**Figure S3. Association of AMED, DASH diet score and the risk of CVD stratified by potential risk factors.** BMI = body mass index; MET = metabolic equivalent of task; AMED = Alternate Mediterranean Diet; DASH = the Dietary Approaches to Stop Hypertension. Forest plots show the multivariable HRs of CVD associated with AMED and DASH diet scores in subgroups. HRs were adjusted for age, sex, race, centers, BMI, household income, Townsend deprivation index, smoking, alcohol consumption, physical activity, history of hypertension, history of high cholesterol, family history of cardiovascular disease, family history of diabetes, vitamin supplement use, mineral supplement use, aspirin use, and diabetes duration. Horizontal lines represent 95% CIs. \*P for interaction<0.05.
