Figure S3. <sup>13</sup>C NMR spectrum of dppfCuBH<sub>4</sub> (CDCl<sub>3</sub>).

Figure S4. Digital photographs of single crystals of 1 (a) and 2 (b) clusters.

**Figure S5.** The comparison of mass spectra of cluster **1** prepared from NaBH<sub>4</sub> and NaBD<sub>4</sub>. The same peak position reveals that no hydride atoms are present in **1**.

Figure S6. The thermal ellipsoids of the ORTEP diagram of 1.

Figure S7. The I/sigma vs. resolution plot of 2. Note: during single crystal X-ray diffraction of 2 (CCDC 2250407), serious radiation damage was observed for the crystal when being exposed for a long time. This thus makes it rather difficult to satisfy the data requirement of I/sigma>3 for all conditions, namely, 2theta  $\leq 130^{\circ}$  (Resolution $\geq 0.84$  Å). To satisfy the requirement of completeness and enhance the quality of the diffraction images, we thus attempt to limit the exposure dose. Although I/sigma is less than 3 for the scope of 2theta>55°, the resultant structure does not influence the discussion and conclusion of this work.

Figure S8. The  $R_{merge}$  vs. resolution plot of 2.

Figure S9. The thermal ellipsoids of the ORTEP diagram of 2.

**Figure S10.** The packing structure of **1** in the unit cell. Color codes for atoms: green spheres, Ag; red spheres, Cu; yellow spheres, Fe; pink spheres, P; turquoise spheres, Cl; pale blue spheres, F; grey spheres, C; lavender spheres, Sb. All hydrogen atoms are omitted for clarity.
