

## Appendix: Supplementary figures and tables

### Content

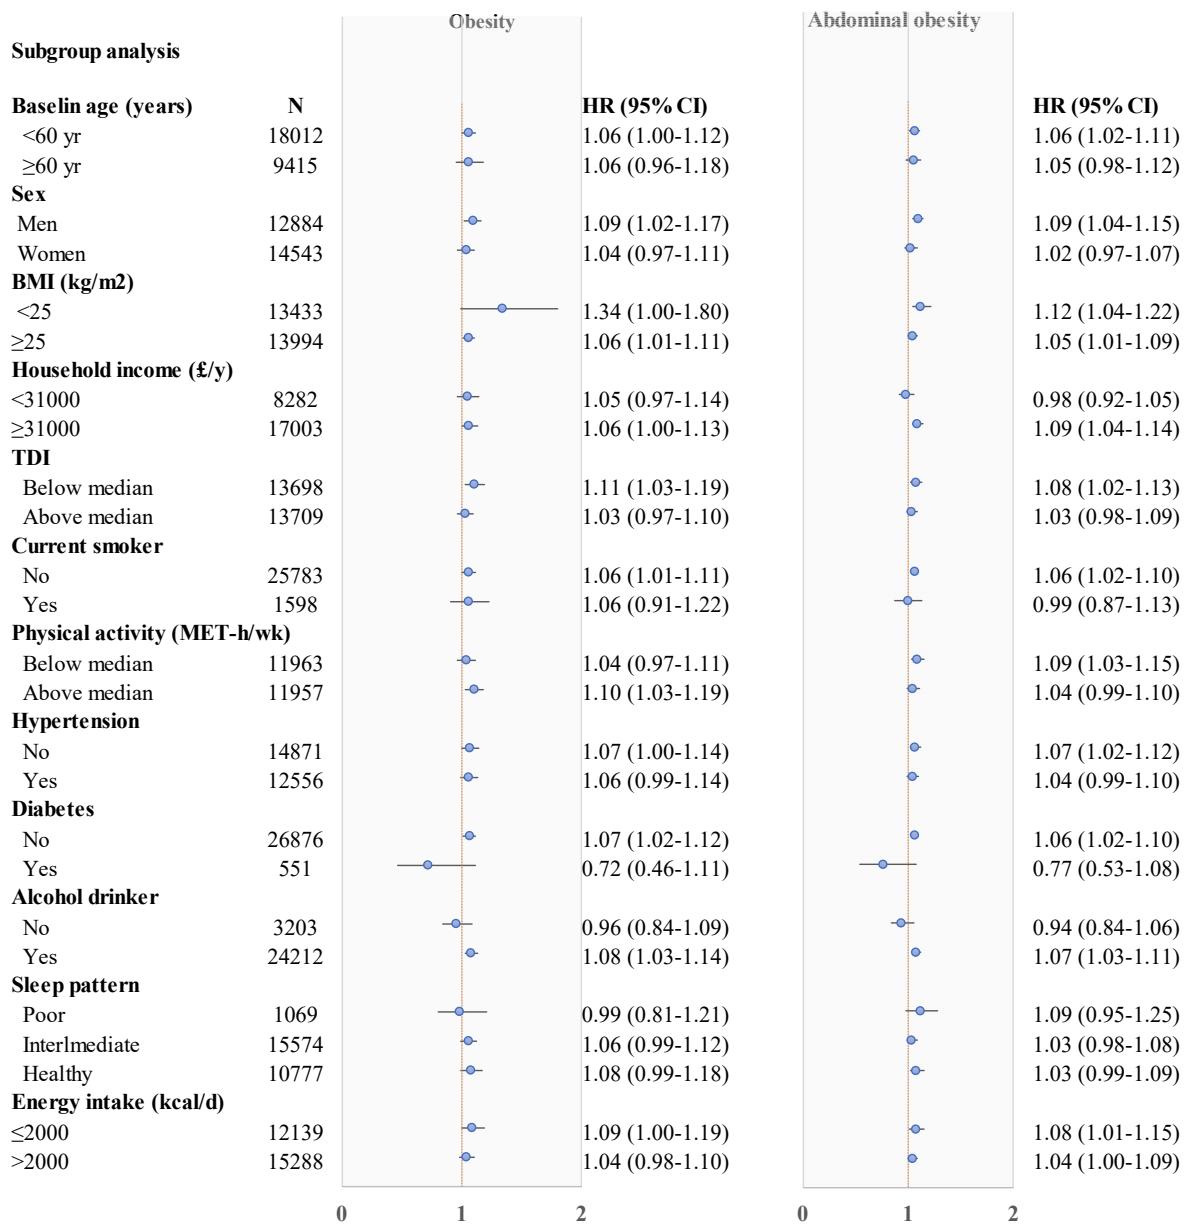

Figure S1. Flow of participants in current UK biobank study .....	2
Figure S2. Distribution of the genetic risk score in UK biobank .....	3
Figure S3. Association of fried food consumption and the risk of adiposity stratified by potential risk factors. ....	4
Figure S4. Association of fried potato consumption and the risk of adiposity stratified by potential risk factors.....	5
Figure S5. Association of fried white meat consumption and the risk of adiposity stratified by potential risk factors. ....	6
Table S1. Characteristics of 940 obesity-associated SNPs in the UK Biobank .....	7
Table S2. Diet component definitions used in the AMED score .....	29
Table S3. Basic characteristics of participants from UK Biobank according to fried potato consumption or fried white consumption.....	30
Table S4. Multivariable-adjusted HRs (95% CIs) for the associations of fried potato with obesity incidence.....	33
Table S5. Multivariable-adjusted HRs (95% CIs) for the associations of fried white meat with obesity incidence .....	35
Table S6. Multivariable Hazard Ratios (95% CIs) of fried food consumption and obesity incidence from sensitivity analyses. ....	37
Table S7. Multivariable Hazard Ratios (95% CIs) of fried potato consumption and obesity incidence from sensitivity analyses. ....	40
Table S8. Multivariable Hazard Ratios (95% CIs) of fried white consumption and obesity incidence from sensitivity analyses. ....	43
Table S9. Lifestyle characteristics of participants from the UK Biobank according to obesity at baseline and the follow-up time. ....	46

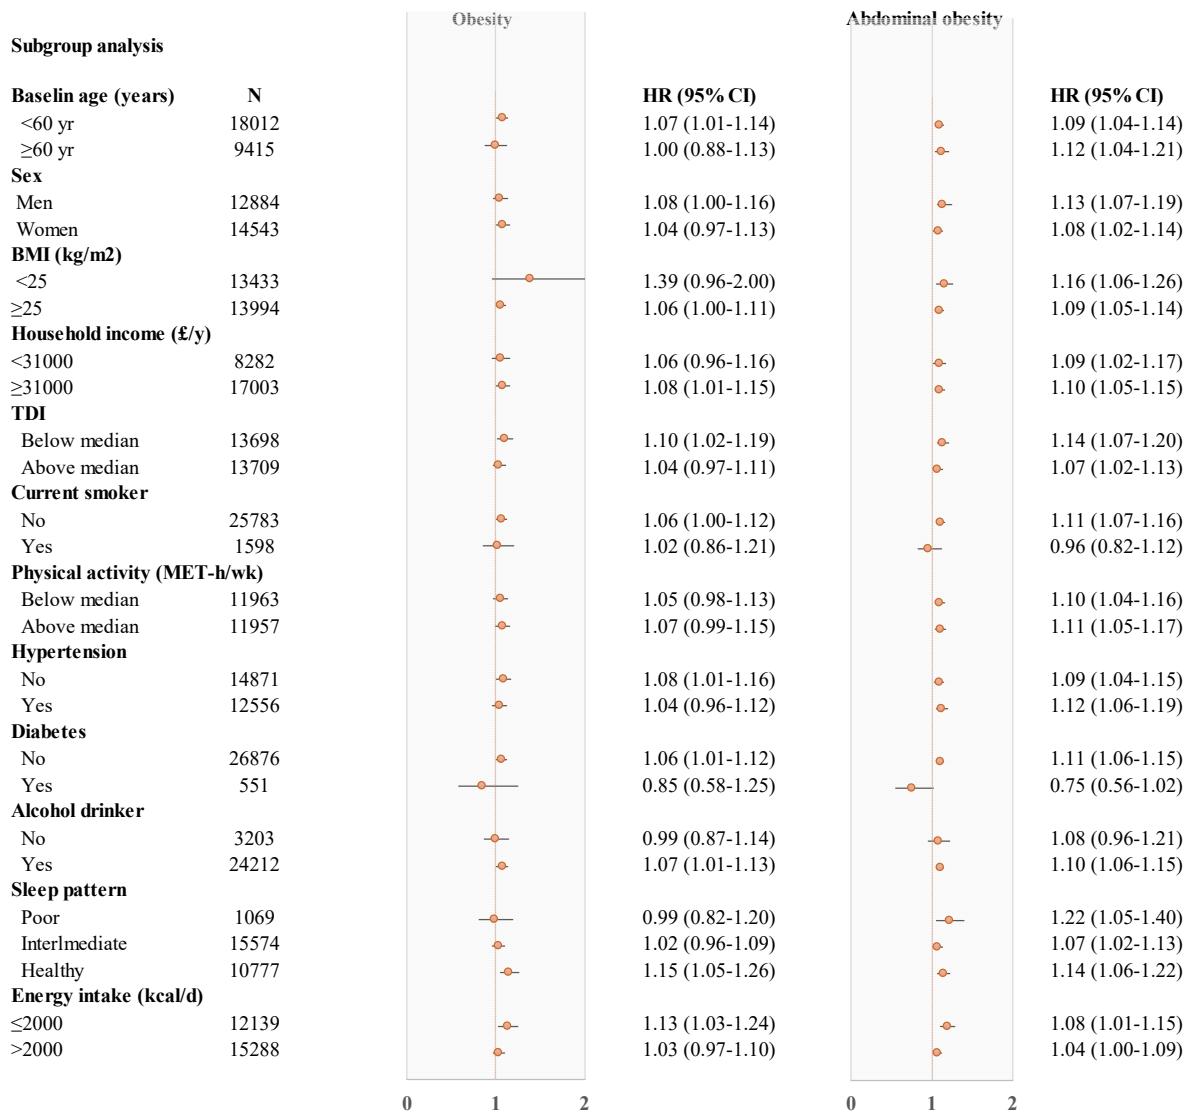

**Figure S1. Flow of participants in current UK biobank study**

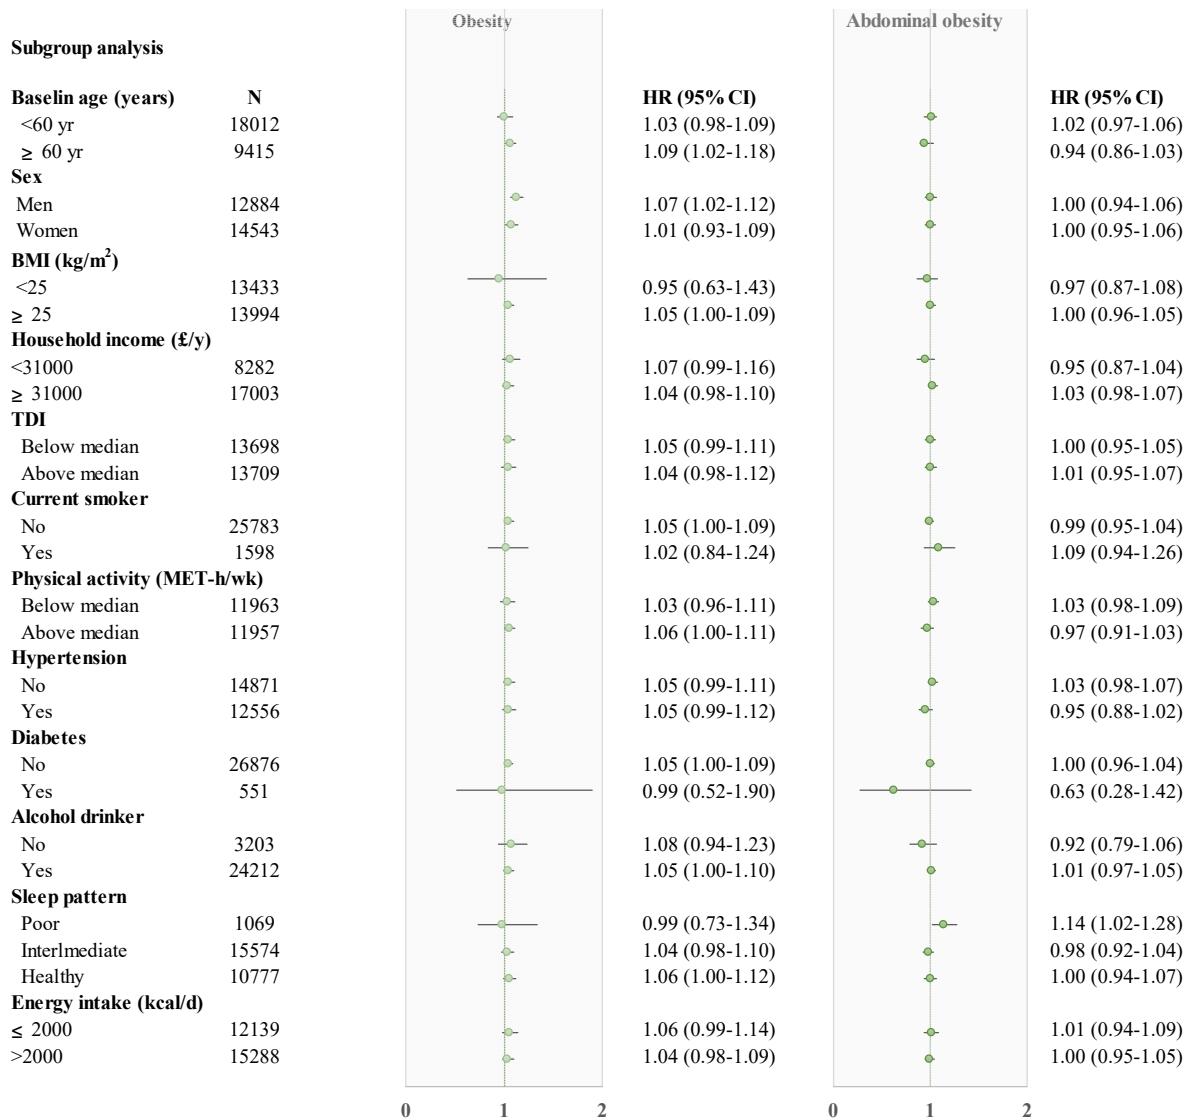

**Figure S2. Distribution of the genetic risk score in UK biobank**

**Figure S3. Association of fried food consumption and the risk of adiposity stratified by potential risk factors.** HRs for the fried food consumption associated with obesity and abdominal obesity were adjusted for age, sex, race, centers, education, Townsend deprivation index, household income, smoking, alcohol consumption, physical activity, sleep pattern, energy intake, and BMI (for obesity) or WC (for abdominal obesity) at baseline.

**Figure S4. Association of fried potato consumption and the risk of adiposity stratified by potential risk factors.** HRs for the fried potato consumption associated with obesity and abdominal obesity were adjusted for age, sex, race, centers, education, Townsend deprivation index, household income, smoking, alcohol consumption, physical activity, sleep pattern, energy intake, and BMI (for obesity) or WC (for abdominal obesity) at baseline.

**Figure S5. Association of fried white meat consumption and the risk of adiposity stratified by potential risk factors.** HRs for the fried white meat consumption associated with obesity and abdominal obesity were adjusted for age, sex, race, centers, education, Townsend deprivation index, household income, smoking, alcohol consumption, physical activity, sleep pattern, energy intake, and BMI (for obesity) or WC (for abdominal obesity) at baseline.

**Table S1. Characteristics of 940 obesity-associated SNPs in the UK Biobank**

Chr=chromosome.

Effect allele is the one associated with high risk of obesity; and other is the reference allele. Each SNP's relative effect size  $\beta$  was obtained from the ancestry-specific analysis of Europeans in the latest Genome-wide multi-ethnic meta-analysis.

**Table S2. Diet component definitions used in the AMED score**

<b>Components</b>	<b>Criteria for minimum score of 0</b>	<b>Criteria for maximum score of 1</b>	<b>Field IDs</b>
Fruit	Less than median intake	Greater than median intake	100190,100200 (Fruit juice) 1004410-104590 (Whole fruit and dried fruit)
Vegetable	Less than median intake	Greater than median intake	104060-104380 (All vegetables except potatoes and beans) 104000, 104010, 104110, 104120, 104280 (Beans)
Legumes	Less than median intake	Greater than median intake	103270 (Tofu) 104000, 104010, 104110, 104120, 104280 (Beans) 100770, 100830, 100840, 100850, 102720, 102740, 102780 (Cereal) 100810, 101260 (Oat)
Whole grains	Less than median intake	Greater than median intake	100950, 101020, 101090, 101160 (Bread) 20091-20094 (Type of bread)
Nuts	Less than median intake	Greater than median intake	102410-102450 (Peanut, nuts, seeds)
Fish	Less than median intake	Greater than median intake	103150-103230 (Fish and seafood)
Red and processed meats	Greater than median intake	Less than median intake	103010 (Sausage), 103070 (Bacon), 103080 (Ham)
Ratio of monounsaturated to saturated fat	Less than median intake	Greater than median intake	100004 (Fat), 100007 (Polyunsaturated fat), 100006 (Saturated fat)
Ethanol	<5 or >25 g	5–25 g/d	100022 (Alcohol)
Total score	0	9	□

Cox proportional hazards regression analyses were used to calculate the HRs and 95% CIs.

\* P-trend was obtained by including the categories of fried food intake as a continuous variable in the model.

†The multivariable model was adjusted for age, sex, race, centers, BMI, household income, Townsend deprivation index, smoking, alcohol consumption, physical activity, history of hypertension, history of hyper cholesterol, family history of cardiovascular disease, family history of diabetes, vitamin supplement use, mineral supplement use, aspirin use, and diabetes duration.

‡ Lifestyle includes smoking status, alcohol consumption frequency, physical activity, and sleep pattern.

¶ Extreme energy intake was <800 or >4200 kcal/d for men and <600 or >3500 kcal/d for women.

|| Cardiometabolic diseases include type 2 diabetes, coronary heart disease, and stroke.

**Table S7. Multivariable Hazard Ratios (95% CIs) of fried potato consumption and obesity incidence from sensitivity analyses.**

Cox proportional hazards regression analyses were used to calculate the HRs and 95% CIs.

\* P-trend was obtained by including the categories of fried food intake as a continuous variable in the model.

†The multivariable model was adjusted for age, sex, race, centers, BMI, household income, Townsend deprivation index, smoking, alcohol consumption, physical activity, history of hypertension, history of hyper cholesterol, family history of cardiovascular disease, family history of diabetes, vitamin supplement use, mineral supplement use, aspirin use, and diabetes duration.

‡ Lifestyle includes smoking status, alcohol consumption frequency, physical activity, and sleep pattern.

¶ Extreme energy intake was <800 or >4200 kcal/d for men and <600 or >3500 kcal/d for women.

|| Cardiometabolic diseases include type 2 diabetes, coronary heart disease, and stroke.

**Table S8. Multivariable Hazard Ratios (95% CIs) of fried white consumption and obesity incidence from sensitivity analyses.**
