Binary Conformers of a Flexible, Long-chain Fluoroalcohol: Dispersion

Controlled Selectivity and Relative Abundances in a Jet

Tao Lu,^{a,b} Fan Xie,^{a,c} Nathan A. Seifert,^{a,d} Reihaneh Hamidi Mejlej,^a Wolfgang Jäger,^a and Yunjie Xu^{†a}

^a ΔE and ΔE_0 denote the raw and ZPE corrected relative energies (in kJ mol⁻¹), respectively. and A , B , and C are the rotational constants (in MHz). $|\mu_g|$ ($g = a, b, c$) are the magnitudes of the electric dipole moment components (in Debye).

^bFor conciseness, we do not add energy ordering ranks to conformers after **XIV**.

^a ΔE and ΔE_0 denote the raw and ZPE corrected relative energies (in kJ mol⁻¹), respectively. and *A*, *B*, and *C* are the rotational constants (in MHz). $|\mu_g|$ (*g* = *a*, *b*, *c*) are the magnitudes of the electric dipole moment components (in Debye).

Table S5. Theoretical spectroscopic parameters of the sixteen conformers of the TFB dimer calculated at the MP2/6-311++G(2d,p) level of theory.^a

	B2PLYP-D3BJ/def2-TZVP	518.8(-0.2%)	306.9(-0.6%)	231.0(-0.8%)	0.5%

^a The values in parentheses are percentage differences defined as: 100% × (experimental - theoretical)/experimental.

^b Average absolute percentage error for each level.

Table S12. The decomposition of total interaction energies in kJ mol^{-1} at the SAPT2+(3)/aug-cc-pVDZ level for the six aliphatic alcohol homodimers as well as water homodimer.

	Electrostatics	Induction	Dispersion	Exchange	Total
TFB-I	-58.6(50%) ^a	-19.5(17%)	-38.3(33%)	78.4	-38.0
TFB-II	-49.8(50%)	-17.9(18%)	-32.0(32%)	66.2	-33.5
TFB-IV	-49.1(49%)	-17.0(17%)	-34.2(34%)	68.1	-32.1
TFB-V	-46.8(51%)	-15.4(17%)	-30.3(33%)	62.9	-29.5
TFB-XIII	-48.8(49%)	-17.2(17%)	-33.4(34%)	65.4	-34.0
Methanol dimer ^b	-40.1(59%)	-14.0(20%)	-14.4(21%)	46.8	-21.6
Ethanol dimer ^b	-44.3(55%)	-15.3(19%)	-20.9(26%)	54.7	-25.9
2-Fluoroethanol dimer ^b	-65.6(56%)	-20.6(18%)	-30.7(26%)	84.9	-32.0
TFE dimer ^b	-45.2(54%)	-15.8(19%)	-23.3(28%)	55.2	-29.0
TFP dimer ^b	-56.2(54%)	-20.3(19%)	-27.8(27%)	67.6	-36.7
Water dimer	-35.7(63%)	-11.1(20%)	-9.4(17%)	37.5	-18.6

^a Number in parenthesis refer to the percentage contribution of electrostatic, induction, and dispersion terms to the total attractive interactions.

^b Only the most stable conformers are considered for these five alcohol homodimers.

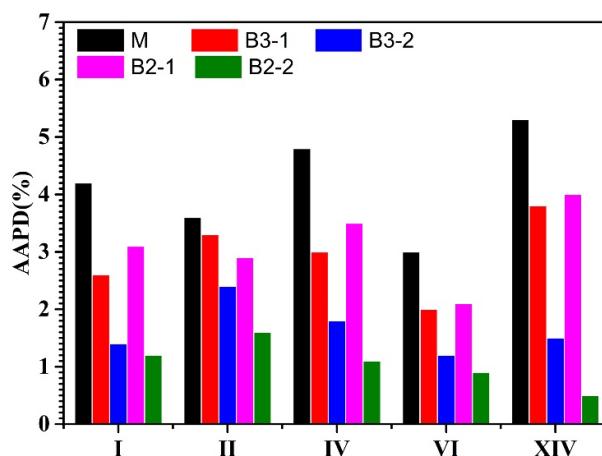

Figure S1. Average absolute percentage deviations (AAPD) between experimental rotational constants (A_0 , B_0 , and C_0) and theoretical values (A_e , B_e , and C_e) calculated at the MP2/6-311++G(2d,p) (M), B3LYP-D3BJ/6-311++G(2d,p) (B3-1), B3LYP-D3BJ/def2-TZVP (B3-2), B2PLYP-D3BJ/6-311++G(2d,p) (B2-1), and B2PLYP-D3BJ/def2-TZVP (B2-2) levels for the five observed TFB dimeric conformers.

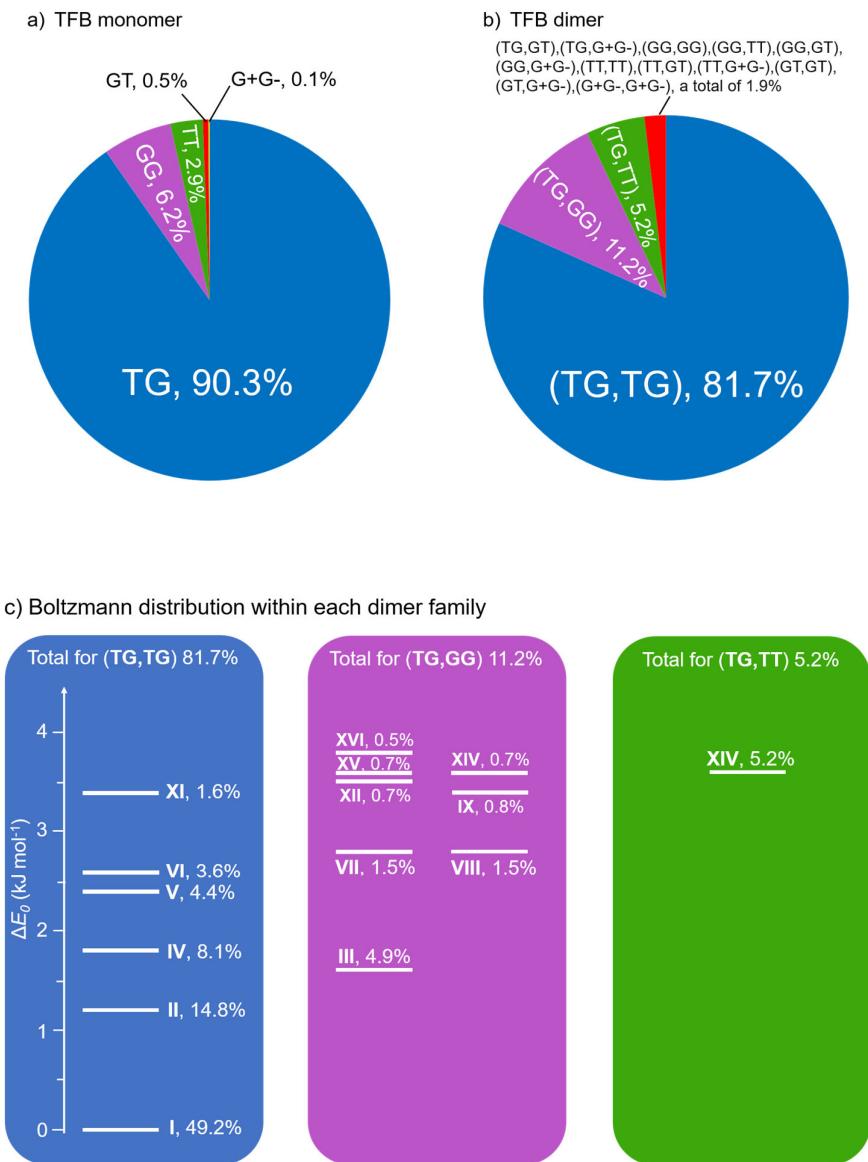

Figure S2. The modified kinetic-thermodynamic model for conformational abundances of the conformers of the TFB dimer in a jet. a) Boltzmann's percentage abundances of the five monomeric TFB families at a temperature of 120 K; b) The percentage abundances of the 15 TFB dimer families based on a kinetic controlled model and the available abundances of the five monomeric TFB families shown in a); c) The 16 most stable conformers in Table 1 are grouped into three TFB dimer family based on their constituents. The relative abundances of binary conformers within each TFB dimer family are calculated based on the Boltzmann distribution at a temperature of 120 K. The final percentage abundance values given take into account of both the Boltzmann distribution within a binary TFB family and the abundances of the specific family. Please see the discussions in the main text. For the predicted percentage abundances of I:II:IV:V:XIII, 60%:18%:10%:6%, reported in the main text, we simply re-normalized the percentages of these five observed conformers.

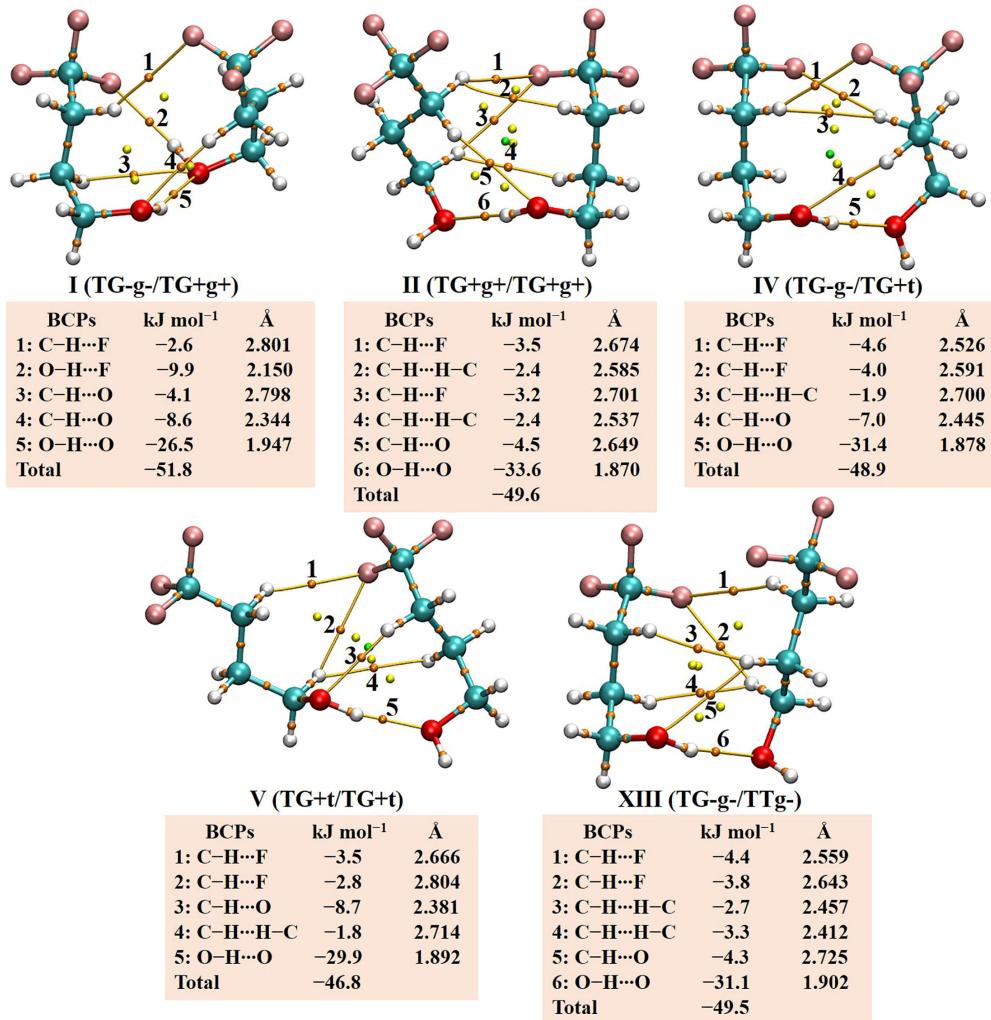

Figure S3. The QTAIM analysis results for the five observed conformers of TFB dimer. The orange and yellow dots indicate the bond critical points and ring critical points, and the green dots denote the cage critical points. The gold lines represent the bond paths. The energetic values of all the NCIs and the corresponding bond distance obtained at the B2PLYP-D3BJ/def2-TZVP level are also given.

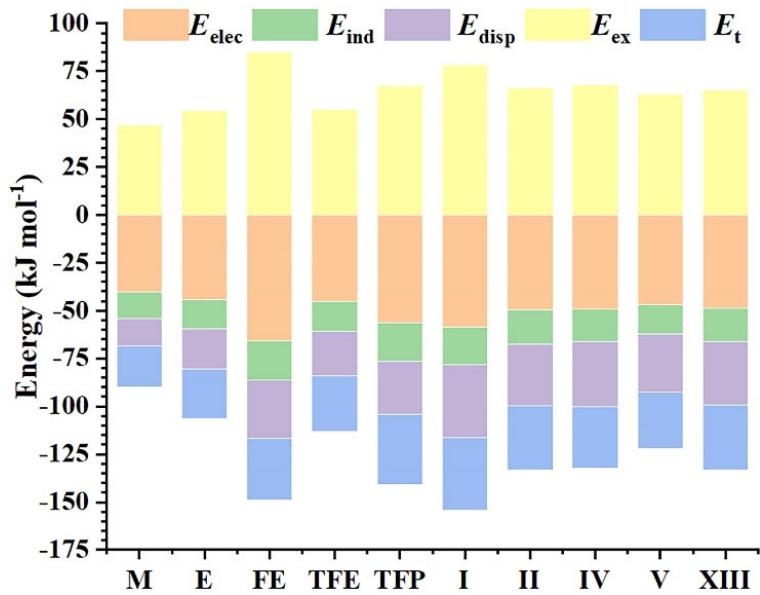

Figure S4. Comparison of the SAPT decompositions of total interaction energy for the most stable conformers of the methanol (M), ethanol (E), 2-fluoroethanol (FE), 2,2,2-trifluoroethanol (TFE), 3,3,3-trifluoro-1-propanol (TFP) dimers with the five observed conformers of TFP dimer, at their respective B3LYP-D3BJ/def2-TZVP geometries.
