## Photothermal Conversion Efficiency

The photothermal conversion efficiency was calculated according to a previous method<sup>1</sup>. The calculations on the cluster **I** is shown as an example. Details are as follows:

Based on the total energy balance for this system:

$$\sum_i m_i C_{p,i} \frac{dT}{dt} = Q_s - Q_{loss}$$

where  $m_i$  (0.81 g) and  $C_{p,i}$  ( $0.8 \text{ J (g } ^\circ\text{C)}^{-1}$ ) are the mass and heat capacity of system components (Cluster **I** and quartz glass), respectively.  $Q_s$  is the photothermal heat energy input by irradiating **I**, and  $Q_{loss}$  is thermal energy lost to the surroundings. When the temperature is maximum, the system is in balance.

$$Q_s = Q_{loss} = hS\Delta T_{max}$$

where  $h$  is heat transfer coefficient,  $S$  is the surface area of the container,  $\Delta T_{max}$  is the maximum temperature change. The photothermal conversion efficiency  $\eta$  is calculated from the following equation:

$$\eta = \frac{hS\Delta T_{max}}{I(1 - 10^{-A_{400}})}$$

where  $I$  is the laser power ( $0.831 \text{ W cm}^{-2}$ ) and  $A_{400}$  is the absorbance of **I** at the wavelength of 400 nm (0.91).

In order to obtain the  $hS$ , a dimensionless driving force temperature,  $\theta$  is introduced as follows:

$$\theta = \frac{T - T_{surr}}{T_{max} - T_{surr}}$$

where  $T$  is the temperature of **I**,  $T_{max}$  is the maximum system temperature ( $82.5 \text{ }^\circ\text{C}$ ), and  $T_{surr}$  is the initial temperature ( $26.5 \text{ }^\circ\text{C}$ ).

The sample system time constant  $\tau_s$

$$\tau_s = \frac{\sum_i m_i C_{p,i}}{hS}$$

$$\text{thus } \frac{d\theta}{dt} = \frac{1}{\tau_s} \frac{Q_s}{hS\Delta T_{max}} - \frac{\theta}{\tau_s}$$

when the laser is off,  $Q_s = 0$ , therefore  $\frac{d\theta}{dt} = -\frac{\theta}{\tau_s}$ , and  $t = -\tau_s \ln \theta$

so  $hS$  could be calculated from the slope of cooling time vs  $\ln \theta$ . Therefore,  $\tau_s$  is 121.26 s (Figure S9) and the photothermal conversion efficiency  $\eta$  is 41.1%.
