**Table S2:** Measured total soil concentrations and internal Ag concentrations in the organisms (AV  $\pm$  SE) measured at the end of each generation, so at days 32, 64, 96, 128, 160, 194 and 224 of the multigenerational tests with *Enchytraeus crypticus* in LUFA 2.2 soil spiked with AgNO<sub>3</sub> (45 and 60 mg Ag/kg soil DW) and Ag NM300K (20 and 60 mg Ag/kg soil DW). Also shown are the generation and effect level of exposure. [% Recovery]: recovery of Ag in the spiked soils compared to nominal concentrations of AgNO<sub>3</sub> and Ag NM300K. F5 and F6 were exposed to clean soil.
