VIBRATIONAL SPECTRUM OF 1-CNN⁺

Supplementary Table 1: Theoretical vibrational spectrum for 1-CNN⁺ calculated with B3LYP/6-311+G(d,p). These harmonic vibrational frequencies are not scaled.

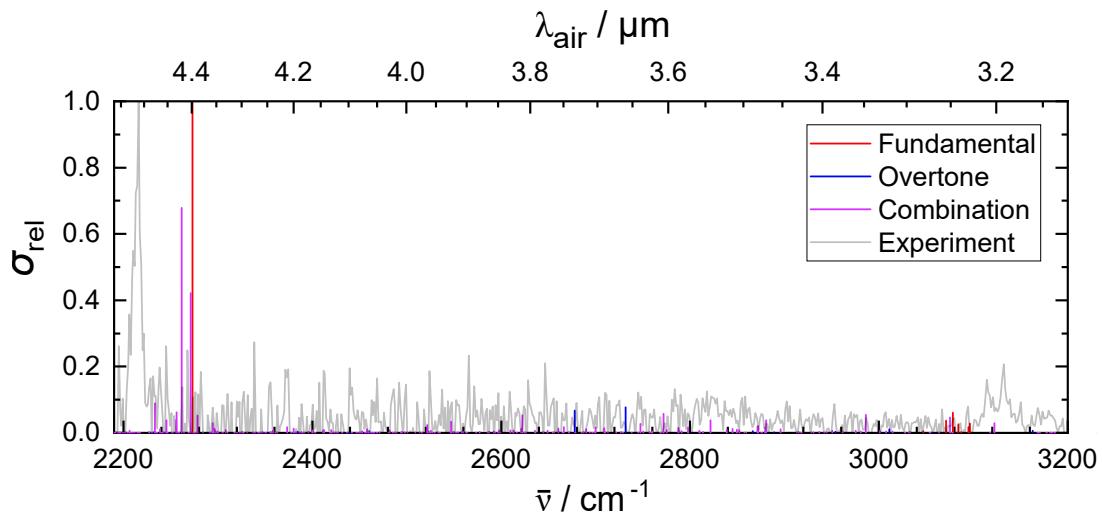

Frequency cm ⁻¹	IR Intensity km mol ⁻¹

ANHARMONIC CALCULATIONSupplementary Figure 1. Anharmonic vibrational spectrum of 1-CNN⁺ calculated with B3LYP/6-311+G(d,p) overlaid with the experimental spectrum. The anharmonic intensities are normalised to the CN fundamental.

COMPARISON OF 1-CNN AND 1-CNN⁺

Supplementary Figure 2. Theoretical vibrational spectra of a) 1-CNN⁺ and b) 1-CNN. The spectra were calculated at the DFT level with B3LYP/6-311+G(d,p). The vibrational frequencies are scaled by 0.9679.

EXPERIMENT AND THEORY FOR $1\text{-CNN}^+ - \text{HE}$ 

Supplementary Figure 3. (a) Photofragmentation spectrum of $1\text{-CNN}^+ - \text{He}$. Harmonic frequency calculations using B3LYP/6-311+G(d,p) on $1\text{-CNN}^+ - \text{He}_n$ with $n = 0$ (b) and $n = 1$ (c). The vibrational temperature was set to 4 K. The vibrational frequencies were convoluted with a Lorentzian function with a FWHM of 4 cm^{-1} . All calculations used the 0.9679 scaling factor. The stick spectra have units of km mol^{-1} .
