(b) Initial reaction rate of $\text{Cu}_{0.18}\text{Ru}_{0.05}\text{CeO}_z$ (red), $\text{Cu}_{0.18}\text{CeO}_z$ (blue), and $\text{Ru}_{0.04}\text{CeO}_z$ (green). The reaction was carried out by using four different autoclaves at 423 K and stopped at 15, 30, 45, and 75 min. Each reaction was performed three times to obtain the error bars. $\text{Cu}_{0.18}\text{CeO}_z + \text{Ru}_{0.04}\text{CeO}_z$ was obtained by physically mixing the two catalysts together.

Benzonitrile production rates were calculated by (amount of benzonitrile produced, mmol)/(catalyst weight, g)/(reaction time, min).

Reaction conditions: Benzyl alcohol (1.93 mmol), toluene (1.0 mL), dodecane (internal standard; 0.07 mL), NH_3 (0.32 MPa), O_2 (1.0 MPa), 423 K. Mass balance was over 0.9 at this experiment. $\text{Cu}_{0.18}\text{Ru}_{0.05}\text{CeO}_z$ (14.7 mg), Ru/Cu/alcohol/dodecane = 1/3.5/500/500. $\text{Cu}_{0.18}\text{CeO}_z$ (14.3 mg), Cu/alcohol/dodecane = 1/150/150. $\text{Ru}_{0.04}\text{CeO}_z$ (15.3 mg), Ru/alcohol/dodecane = 1/500/500.
