### Table of Contents

**Table S1.**  $q_m$  values of different types of MPs towards Pb<sup>2+</sup> ions

**Figure S1.** EDS spectra

**Figure S2.** Nyquist plot of blank (DI water)

**Table S2.** Tentative fitting parameters obtained for blank (DI water)

**Figure S3.** Calibration curve reporting  $(1/R_{dl})$  vs. microplastic concentration

**Table S3.** Fitting parameters obtained for PS and PS-COOH MPs using circuit 1

**Table S4.** Fitting parameters obtained for PS and PS-COOH MPs pre- and post- adsorption of Pb<sup>2+</sup> ions using circuit 1

**Table S5.** Langmuir and Freundlich isotherm parameters for the Pb<sup>2+</sup> ions adsorption onto PS\* MPs from aqueous solutions containing NaNO<sub>3</sub> 0.1 mol L<sup>-1</sup>, at pH = 5.0 and at  $T = 298.15$  K

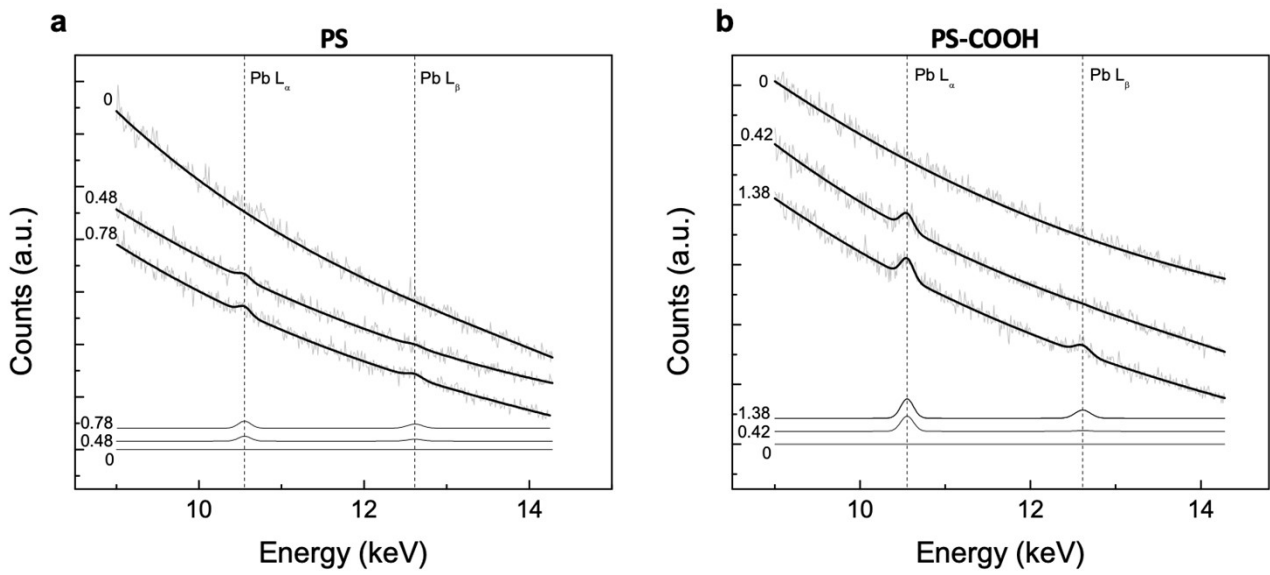

**Figure S4** Adsorption isotherms of Pb<sup>2+</sup> ions onto PS (blue triangles) and PS\* (red circles) MPs from aqueous solutions containing NaNO<sub>3</sub> 0.1 mol L<sup>-1</sup>, at pH = 5.0 and  $T = 298.15$  K, and onto PS\* MPs (black squares) from aqueous solutions containing NaNO<sub>3</sub> 0.1 mol L<sup>-1</sup>, SDS 0.1 mmol L<sup>-1</sup>, at pH = 5.0 and  $T = 298.15$  K. The experimental data were fitted with Langmuir (continuous line) and Freundlich (dotted line) isotherm models

**Figure S5.** Micrograph of PS\* MPs

**Table S1.**  $q_m$  values of different types of MPs towards  $Pb^{2+}$  ions.
