Figures S20-S23. HRMS spectra	S13

**Table S1** Intramolecular Bond lengths (in Å) in the following proligands: **2**, **3**, **4** and **5**.

Bonds	<b>2</b>	<b>4</b>	<b>5</b>	Bonds	<b>3</b>
	X = S	X = Si	X = C		X = Si
C—X	1.761(4)	1.874(2)	1.390(3)	C—X	1.883(3)
	1.765(4)	1.875(2)	1.390(4)		1.883(3)
C=C	1.336(6)	1.354(2)	1.397(4)	C=C	1.354(4)
C—S	1.745(4)	1.749(2)	1.747(3)	C—S	1.748(3)
	1.745(4)	1.751(2)	1.750(3)		1.744(3)
S—C	1.785(4)	1.769(2)	1.774(3)	S—C	1.728(3)
	1.780(4)	1.768(2)	1.778(3)		1.728(3)
C=O	1.211(5)	1.208(2)	1.200(3)	C=S	1.652(3)

If we compare the bond lengths of the proligands within the bisdithiole-2-one series, compounds **2**, **4** and **5**, besides the expected changes in the bond lengths of C—X (X = S, Si and C), the main difference is observed in the C=C bond, of the dithiole ring. Indeed, the shortest one is for the dithiine **2** and the longest for the aromatic ring of the benzo-fused **5**.

**Table S2** Significant bond lengths (Å) and angles (°) of **Cp<sub>2</sub>MoS<sub>2</sub>** and **Cp<sub>2</sub>MoS<sub>2</sub>CO**

Bonds	<b>Cp<sub>2</sub>MoS<sub>2</sub></b>	Bonds	<b>Cp<sub>2</sub>MoS<sub>2</sub>CO</b>	
			<b>Mo1</b>	<b>Mo2</b>
		C=O	1.208(13)	1.206(17)
		C—S	1.761(11)	1.765(11)
S—S	2.055(3)			1.766(11)
S—Mo	2.459(2)	S—Mo	2.457(3)	2.454(3)
	2.455(3)		2.457(3)	2.458(3)
	49.4(1)		70.5(1)	70.6(1)

The **Cp<sub>2</sub>MoS<sub>2</sub>CO** crystallizes in the monoclinic system, space group *Cc* and the unit cell contains two crystallographically independent molecules, both in general position. The **Cp<sub>2</sub>MoS<sub>2</sub>** crystallizes in the orthorhombic system, space group *P2<sub>1</sub>2<sub>1</sub>2<sub>1</sub>* and the unit cell contains one crystallographically independent molecule in general position. The two **Cp<sub>2</sub>MoS<sub>2</sub>CO** complexes present similar bond lengths but the shape of the metallacycles MoS<sub>2</sub>C is different as the one with Mo1 is slightly distorted along the S---S axis by 4.3(4)° and the one with Mo2 is planar. On the other hand, the S—Mo—S angle decreases significantly with the size of the metallacycle since it goes from 82.4° in the five membered ring of **Modt** to 70.6° in the four membered ring in **Cp<sub>2</sub>MoS<sub>2</sub>CO** to reach 49.4° in the 3 membered ring of **Cp<sub>2</sub>MoS<sub>2</sub>**.
