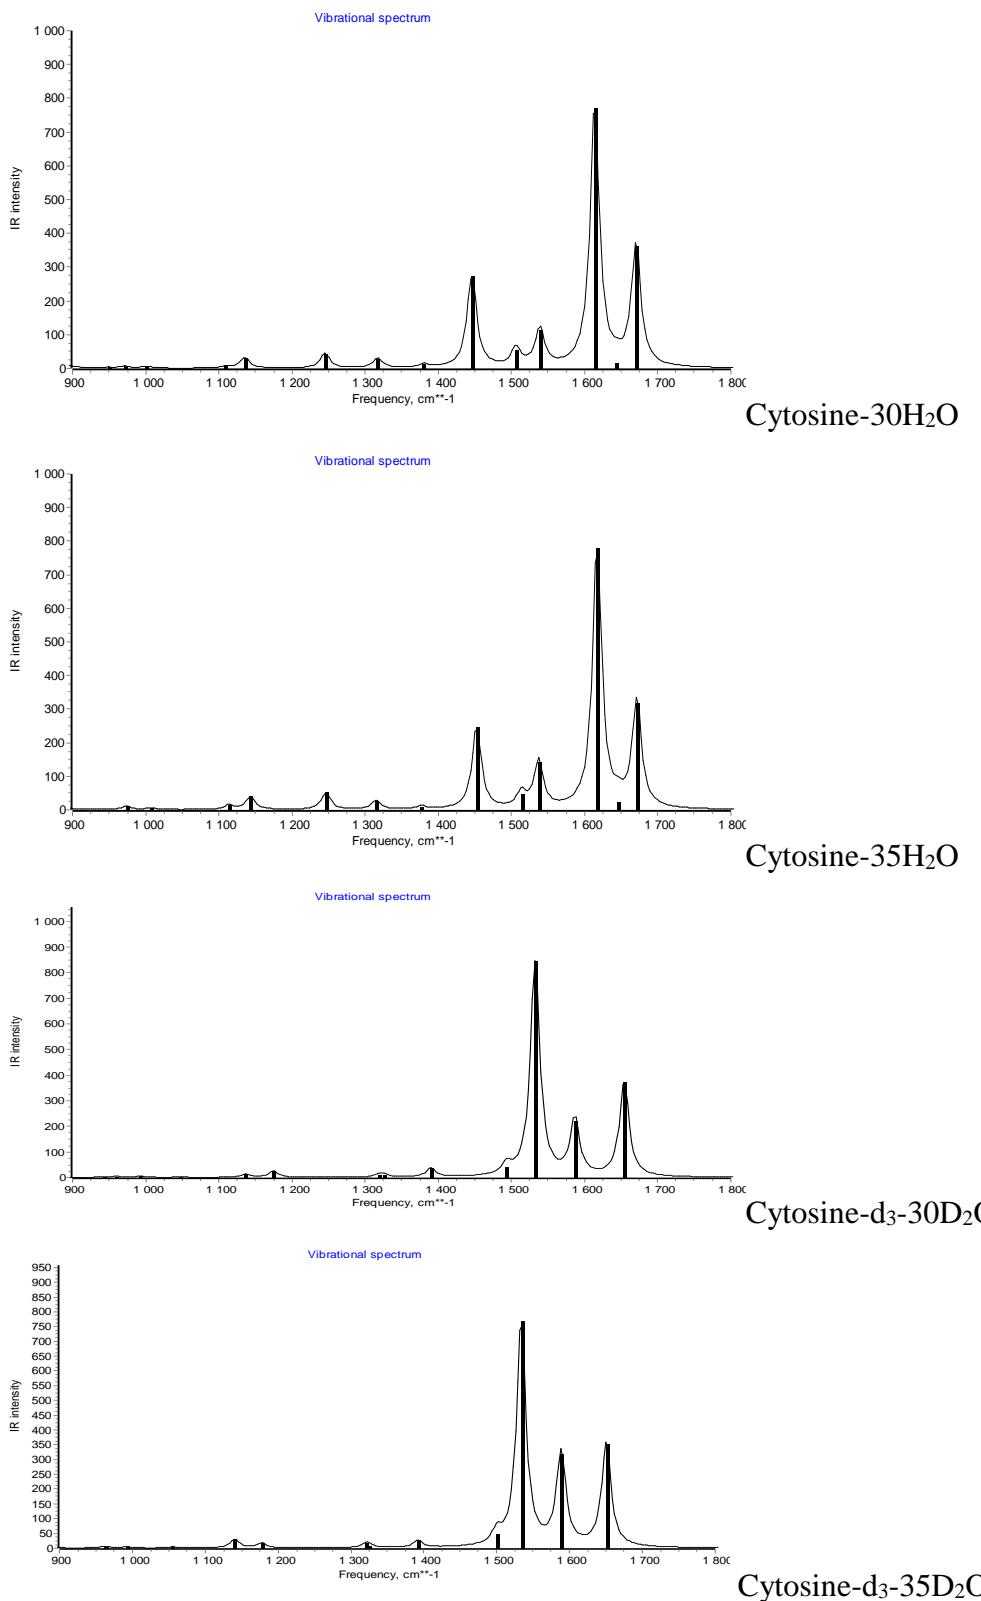

**Figure S2.** IR spectra of cytosine-d<sub>3</sub>, explicitly solvated with D<sub>2</sub>O molecules, simulated with the use of B97-3c method.

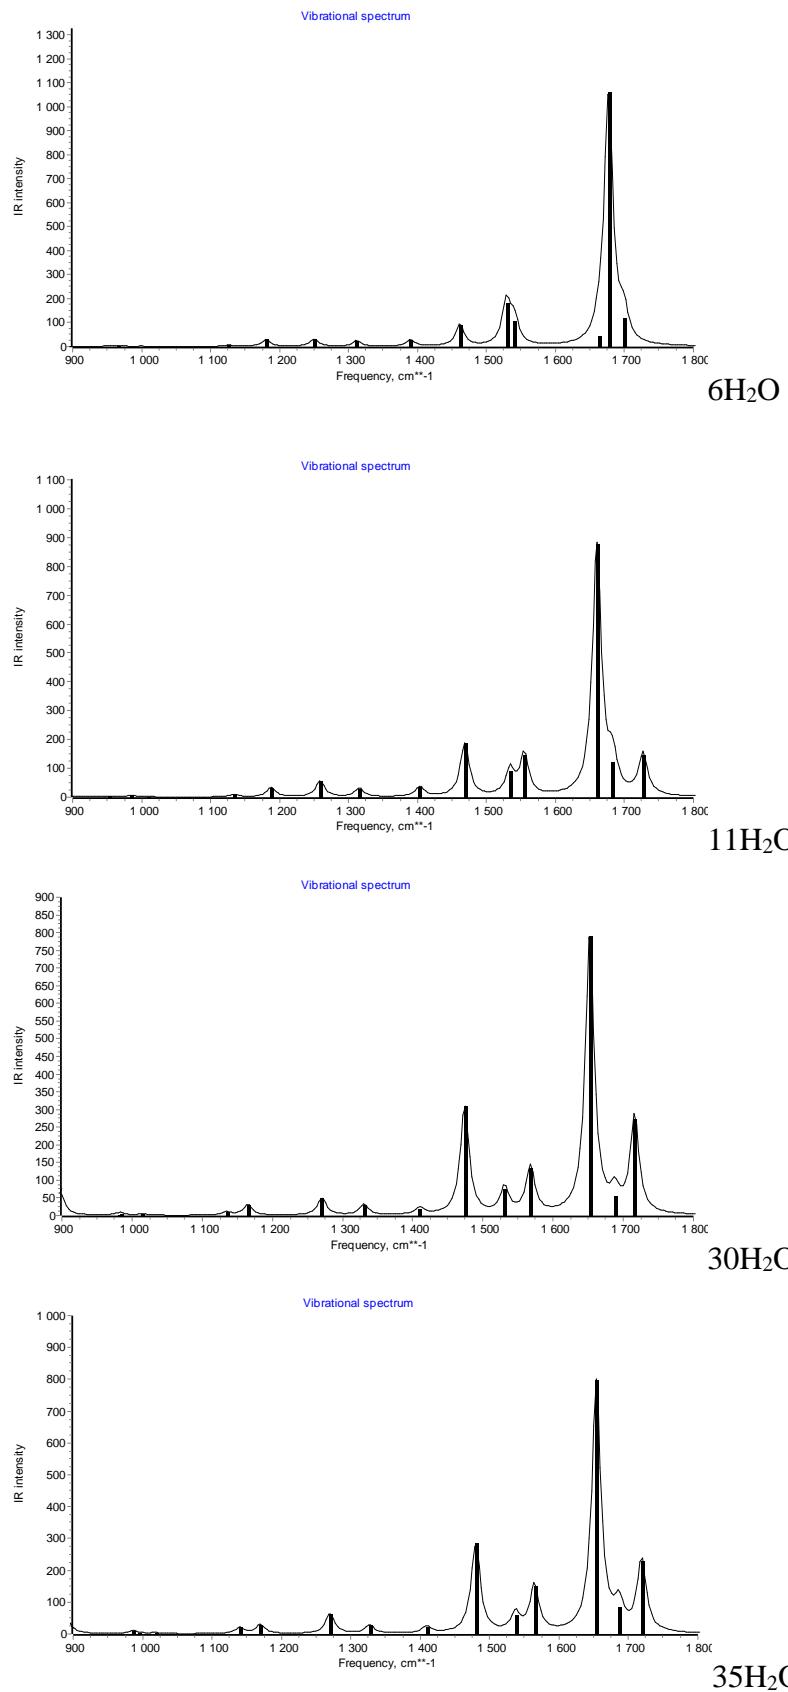

**Figure S3.** IR spectra of cytosine and cytosine- $d_3$ , explicitly solvated with  $\text{H}_2\text{O}$  and  $\text{D}_2\text{O}$  molecules, respectively, simulated with the use of PBE/def2-TZVP method.

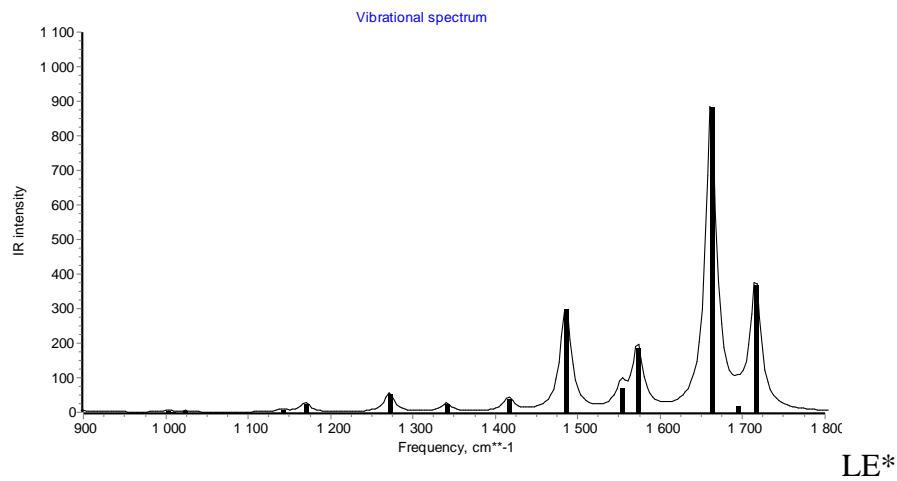

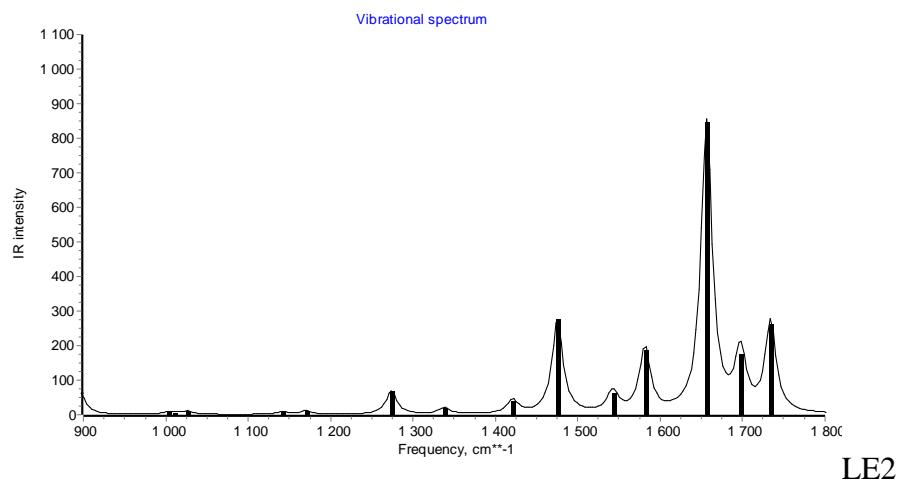

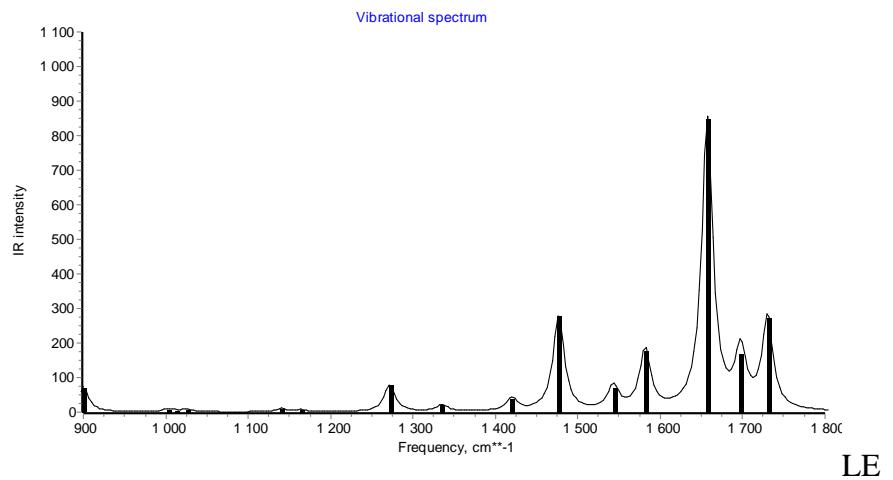

**Figure S2a.** IR spectra of cytosine-d<sub>3</sub>, explicitly solvated with heavy water molecules ( $m_{\text{H}} = m_{\text{O}} = 400$  aem, see main text), simulated with the use of B97-3c method. Comparison with Fig. S2 shows that the bands of cytosine that do not overlap with the bands of D<sub>2</sub>O (spectral region  $\sim 1300\text{-}1800\text{ cm}^{-1}$ ) do not change when D<sub>2</sub>O molecules are replaced by “heavy water”.

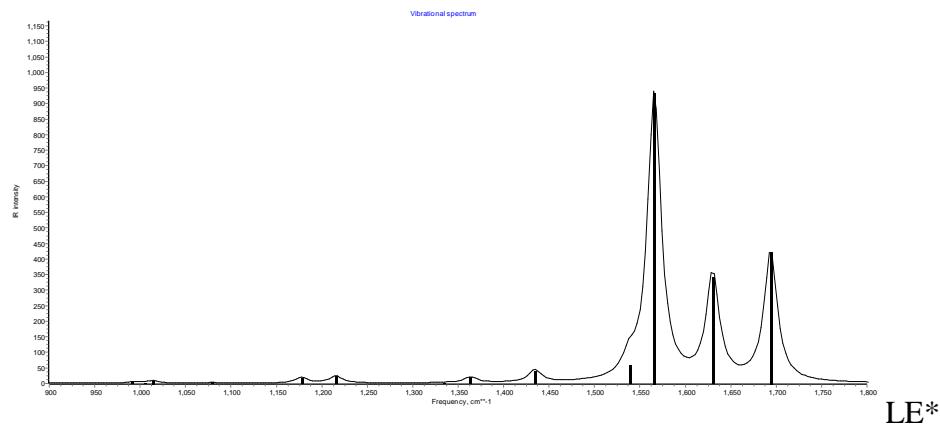

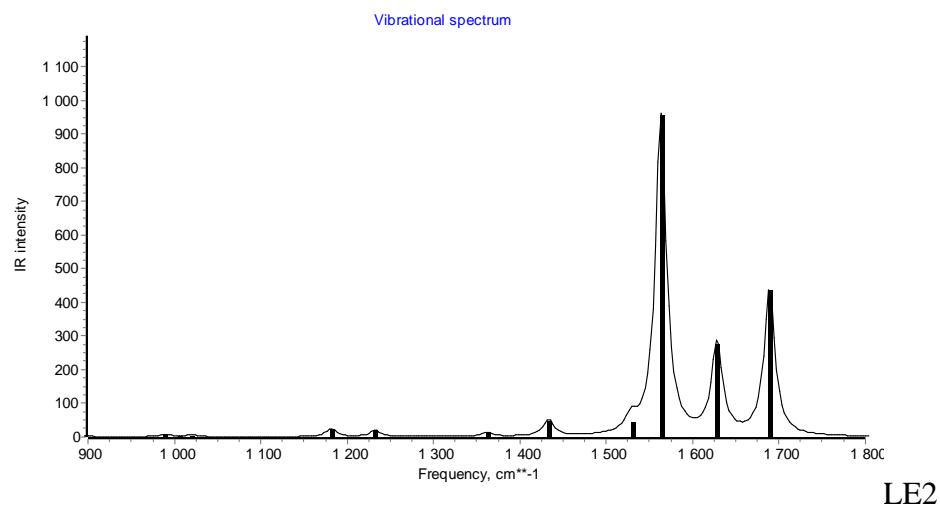

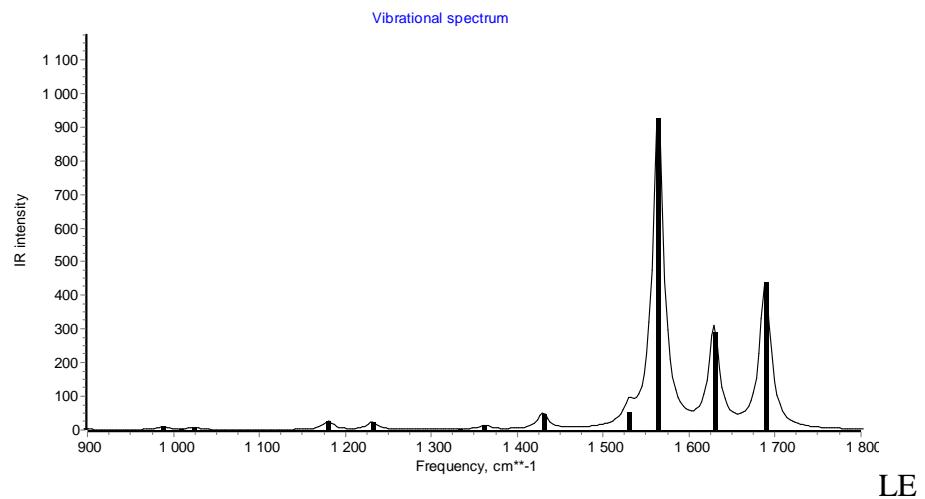

**Figure S3a.** IR spectra of cytosine and cytosine- $d_3$ , explicitly solvated with heavy water molecules ( $m_H = m_D = m_O = 400$  aem, see main text), simulated with the use of PBE/def2-TZVP method. Comparison with Fig. S3 shows that the bands of cytosine that do not overlap with the bands of  $\text{H}_2\text{O}$  (spectral region  $\sim 1100\text{-}1550 \text{ cm}^{-1}$ ) or  $\text{D}_2\text{O}$  (spectral region  $\sim 1300\text{-}1800 \text{ cm}^{-1}$ ) do not change when  $\text{H}_2\text{O}$  or  $\text{D}_2\text{O}$  are replaced by “heavy water”.

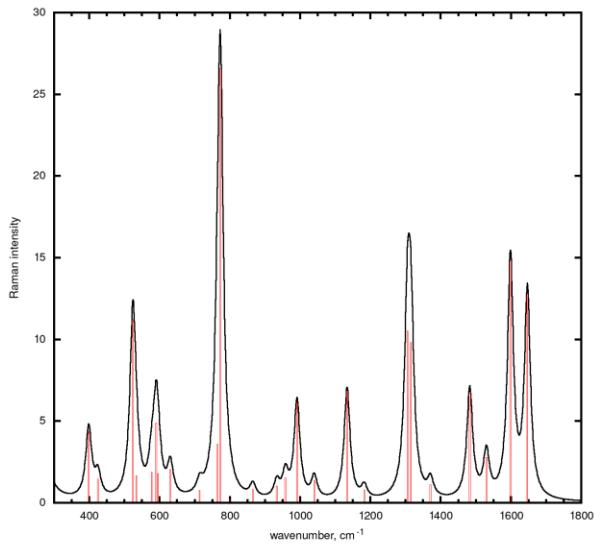

**Figure S4.** IR spectra of cytosine, explicitly solvated with heavy water molecules ( $m_H = m_O = 400$  aem, see main text), simulated with the use of B97-3c method.

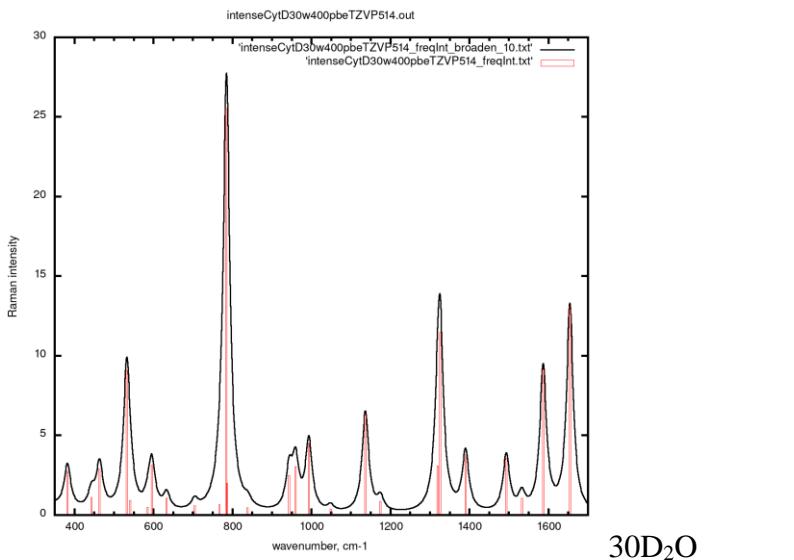

**Figure S5.** IR spectra of cytosine, explicitly solvated with 30 heavy water molecules ( $m_H = m_O = 400$  aem, see main text), simulated with the use of B3LYP-D3/def2-TZVP method for the lowest-energy (LE) and the second lowest energy (LE2) clusters from the generated ensemble of four clusters. The energy difference between LE and LE2 clusters = 2.4 cal/mol, and the corresponding Boltzmann weights of the clusters = 0.438 and 0.436, respectively. LE\* is the spectrum of the lowest-energy cluster generated in the different QCG run (see main text).

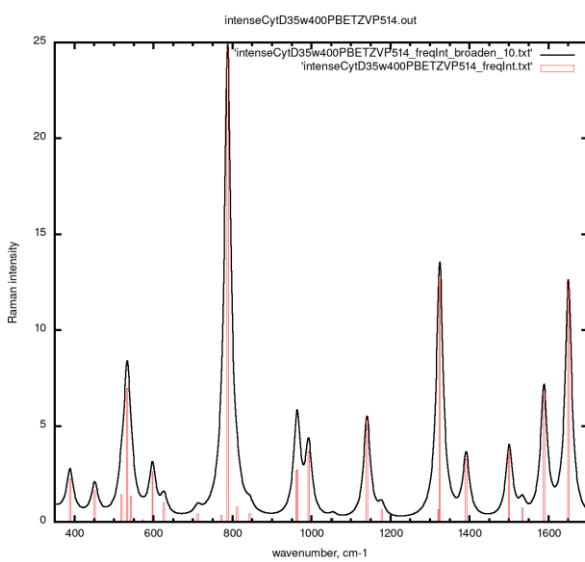

**Figure S6.** IR spectra of cytosine-d<sub>3</sub>, explicitly solvated with 30 heavy water molecules ( $m_D = m_O = 400$  aem, see main text), simulated with the use of B3LYP-D3/def2-TZVP method for the lowest-energy (LE) and the second lowest energy (LE2) clusters from the generated ensemble of four clusters. The energy difference between LE and LE2 clusters = 2.4 cal/mol, and the corresponding Boltzmann weights of the clusters = 0.438 and 0.436, respectively. LE\* is the spectrum of the lowest-energy cluster generated in the different QCG run (see main text).
