Proof of concept from experimental analysis

From the data presented in the table below, it is evident that the incorporation of a double donor and a thiophene spacer significantly increases the efficiency of the dye. The efficiency of the dye TT with the double donor is almost double (5.12%) that of the dye T with a single donor (2.79%). WR5 with the thiophene spacer shows a higher efficiency of 4.70%.

In our manuscript, we have tried to search for the best donor moieties for such thiophene spacer-based dye sensitizers. So, this definitely have a vision of increasing the efficiency of the dye sensitizers through such design. Thus, our research aims to identify the best donor moieties for such dual donor based dye sensitizers, using carboxylic acid as a reference acceptor. Through molecular modelling, we are looking to design better and more efficient dual donor-based dyes grounded on the experimental results.

Serial number	Structure and Reference	Experimental Efficiency η (%)
